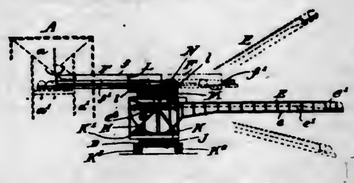
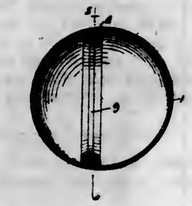
1,346,988. WORK HOLDER AND GUIDE FOR SEWING-MACHINES. ABRAHAM STEIN, Boston, Mass. Filed Feb. 23, 1918. Serial No. 218,684. 8 Claims. (Cl. 112—136.)



1. A sewing machine having, in combination, a work support having a groove formed transversely thereof, work feeding means adjacent to said groove, a slide mounted in said groove, adapted to be moved longitudinally thereof by said work feeding means, and a clamp member mounted upon said slide adapted to engage the edge of the work being stitched and hold said work on said slide.

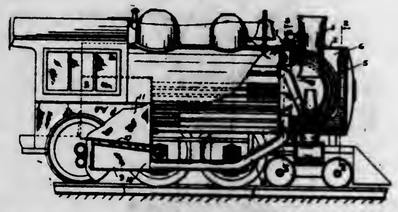
1,346,989. PUMP. FRANK STOKLOSA, Chicago, Ill. Filed Jan. 21, 1920. Serial No. 353,000. 1 Claim. (Cl. 103—62.)

A lift pump of the type described comprising a pump cylinder, a piston reciprocable within said cylinder and means for raising and lowering said piston, said means including a lever beam pivoted above the pump cylinder, an angle extension carried by one end of the lever beam, a piston rod carried by the piston, a flexible connection between the lever extension and piston rod, a plurality of sprocket wheels rotatably supported upon the pump cylinder, a sprocket chain passing over said sprocket wheels and connected to said lever and means for operating the wheels to oscillate the lever beam to raise and lower the piston in the cylinder.



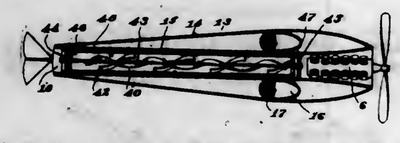
1,346,990. CONVEYING APPARATUS. FRANCIS LEE STUART, New York, N. Y. Filed Aug. 15, 1919. Serial No. 317,680. 4 Claims. (Cl. 198—3.)

3. The combination with a series of bins, of a truck mounted to move from bin to bin, a boom conveyor mounted on the truck to turn about both vertical and



horizontal axes and discharging at its outer end, an endwise adjustable conveyer, a frame in which it is mounted and which is supported by the truck above the boom conveyer, said endwise adjustable conveyer being constructed to deliver to the boom conveyer in a fixed vertical plane relatively to the supporting truck substantially as described.

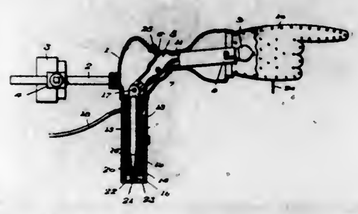
1,346,991. RUBBER BALL. GEORGE MICKLE TATUM, Media, Pa. Filed Jan. 22, 1920. Serial No. 353,173. 2 Claims. (Cl. 46—4.)



1. An elastic ball of the class described having a metallic strip situated interiorly thereof and means for holding said strip to one side of the center of said ball.

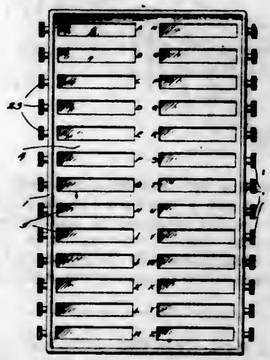
1,346,992. AIR-PREHEATER FOR FURNACES. MAX M. TENESCH, Kelso, Calif. Filed Aug. 28, 1919. Serial No. 320,464. 1 Claim. (Cl. 110—57.)

In combination with a steam locomotive, a cold air collecting box in the upper part of the smoke box, a hot air collecting box in the lower part of the smoke box, a plurality of spaced tubes connecting said cold air collecting box and said hot air collecting box, said tubes curving forwardly and to the sides of the stack and the exhaust nozzle out of the path of the smoke from the fire box, and the steam from the exhaust, to the stack.



1,346,993. TUBULAR FUSELAGE. JOHN TALIAFERRO THOMPSON, Newport, Ky., assignor of one-half to Thomas F. Ryan, New York, N. Y. Filed June 30, 1919. Serial No. 307,740. 11 Claims. (Cl. 244—25.)

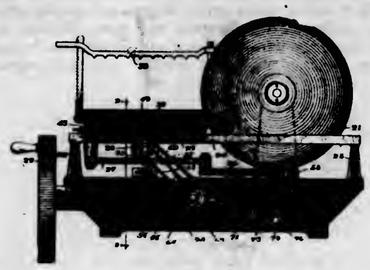
1. In an air-craft, a fuselage comprising an outer shell, and an inner shell, said shells being so arranged as to provide a longitudinal air-duct through said fuselage, and a cockpit disposed in the space between said shells.



1,346,994. SIGNAL. FRANK HENRY THONE, Bingham Canyon, Utah. Filed Mar. 3, 1919. Serial No. 280,291. 1 Claim. (Cl. 177—329.)

A signal device embodying a casing having a sleeve depending therefrom, a lever pivoted within the casing and having a signal arm, said signal arm being adapted to swing downwardly adjacent to said sleeve and having a keeper to project under the lower end of the sleeve when the signal arm is adjacent to said sleeve, a solenoid coil on the sleeve, a tubular casing surrounding said coil and sleeve, a latch pivoted to and extending across the lower end of said sleeve within the tubular

casing and having a portion to move downwardly and drop into engagement with said keeper, and a pair of cores slidable within the opposite ends of said sleeve, the upper core being connected to said lever, and the lower core engaging said latch so that when the cores move toward one another in the sleeve they will raise and withdraw the latch from said keeper and swing the lever to raise the signal arm away from said sleeve.



1,346,995. DIRECTORY. WARD JOHN TOLAND, Dannemora, N. Y. Filed Dec. 5, 1918. Serial No. 265,375. 2 Claims. (Cl. 40—86.)

1. In a device of the class described, the combination of a casing having guide strips therein, independent indicating units insertible in said casing and comprising plates connected by rods, shafts carred by said plates and having rollers thereon, sleeve rollers carried by a plurality of said rods, a belt connected to said rollers and passing around said sleeve, rollers, said plates being engaged by said strips for holding said units against accidental shifting although permitting the same to be removed from the casing when necessary, and means insertible into said casing for engagement with said shafts and turning the same whereby said rollers may be rotated for moving said belt.

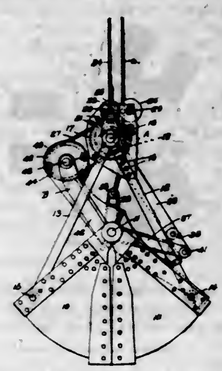
1,346,996. SLICING-MACHINE. CORNELIS F. M. VAN BERKEL, Laporte, Ind., assignor to U. S. Slicing Machine Company, Laporte, Ind., a Corporation of Indiana. Filed July 12, 1917. Serial No. 180,051. 26 Claims. (Cl. 17—24.)

4. In a slicing machine, a table, a support for material to be sliced movably mounted on said table, means for feeding said support relative to said table, and means for automatically disconnecting said support from said feeding means when said support reaches a given posi-

tion and for again connecting said support automatically with said feeding means when said feeding means is operated in a reverse direction.

1,346,997. FEED-SCREW. CORNELIS F. M. VAN BERKEL, Laporte Ind., assignor to U. S. Slicing Machine Company, Laporte, Ind., a Corporation of Indiana. Filed Nov. 19, 1917. Serial No. 202,684. 13 Claims. (Cl. 74—40.)

1. In a combination, a screw, and a toothed member for engaging the threads of said screw, said toothed member having an inclined face arranged to coöperate with the threads of said screw to force said member out of mesh with said threads and having other teeth for driving engagement with said screw.



1,346,998. DENTAL APPLIANCE. THOMAS HERBERT VEALE, Camp Devens, Mass. Filed May 15, 1920. Serial No. 381,689. 5 Claims. (Cl. 32—6.)

1. In an impression device, inner and outer impression trays, the former being insertible and removably supported within the latter, said trays having sides and anterior flanges, means at the posterior portion of both trays for supporting the inner tray, means adjacent the anterior flanges to further support the inner tray, the sides of both trays and supporting means being in contact, and a water jacket between the bottoms of both trays, said jacket being made water-tight by introduction of impression material in the inner tray.

1,346,999. EXCAVATING-BUCKET. WILLIAM M. VENABLE, Pittsburgh, Pa., assignor to Blaw-Knox Company, a Corporation of New Jersey. Filed Oct. 19, 1918. Serial No. 258,843. 14 Claims. (Cl. 37—30.)

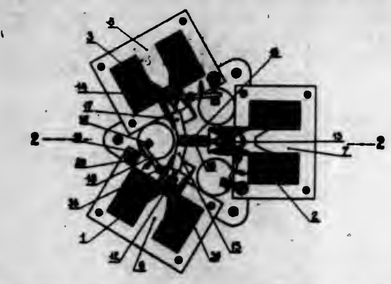
5. In a bucket, the combination of a pair of pivoted scoops provided with supporting corner members, bucket closing means including a closing line and a pair of sheave members, an auxiliary lever provided with a stop bar member, and a bucket head for the scoops comprising a block provided with a head pin common to and posi-

tioned to receive all of said members, part of said members rigidly secured to said pin and another part thereof adapted to turn on said pin.

1,347,000. APPARATUS AND ART FOR HANDLING COAL AND THE LIKE. EDWIN C. WASHBURN, Englewood, N. J., assignor of one-third to Robert S. Blair, South Orange, N. J. Filed July 18, 1918. Serial No. 245,577. 12 Claims. (Cl. 34—47.)

1. In thawing apparatus for coal and the like, in combination, a track portion, means inclosing the space about said track portion and adapted to retain heated air therein by its buoyancy, means adapted to heat said space, and a track portion inclined downwardly under said inclosing means and thence inclined upwardly to join said first track portion.

1,347,001. MACHINE FOR MAKING HAT-LININGS. GEORGE W. WEISS, New York, N. Y. Filed Dec. 31, 1917. Serial No. 209,724. 20 Claims. (Cl. 112—14.)

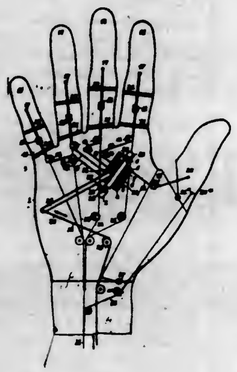


10. In a machine for making hat linings, the combination with a device for producing oval rotation, means for supporting the lining on said oval producing device, slides for changing the size and shape of the oval, controlling means acting simultaneously on the slides, and means for locking said controlling means, substantially as shown and described.

1,347,002. ELECTRIC IMPULSION-MOTOR. MARIE EMILE ALFRED BAULE, Lyon, France. Filed May 1, 1919. Serial No. 294,060. 4 Claims. (Cl. 172—126.)

1. In an electric motor, comprising a crank shaft, a plurality of electromagnets arranged circumferentially about the crank shaft, the combination with each of the electromagnets of a core placed in each electromagnet, a resilient rod connecting each core to the crankshaft and normally holding said core in retracting position, a re-

sistance in series with the coil of each electromagnet for reducing the current through said electromagnet, a switch

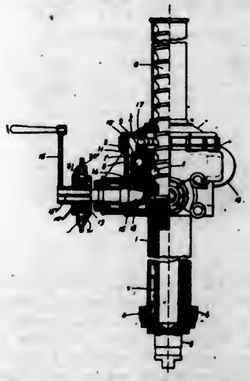


arranged so as to normally short circuit each resistance and a device to automatically open each switch when the corresponding core moves out of its retracted position.

1,347,003. BLADE FOR FLUID-PRESSURE TURBINES. KARL BAUMANN, Urmston, and HENRY LEWIS GUY and JOHN FREDERICK FRANKLAND WINNING, Manchester, England, assignors to The British Westinghouse Electric and Manufacturing Company, Limited, a Corporation of Great Britain. Filed Mar. 19, 1919. Serial No. 283,641. 3 Claims. (Cl. 253—78.)

1. A turbine blade having its major portion formed of a single thickness of sheet metal and its inlet edge formed of two thicknesses of metal.

1,347,004. ARTIFICIAL HAND. FRIEDRICH CONRAD BECK, Seuzach, near Winterthur, Switzerland. Filed Apr. 16, 1918. Serial No. 228,833. 4 Claims. (Cl. 3—12.)



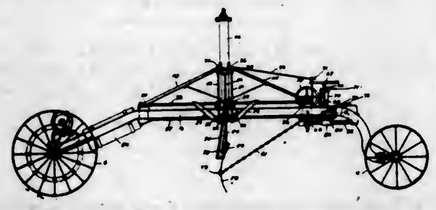
1. In an artificial hand, the combination with joined fingers thereof, of a series of pawls and ratchets located centrally of the artificial hand, connections attached to said fingers and to said pawls and ratchets, and a tensile connection attached to said pawls and ratchets, whereby the patient by energising said tensile connection, is able, by operating said pawls and ratchets to cause said fingers to hold the grasped article with an optional gripping pressure that is independent of the size or shape of the article to be held.

1,347,005. DEVICE FOR THE PREVENTION OF POCKET-PICKING. FRANCESCO BINI, Milan, Italy. Filed July 11, 1919. Serial No. 310,119. 2 Claims. (Cl. 116—84.)

1. In a protection device of the class described, an alarm carrying device comprising a tubular member adapted to carry a charge of detonating material; a detonator extending into said tubular member; a plug in one end of said tubular member for supporting said detonator; a second tubular member secured to said plug and into which the detonator extends; a latch in said second tubular member adapted to engage the end of the detonator and hold the same cocked; and a trigger in said second tubular member and extending to the outside thereof adapted to release said latch to permit the detonator to strike the detonating charge under the influence of a tensioned spring, when the trigger is operated.

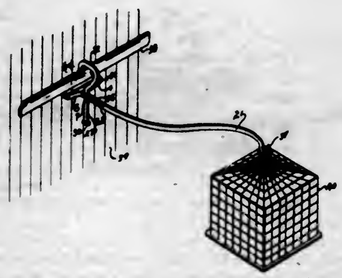
1,347,006. MECHANICAL SCREW-JACK. ANDRÉ BOAS, Paris, France, assignor to Societe Anonyme Des Engrenages Citroen, Paris, France, a Corporation of France. Filed Sept. 23, 1918. Serial No. 255,342. 2 Claims. (Cl. 254—103.)

1. A screw jack, comprising a screw, a coöperating rotary nut, an actuating mechanism, a casing therefor, said nut being anti-frictionally supported within said casing and having a passageway extending from the threads of the screw through to the peripheral face thereof, and a cylindrical member inclosing said nut, and forming the outer wall of the passage way and a manually actuated brake operating on said member.



1,347,007. OIL-BURNER. CARL E. BROWN, Columbus, Ohio. Filed Oct. 29, 1919. Serial No. 334,108. 1 Claim. (Cl. 158—64.)

A device of the class described comprising a casing, hoods on the casing and having vertically elongated openings; a U-shaped generator including a lower arm extended through the openings, and an upper arm disposed above the hoods, the lower arm being provided with combustion orifices located in the hoods; an arched support on the casing, the support being symmetrical with respect to a vertical plane and having seats located on opposite sides of said plane, the support being provided with an intermediate seat located between the side seats, the

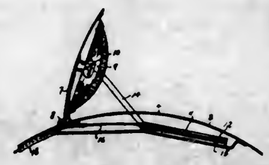


upper arm of the generator being received in the intermediate seat, and being movable to occupy either of the side seats, thereby effecting an axial rotation of the lower arm of the generator and causing the combustion orifices to discharge laterally in opposite directions, the vertical elongation of the openings in the hoods permitting the lower arm of the generator to rise, when the upper arm of the generator is moved out of the intermediate seat.

1,347,008. GRADING-MACHINE. EDGAR P. BROWN, Madera, Calif. Filed July 28, 1919. Serial No. 313,932. 4 Claims. (Cl. 37—49.)

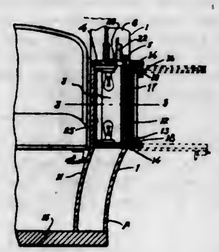
1. In a grading machine, the combination of a wheeled vehicle, a rotatable member mounted on said vehicle, rollers interposed between said vehicle and said rotatable member, a goose neck rigidly attached to said rotatable member, pneumatic cylinders vertically mounted at the outer ends of said goose neck, a scraper located beneath said vehicle, pistons mounted in said pneumatic cylinders, said pistons being connected to the opposite ends of said scraper and capable of independently raising and lowering the opposite ends of said scraper.

1,347,009. WALL-MOLDING HANGER FOR BIRD-CAGES, &c. ALLEN BURROWS, Los Angeles, Calif. Filed Aug. 26, 1919. Serial No. 319,989. 3 Claims. (Cl. 248—48.)



2. A wall molding hanger for bird cages and the like comprising a gripping bar adapted to engage a wall molding, an arm extending upwardly and outwardly from the gripping bar, an adjusting bar extending downwardly from the forward end of the arm, a brace, cushions upon the ends of the brace and adapted to engage a wall, means for adjusting and connecting the bar to the brace, and a supporting bar extending outwardly from the adjusting means.

1,347,010. PROCESS OF PRODUCING LITHOGRAPHIC INSERTS. JOHN H. BUSCHER, Washington, D. C. Filed Dec. 4, 1918. Serial No. 265,313. 5 Claims. (Cl. 41—41.5.)

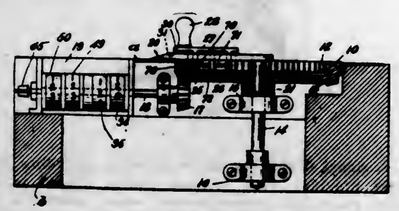


1. A process for producing lithographic inserts comprising marking out a predetermined outline upon a sensitive surface, coating all of said surface except the area defined by said outline, with a resist, and applying a design to the uncoated surface only by means of an inked impression member provided with the desired design.

1,347,011. SIGNAL. CARL T. COCHRAN, Houston, Tex. Filed July 14, 1919. Serial No. 310,703. 2 Claims. (Cl. 40—67.)

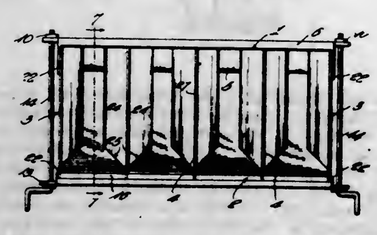
1. A signal device for motor vehicles, including wheel fenders provided with recesses, plates hinged to said fenders, translucid concavo-convex lenses secured to said plates, electric lights carried by the plates and inclosed by said lenses, said lenses being inclosed by said plates in said recesses, when the plates are lowered into contact with the fenders and means for lifting and lowering said plates.

1,347,012. ADVERTISING-CAR CONSTRUCTION. PEARL C. COLONY, Los Angeles, Calif. Filed July 15, 1919. Serial No. 310,997. 8 Claims. (Cl. 40—182.)



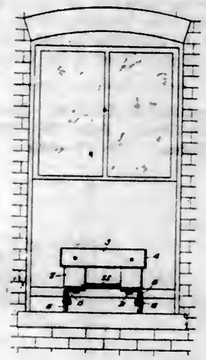
1. A car formed with the usual side wall including spaced uprights, windows being provided between the upper portions of the uprights and outer and inner sheathing being applied to the lower portions of the uprights, the wall being formed with a longitudinally extending series of outwardly facing hollow chambers arranged under the windows and between the uprights, transparencies at the outer sides of the chambers, and means within the chambers for illuminating the transparencies.

1,347,013. TOASTER. LLOYD G. COPEMAN, Flint, Mich. Filed Oct. 31, 1919. Serial No. 334,739. 7 Claims. (Cl. 219—19.)



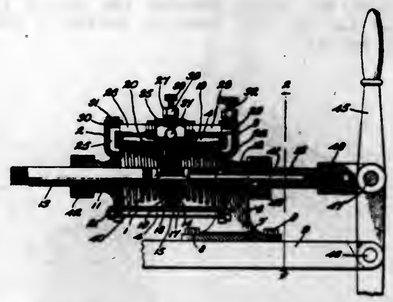
6. In a toaster, the combination of a base, a pair of end uprights provided with slotted bearing recesses, a pair of grids movably supported at the top of the end supports and pivoted together at the bottom, the said outer grid being also pivotally supported in the slotted bearing recesses of the end supports, and latches which may be moved over a portion of the outer grid to hold the grids releasably in the said slotted bearing recesses of the end supports.

1,347,014. TIME-COMPUTING APPARATUS. CYRUS CORLISS, Boston, Mass. Filed May 10, 1915. Serial No. 26,936. 1 Claim. (Cl. 235—61.)



In an apparatus of the character described, in combination, a casing provided with a top having in it a plurality of openings one of which is circular, a circular member provided with teeth and rotatable in said circular opening, a scale on the top of said casing provided with graduations corresponding in number to the teeth of said rotatable member, a totalizer located in said casing below the other of said openings and visible therethrough and comprising a plurality of rotatable members, means for connecting said toothed circular member with said totalizer, a rotatable pointer pivoted within the opening with which said scale coöperates and movable freely over said scale in either direction for more than a complete revolution and independently of said toothed circular member, and means for coupling any desired tooth of said pointer with said toothed member.

1,347,015. CORNER-BLOCK MOLD. FRANK CREASON, Richmond, Mo., assignor of one-half to William A. Mullin, Richmond, Mo. Filed Feb. 5, 1920. Serial No. 356,473. 3 Claims. (Cl. 25—121.)

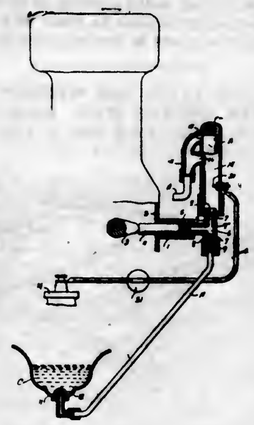


3. A cement block mold comprising a side plate stamped inwardly along its longitudinal center to form an internal rib, vertical bars spanning the inwardly stamped portion of said side plate and secured to the outer surface of the latter, a longitudinal bar secured to said vertical bars and extending beyond the ends of said side plates, a second side plate, a second longitudinal bar secured to the outer surface of said second side plate and extending beyond the ends thereof, spacing plates secured to the inner surface of said second side plate, inwardly extending stop flanges on the ends of the two side plates, end and partition members extending between said side plates and provided at one end with notches receiving the rib of said first named side plate, said end members abutting said stop flanges and certain of said spacing plates, and said partition members being received between the other spacing plates, and tie rods extending between the projecting ends of said first and second named longitudinal bars.

1,347,016. WINDOW-SEAT. DAVID F. CROWE, Latrobe, Pa. Filed Mar. 8, 1920. Serial No. 364,087. 2 Claims. (Cl. 304—27.)

1. A window seat comprising a seat having forwardly extending arms adapted to extend transversely of the sill, a bar for engaging the inner face of the sill adjustably connected with the arms, and adjustable legs connected with the arms between the bar and the seat, each arm having at the end remote from the seat a depending portion, and a bar of a length to extend beyond the window frame at each end and adjustably connected with the depending portions.

1,347,017. FLUID-CHECKING DEVICE. NELSON E. DAVIES, Redwood City, Calif. Filed Sept. 19, 1919. Serial No. 325,042. 4 Claims. (Cl. 188—97.)

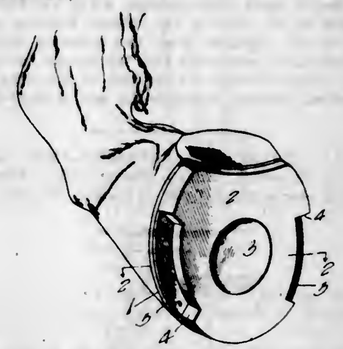


2. In a device of the class described the combination of a cylinder; a head closing each end of said cylinder, each of said heads being provided with a restricted passage; a check valve comprising a casing having a recess, a ball and means adapted to positively hold said ball in said recess, and to prevent it from entering therein at will; connections between said casing and each of said passages; a piston mounted in said cylinder; a piston rod carrying said piston; and springs coacting with said piston to normally maintain the same in a central position in said cylinder, substantially as described.

1,347,018. TREAD ATTACHMENT FOR TRACTOR-WHEELS. JOSEPH C. F. DICK, Stockton, Calif. Filed Aug. 28, 1919. Serial No. 320,327. 4 Claims. (Cl. 21—215.)

4. A flexible tread attachment for tractor wheels comprising in combination with vertical flanges on the outer periphery and edges of the wheel, the flanges being provided with spaced interstices, suspending members in such interstices, chains between the flanges and arranged in transverse and diagonal order around the periphery of the wheel, and cone shaped members having their points projecting outwardly positioned between adjacent diagonal and transverse chains and adapted to be secured thereto.

1,347,019. LUBRICATING MECHANISM. LAKE B. EDWARDS, Anniston, Ala. Filed Aug. 13, 1919. Serial No. 317,260. 6 Claims. (Cl. 184—6.)



5. A lubricating mechanism comprising a chamber provided with an outlet, means for forcing lubricant through the chamber and outlet, relatively movable contact members carried by the chambers, said contact members being maintained separated by the pressure of the lubricant passing through the chamber, one of said contact members moving by gravity into engagement with the second contact member upon reduction of pressure of the lubricant passing through the chamber and expansible means coacting with said first named contact member for imparting movement to said contact member in a direction toward the second contact member upon reduction of the pressure of the lubricant passing through the chamber, said expansible member being placed under compression by said first named contact member when separated from the second named contact member by the pressure of the lubricant passing through the chamber.

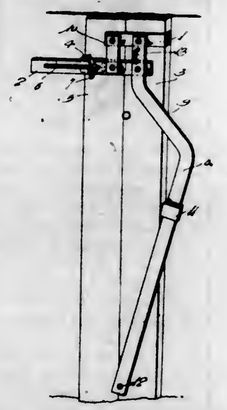
1,347,020. PAPER TOWEL. ARVID EK, PORTLAND, Me. Filed May 31, 1919. Serial No. 300,817. 1 Claim. (Cl. 92—68.)

A paper towel formed of wood fiber digested with sulfate of soda leaving a small quantity of saponified resin in the interstices of the paper.

1,347,021. HORSESHOE. THADDEUS S. FIELD, Atlanta, Ga. Filed Nov. 10, 1919. Serial No. 336,943. 1 Claim. (Cl. 168—28.)

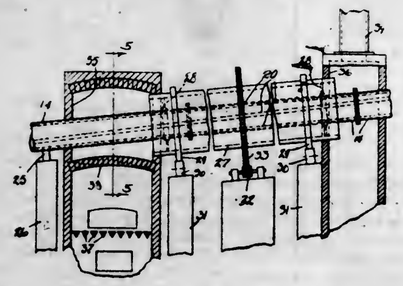
A cushion horseshoe or other shoe adapted, when being applied to a hoof, to adjust itself to conform to the shape of the hoof; said shoe comprising a backing sheet of tough flexible non-resilient material adapted to fit next to the bottom of the hoof and being shaped to conform to the contour thereof; a cushion block of flexible resilient material fastened flat against the lower side of said sheet and having its contour shaped to conform to the contour of said sheet, except at its side edges where it is provided with arcuate cutaway portions, the central portion of the lower surface of said block having a recess therein; and flat arcuate attaching plates of stiff material disposed in said cutaway portions and fitting flat against the lower side of said sheet, said plates being adapted to receive and to carry securing elements by which the shoe may be attached to the hoof, the thickness of said plates being considerably less than the thickness of said block so that said plates will not contact with the ground or paving.

1,347,022. GAGE DEVICE. JOHN J. FITZGERALD, Los Angeles, Calif. Filed Apr. 5, 1919. Serial No. 287,877. 4 Claims. (Cl. 73—111.)



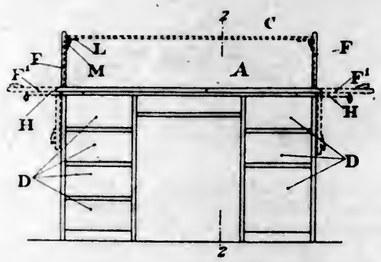
1. A fluid pressure gage including a tubular terminal fitting, a hollow body member carried by the terminal fitting and having an opening therein, a slidable indicator rod normally housed within the hollow body member and adapted to be projected outwardly through the opening of the body member, said indicator rod being formed with a scale which coöperates with the body member to indicate pressure and being frictionally engaged by the edges of the opening to hold it against accidental movement, a plunger slidable within the terminal fitting and extending

into the hollow body member for engagement with the indicator rod to project the same through the opening of the hollow body, an exterior flange upon the plunger, and a spring surrounding the indicator rod and interposed between the said flange of the plunger and the walls of the hollow body to resist the movements of the plunger.



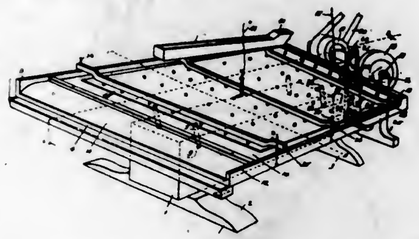
4. A combination tire pressure and cylinder compression gage, including a tubular terminal head provided exteriorly with a plurality of threaded portions which are of different diameters and provided for engagement with different sizes of spark plug openings, a tire valve-engaging seat fitted in the bore of the tubular head, a plunger slidable in the terminal head, and pressure indicating means operatively associated with the plunger for indicating the interior pressure of the tire or the compression of the engine cylinder, to which the gage is applied.

1,347,023. ADJUSTABLE BATTEN-CLAMP. EDWARD GEE and ROBERT L. BURNS, Denver, Colo. Filed Nov. 13, 1919. Serial No. 337,899. 6 Claims. (Cl. 144—289.)



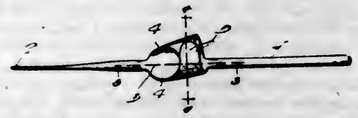
1. A clamp of the type specified comprising clamping jaws for holding two opposed battens together, an actuating lever for the jaws, means carried by the lever to permit a brace to be detachably connected thereto, and means carried by and longitudinally shiftable on the lever for retaining it in effective position when said last named means is permitted to engage one edge of one of the battens.

1,347,024. APPARATUS FOR TREATING SILICATES. WALTER GLAESER, Fullerton, Pa., assignor, by mesne assignments, to Potash Extraction Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 19, 1917. Serial No. 192,182. 2 Claims. (Cl. 263—34.)



1. In apparatus of the character described, the combination of a stationary furnace chamber, a stationary stack chamber spaced therefrom, a rotary tubular shell connecting and affording communication between said chambers, a kiln mounted in said shell and extending through said chambers and projecting beyond the front wall of said furnace chamber, and receiving means associated with the projecting end of said kiln beyond the wall of the furnace chamber.

1,347,025. DESK. JEAN MARIE GLOPPE, Lyon, France. Filed Jan. 23, 1920. Serial No. 353,410. 1 Claim. (Cl. 45—92.)



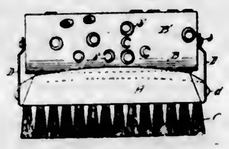
A flat top desk having faces on opposite sides, a well arranged substantially midway between said faces, a flexible cover, arranged, when in open position, in said well, and end wall members hingedly connected to the ends of the desk and foldable thereagainst, said members, when extended above the top of the desk forming guides for said flexible cover and coacting therewith to form a complete cover thereover, said members having grooves on their inner sides for the reception of the ends of the cover and also having guard molding on their inner sides, said cover having projections to coact with said molding to lock the said members in upright position.

1,347,026. APPARATUS FOR EXTRACTING METAL FROM ORES AND THE LIKE. HAROLD H. GODFREY, Los Angeles, Calif. Filed Aug. 4, 1919. Serial No. 315,272. 10 Claims. (Cl. 204—15.)

1. An apparatus for extracting metal from ore including an ore concentrating shaking table inclined longitudinally and tranversely, said table being covered with a cathode, and an anode spaced above said cathode.

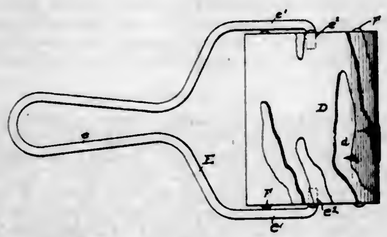
1,347,027. CROCHET-NEEDLE. ISAAC GREEN, Manchester, N. H. Filed Apr. 25, 1918. Serial No. 230,761. 1 Claim. (Cl. 66—17.)

A crochet needle thinned between its ends for a distance substantially equal to the length of the first joint



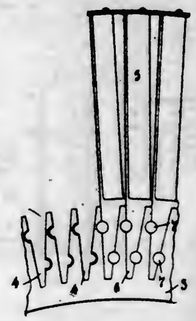
of a person's forefinger, a pair of thin resilient wings extending oppositely from and integral with said thinned part of the needle, said wings and said thinned part being jointly curved to form a finger receiving thimble whose axis is oblique to the needle, said wings being of a width at their inner ends substantially equal to the length of said thinned part of the needle and decreasing in width toward their outer ends, said outer ends slidably overlapping, being free of connection with each other, and being rounded to prevent catching of thread thereon.

1,347,028. PROCESS OF GRAINING. PAUL A. GSTALDER, Pittsburgh, Pa., assignor to The Ohio Varnish Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 18, 1919. Serial No. 304,984. 6 Claims. (Cl. 41—26.)



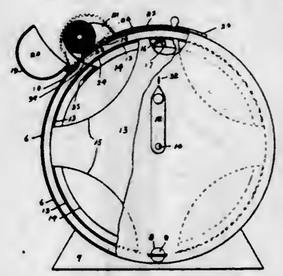
1. The process of graining comprising applying graining compound to a surface, removing certain regions of the compound, and then applying additional compound to certain regions of the untreated compound.

1,347,029. GRAINING-TOOL. PAUL A. GSTALDER, Pittsburgh, Pa., assignor to The Ohio Varnish Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 18, 1919. Serial No. 304,985. 1 Claim. (Cl. 41—5.5.)



A graining tool comprising a roller having projections, in the form of non-concentric, suctorial, elastic rings, irregularly grouped over its surface.

1,347,030. GRAINING-TOOL. PAUL A. GSTALDER, Pittsburgh, Pa., assignor to The Ohio Varnish Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 20, 1919. Serial No. 305,571. 6 Claims. (Cl. 41—5.5.)

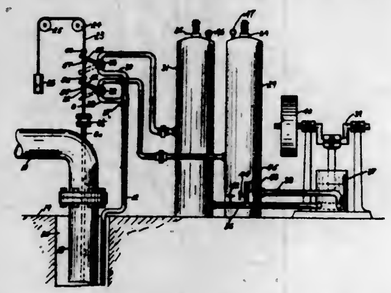


1. In a graining tool, the combination of a roller having projections on its surface, and means for enabling the roller to rotate freely or to be held against rotation as desired.

1,347,031. ATTACHMENT OF MOVING BLADES OF ELASTIC-FLUID TURBINES. HENRY LEWIS GUY, Manchester, England, assignor to The British Westinghouse Electric and Manufacturing Company Limited, a Company of Great Britain. Filed Jan. 31, 1917. Serial No. 145,630. 4 Claims. (Cl. 253—77.)

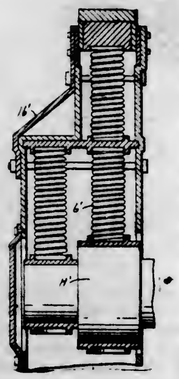
1. In combination with a turbine rotor provided with an axially extending tapered slot having its greatest circumferential width at its outer end, a blade having a tongue tapered to correspond with said slot, and two securing pins for the blade passing half through said tongue and half through the walls of said slot and located in different pitch circles.

1,347,032. FILM-DEVELOPING DEVICE. WINSLOW A. HAMMOND and JAMES HAMMOND, Randolph, Nebr.; Metta Hammond administratrix of said Winslow A. Hammond, deceased. Filed Feb. 27, 1918. Serial No. 219,385. 9 Claims. (Cl. 95—90.5.)



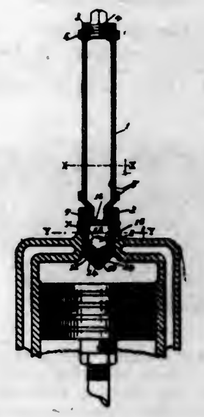
1. A film-developing device comprising a developing-fluid container, reel mechanism rotatable therewithin, the container having a film passage, a case hinged to the container to open and close the passage, and adapted to rotatably inclose a film roll, and film-engaging means on the reel mechanism, whereby the film may be wound from the case onto the reel mechanism.

1,347,033. PNEUMATIC PUMP. HENRY J. HAWVICHORST, Tulare, Calif. Filed July 2, 1919. Serial No. 308,245. 1 Claim. (Cl. 103—8.)



A pneumatic pump comprising a pump cylinder adapted to be mounted in a liquid in a well and having an intake valve, an air pipe connected to the top of the cylinder, a liquid pipe leading from near the bottom of the cylinder, a check valve in the liquid pipe, a pump tube leading upwardly from the check valve, a rod slidingly mounted through the top of the cylinder, a float upon the rod in the cylinder, stops upon the rod above and below the

float, the rod extending to a point above the top of the well, a cable connected to the upper end of the rod and extending over guide pulleys, a weight upon the other end of the cable, stops upon the cable, branch pipes connected to the upper end of the air pipe, stop valves in the branch pipes and having plugs with ports at right angles to each other, arms extending from the plugs and engaging the stops upon the cable, an exhaust tank connected to one branch pipe, a pressure tank connected



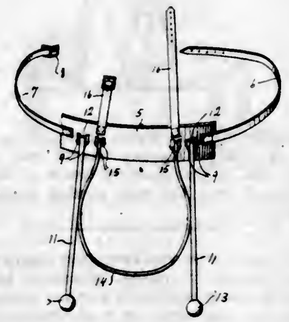
to the other branch pipe, a pipe leading from the exhaust tank to the pump, a pipe leading from the pump to the pressure tank; so that when the float goes down the exhaust branch will be closed and the pressure branch opened to allow the pressure to force the liquid out of the cylinder up the pump tube, and so that when the float goes up the exhaust branch will be opened and the pressure branch closed, and so that the exhaust air passing through the exhaust branch will go to the exhaust tank and to the pump under pressure.

1,347,034. RESILIENT WHEEL. JOHN W. HEADLEY, Long Beach, Calif. Filed Dec. 3, 1919. Serial No. 342,159. 3 Claims. (Cl. 152—28.)

1. A resilient wheel structure comprising, in combination, a hub provided with an extension at its outer end, an annular member surrounding said hub and spaced therefrom, said annular member also surrounding the extension of the hub, a cushioning agency interposed between the annular member and the hub, a cushioning agency interposed between the annular member and the extension of the hub, side plates carried by the annular member and extending inwardly thereof, said plates also extending outwardly of the annular member, a felly positioned between the outwardly extending portions of the side plates, cushioning means interposed between the annular member and the felly, brace plates secured to the side plates and to the outer marginal portions of the outwardly extending parts of the side plates, said brace plates extending beyond the peripheries of said side plates, and annular plates secured to the opposed faces of the extended portions of the side plates and with which the felly has sliding contact.

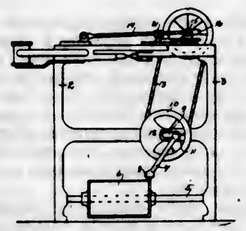
1,347,035. AUTOMATIC INJECTOR. JAMES M. HENDRON, Springfield, Ill. Filed May 26, 1919. Serial No. 299,727. 1 Claim. (Cl. 123—198.)

In an appliance of the class described, the combination of a tubular screw plug having a polygonal head, an internally screw threaded opening through the head, a cylindrical body externally screw threaded, a tapered terminal part, a valve seat in said terminal part, a chamber in said terminal part below the valve seat, and a series of dispersive openings through the wall of said terminal part; a ball supported on said valve seat; and a container screwing into the head of the plug and having a flared terminal on which the ball engages upon outward movement of the ball.



1,347,036. KNIFE. JOHN H. HENSON, Firebaugh, Calif. Filed Aug. 21, 1919. Serial No. 318,932. 1 Claim. (Cl. 279—15.)

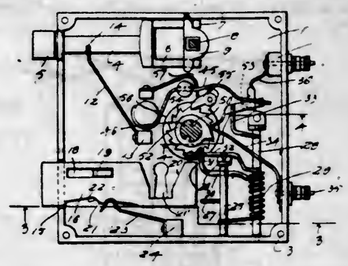
A knife comprising a handle member provided at its end with a perforated blade attaching head, said head being provided with transversely disposed passages defining outwardly projecting lugs, at its corners, a reversible blade having its inner end reduced to form a shank and shoulders, the shank being of substantially the same area in cross section as the said passages, and being adapted to fit in said passages, said shank portion being provided with a perforation adapted to register with the perforation in the head, a clamping plate adapted to bear on the upwardly projecting lugs and shank, being provided with a perforation adapted to register with



the first named perforations, and a bolt to extend through said perforations, being of a length to permit the blade to be adjusted to several positions without removing the same.

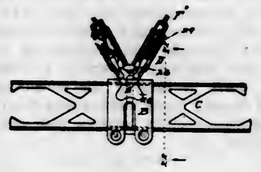
1,347,037. BODY-BRACE. JEREMIAH R. HOLLIDAY, Winnsboro, S. C. Filed Apr. 28, 1920. Serial No. 377,339. 2 Claims. (Cl. 155—37.)

1. A body brace comprising a plate, securing means carried by the end portions of said plate for securing the plate upon the person, legs pivoted at one of their ends to the portion of said plate disposed beneath the arm pits of the person, the upper portion of said legs being disposed in a plane parallel to the plane of the plate, the lower portion of said legs gradually extending outwardly for engagement with the ground, a neck strap secured to the plate between the legs, and a U-shaped brace pivoted at its ends to the plate and adapted to engage the legs.



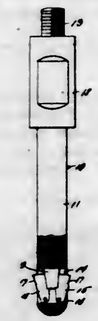
1,347,038. SOLE-STITCHING MACHINE. ABRAHAM MAX HOLTZMAN, Brooklyn, N. Y. Filed Dec. 22, 1917, Serial No. 208,343. Renewed Mar. 13, 1920. Serial No. 365,659. 3 Claims. (Cl. 112—28.)

1. A sole stitching machine having a needle bar, a lever for operating said bar, a rod connected to said lever a driving means for reciprocating said rod and an adjustable projection movable upon said rod for operating the bobbin.



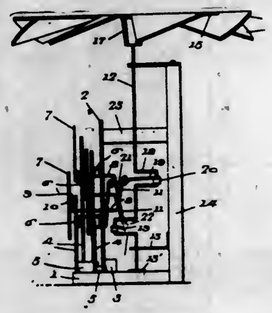
1,347,039. CIRCUIT-CLOSER FOR LOCKS. JAMES J. HOOD, Ponder, Ga., assignor of twenty-five per cent. to Sarah A. Saxon, Ponder, Ga. Filed July 3, 1918. Serial No. 243,241. 3 Claims. (Cl. 200—55.)

1. A device of the character set forth comprising a casing, a locking bolt slidable in said casing, tension means for said locking bolt, spaced contacts carried by said casing, a shaft journaled in said casing, a second shaft journaled in said casing, tension means for said second shaft, an arm carried by said second shaft and in engagement with one of the contacts, means establishing a connection between the shafts, and an arm carried by said first shaft and adapted to be engaged upon the retraction



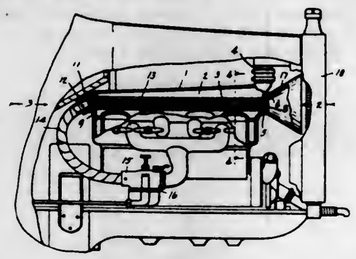
of the locking bolt to cause the latter arm to move the contacts through the above named means in engagement with each other.

1,347,040. AEROPLANE CONSTRUCTION. HARRIS G. HOOPER, Los Angeles, Calif. Filed Sept. 19, 1918. Serial No. 254,712. 8 Claims. (Cl. 244—31.)



1. In aeroplane construction, a clip adapted to fit around a frame member, means for securing the clip in a selected position on the frame member, a stud projecting from the clip, a compression member abutting against the stud, and a clamping collar overlapping the abutting ends of both the stud and the compression member for holding the said members together.

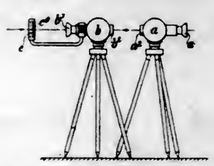
1,347,041. FISHING-TOOL FOR PUMPS. RALPH W. HOOVER, Armstrongs Mills, Ohio. Filed Apr. 19, 1918. Serial No. 229,602. 2 Claims. (Cl. 294—93.)



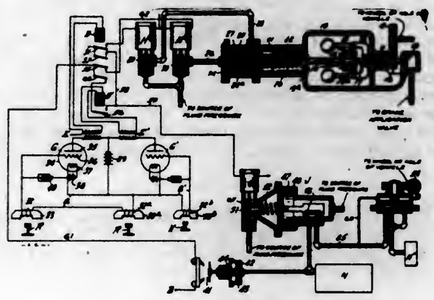
1. A tool of the class described comprising a rod having extending transversely through its lower end, a pair of gripping elements pivotally mounted at their lower ends in the lower end of said opening with their outer edges at their upper ends threaded to interlockingly engage the threads of a valve, and a resilient element mounted between said elements.

1,347,042. PAPER-TOY AMUSEMENT DEVICE. ANTHONY HUBNER, Bloomingdale, N. J., assignor of one-half to Louis J. Lichtenberger, New York, N. Y. Filed July 8, 1919. Serial No. 309,267. 2 Claims. (Cl. 46—40.)

1. An amusement device embodying a base, a background on the base, supporting means on the base at different positions longitudinally of the background and at different distances therefrom, a group of independent cut-out figures in front of the background supported by said means in a predetermined relation, stays connecting said figures to the background to hold them upright, rock shafts journaled through said background and figures, movable parts for said figures carried by said shafts, a vertical crank shaft in rear of the background, a propeller mounted on said crank shaft above the background, and an operative connection between said shafts in rear of the background.



1,347,043. COOLING SYSTEM FOR GAS-ENGINES. HOMER H. JUSTICE and EDMUND J. O'BRIEN, Pasadena, Calif. Filed Mar. 24, 1919. Serial No. 284,785. 3 Claims. (Cl. 123—170.)



1. A cooling system for gas engines comprising air flues mounted to extend through the water chamber, and a connection between the discharge ends of the air flues and a carburcter, so that the action of the engine will draw air through the flues to cool the water and warm the air.

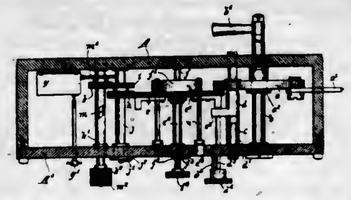
1,347,044. ADJUSTMENT OF UNIOCULAR TELEMETERS. ALBERT KÖNIG, Jena, Germany, assignor to Firm of Carl Zeiss, Jena, Germany. Filed Apr. 8, 1915, Serial No. 20,063. Renewed Dec. 29, 1919. Serial No. 348,200½. 2 Claims. (Cl. 88—2.7.)

1. Method of adjusting a telemeter comprising an ocular, two objective reflecting systems the distance apart of which systems forms the base-line of the telemeter, two objective lenses each placed behind one of the said objective reflecting systems and a separating prism system adapted to transmit the two ray-pencil-systems entering the said objective reflecting systems to the said ocular, which method consists in imaging in the focal plane of a similar second telemeter having a base-line of about equal length any object by means of the ocular of the said second telemeter, placing the telemeter to be adjusted opposite the second telemeter in such a manner, that the rays emerging from the second telemeter enter the objective reflecting systems of the telemeter to be adjusted, and observing by means of the ocular of the telemeter to be adjusted the two images, each of which is formed by one of the objective lenses of the telemeter to be adjusted from the rays passing through this objective lens.

1,347,045. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. LLOYD V. LEWIS, Edgewood borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Apr. 16, 1917, Serial No. 162,262. Renewed Dec. 27, 1919. Serial No. 347,838. 11 Claims. (Cl. 246—39.)

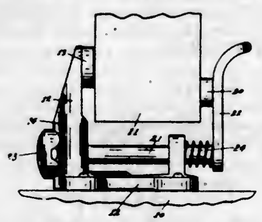
2. A railway traffic controlling system comprising apparatus on a vehicle for imposing a high speed limit, a medium speed limit, or a low speed limit, trackway means for rendering said apparatus effective to impose the high speed limit, and a slow-acting device on the vehicle for rendering said apparatus effective to impose the medium speed limit during a limited interval after said trackway means ceases to be effective, said apparatus operating to impose the low speed limit after said slow-acting device ceases to be effective.

5. A railway traffic controlling system comprising a slow-acting device on a vehicle, vehicle governing apparatus controlled by said device for imposing a fixed speed limit during the interval required for said device to operate, and trackway means for holding said device in its initial condition and removing said vehicle governing apparatus from control by said device to permit progress of the vehicle at a speed higher than said fixed value.



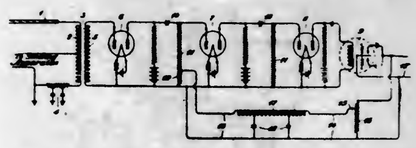
9. Railway traffic controlling apparatus comprising a high speed magnet and a medium speed magnet carried by a vehicle, means controlled from the trackway for energizing said high speed magnet, a slow-acting device on the vehicle arranged to change from an initial condition to an ultimate condition within a fixed interval, means controlled by said slow-acting device while changing for energizing said medium speed magnet, means for holding said slow-acting device in its initial condition while the high speed magnet is energized, means located at intervals in the trackway for restoring said slow-acting device when the high speed magnet is deënergized, and vehicle governing means controlled by said magnets for imposing a high speed limit when the high speed magnet is energized, a medium speed limit when the medium speed magnet only is energized, and a low speed limit when both magnets are deënergized.

1,347,046. MINER'S CAP. MARTIN T. MCDONOUGH. Wheeling, W. Va. Filed Jan. 16, 1920. Serial No. 351,752. 3 Claims. (Cl. 2—117.)



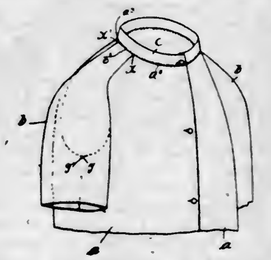
3. A miner's cap comprising a body portion, a foraminous crown portion covering the opening in the top of the body portion and a circular dished shield plate having its concaved side overlying said foraminous crown portion, said shield plate being provided with upstanding V-shaped radial offsets extending to its periphery and forming air channels communicating with the space between the shield plate and said foraminous head portion.

1,347,047. TIME-LOCK. AMEDEO A. MANCINI, Brooklyn, N. Y. Filed Oct. 7, 1919. Serial No. 329,127. 19 Claims. (Cl. 70—26.)



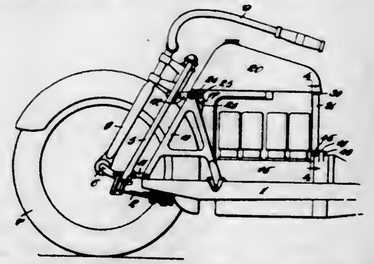
1. A time lock embodying therein a bolt mechanism, an actuating mechanism therefor including therein a rotatable plate operatively connected with said bolt mechanism, a locking mechanism adapted, when said bolt mechanism is operative, to engage and prevent rotative movement of said plate, a releasing mechanism normally disengaged from, but adapted to engage, said locking member at predetermined intervals and disengage it from said plate, and clock works controlling said releasing mechanism.

1,347,048. DOOR STOP AND HOLDER. ALBERT H. MARDAUS, Minneapolis, Minn. Filed Jan. 6, 1920. Serial No. 349,690. 6 Claims. (Cl. 292—103.)



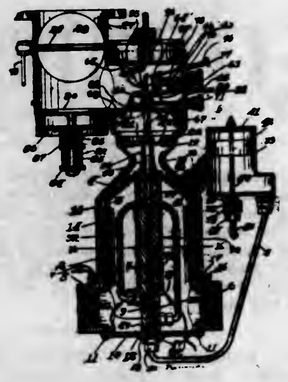
1. A door stop and holder consisting of a fixed bracket having a rib thereon, a door engaging member pivotally mounted to said bracket adjacent said rib, said member having radial notches and means for yieldingly pressing same against said rib whereby the door engaging member may be yieldingly held in either idle or operative position.

1,347,049. CORRECTING CIRCUITS FOR HIGH-DISTORTION LINES. WILLIAM H. MARTIN, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 18, 1918. Serial No. 240,624. 3 Claims. (Cl. 178—63.)



1. The combination with a transmitting line of high distortion and attenuation, of a thermionic amplifier for increasing the strength of the received current impulses, a relay for responding to the amplified impulses, and means for applying to the input circuit of the thermionic amplifier a gradually increasing potential proportional to the number of successive impulses of like sign arriving in the output circuit of said relay.

1,347,050. GARMENT AND METHOD OF CUTTING THE SAME. MARY C. MURPHY, Haverhill, Mass. Filed Jan. 25, 1919. Serial No. 273,137. 5 Claims. (Cl. 2—92.)

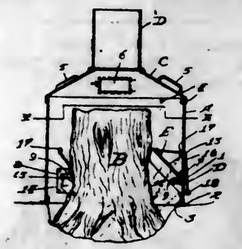


1. A garment comprising a body section having its top edge formed to provide collar portions at the front and at the back and intermediate arm-scye notches, the edges of which lead from the adjacent ends of said collar portions, and one-piece sleeves extended to form side collar portions, in continuation with said front and back collar portions, and seamed to the edges of said notches, the longitudinal edges of said sleeves being joined by seams extending from the bottom of said notches.

1,347,051. TANK SUSPENSION FOR MOTOR-VEHICLES. BOUDEWIJN B. NEUTEBOOM, Detroit, Mich., assignor to The Militor Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 29, 1918. Serial No. 251,981. 10 Claims. (Cl. 280—5.)

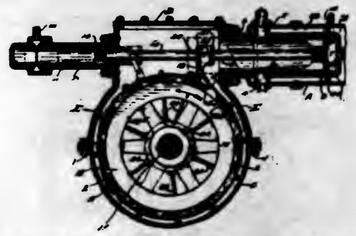
1. The combination of a vehicle structure, a tank hingedly connected to the structure at one point, and a connection between the tank and structure at another point that is capable of universal movement.

1,347,052. CARBURETER. FREDERICK A. OST, Minneapolis, Minn. Filed July 6, 1914, Serial No. 849,125. Renewed Dec. 8, 1919. Serial No. 348,425. 5 Claims. (Cl. 261—12.)



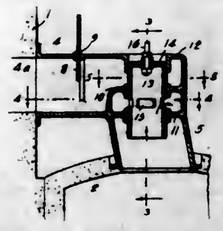
1. A carbureter, comprising, in combination, inclosing walls forming inner reverberatory and outer gasifying chambers, said inner chamber being formed with an inlet and an outlet for the ingress and egress of exhaust gases and said outer chamber having an inlet and an outlet for the admission of air and the egress of fuel mixture, said inner chamber being formed with a long fuel gasifying tube depending downwardly therein having its lower end adapted to be connected with a source of fuel supply and its upper end connected with said outer chamber, a valve seated in said tube and adapted to close the passage in its lower end and having a long stem extending upwardly through said passage and provided with a channel in its side whereby residue in the passage of said tube from the passage of fuel mixture therethrough is collected, said valve being removably mounted in said tube, whereby said channel can be cleaned and means for opening and closing said valve.

1,347,053. MOTION-PICTURE FILM. OLE ANDREW OWEN, New York, N. Y. Filed Aug. 29, 1919. Serial No. 320,634. 6 Claims. (Cl. 88—19.5.)



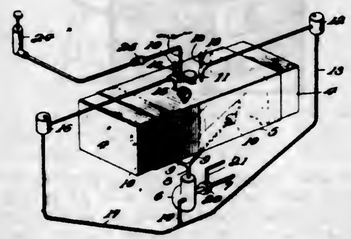
1. A motion picture film having successive spaced portions provided with successive pictures and corresponding spaced portions of equal size between said pictures occupied by descriptive matter to cause such descriptive matter when the film is projected upon a screen to have an apparent effect of being superposed upon said picture.

1,347,054. STUMP-BURNER. BENJAMIN F. PAXTON, St. Paul, Minn. Filed July 12, 1917. Serial No. 180,218. 5 Claims. (Cl. 110—21.)



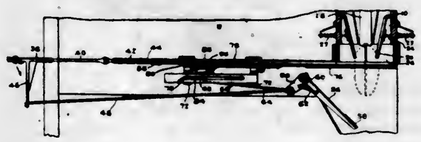
1. A stump burner, comprising, a casing adapted to inclose a stump, having a draft inlet, a movably adjusted draft director coöperating with a stationary draft director secured to the casing over said inlet, said movable director comprising a laterally and inwardly extending blade, whereby draft is changed in a further downward direction and spread on the stump, and means for raising and securing said movable director in elevated position.

1,347,055. GAS-ENGINE. PETER R. PETERSON, Salt Lake City, Utah. Filed Mar. 7, 1919. Serial No. 281,289. 2 Claims. (Cl. 123—65.)



1. In a gas engine the combination of an explosion cylinder having an exhaust and an inlet port; an air cylinder in alinement with said explosion cylinder; a piston operable in each of said cylinders; a connecting rod between said pistons; a driven shaft transversely mounted adjacent said connecting rod; a rotor secured on and rotatable with said shaft; a friction band concentrically spaced from said rotor; friction shoes fastened on the inner face of said friction band; springs to normally hold said shoe spaced from said rotor; and a connecting lever pivoted to the ends of said friction band and operated by said connecting rod.

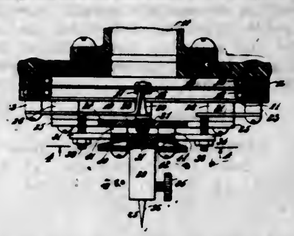
1,347,056. VALVE FOR COKE-OVENS AND THE LIKE. WILLIAM E. ROBERTS, New York, N. Y., assignor, by mesne assignments, to Foundation Oven Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 17, 1919. Serial No. 283,106. 3 Claims. (Cl. 251—76.)



1. An air valve for coke ovens or the like comprising a casing forming two chambers, an air branch communicating with one of said chambers and a burnt gas branch communicating with the other and a cylindrical valve body having an open end in permanent communication with a flue and having a side opening adapted to be shifted to either of two positions in which it opens communication of the flue with said air branch and said burnt gas branch respectively.

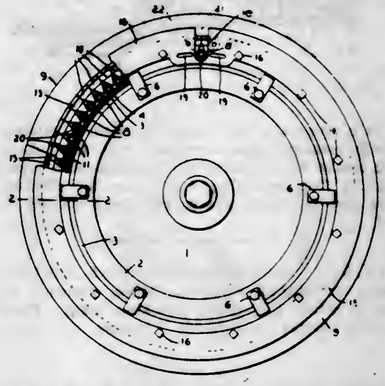
1,347,057. METHOD OF EXTINGUISHING FIRES IN AND ABOUT HYDROCARBON-TANKS AND APPARATUS FOR CARRYING OUT THE SAME. WALDO A. ROSS, Sioux Falls, S. D. Filed Sept. 26, 1918. Serial No. 255,801. 6 Claims. (Cl. 169—4.)

1. The method of extinguishing fire in or about hydrocarbon tanks consisting in surrounding the tank on exposed surfaces thereof with a non-combustion supporting agent under pressure in excess of the pressure due to its head and greater than the pressure on the hydro-carbon in the tank.



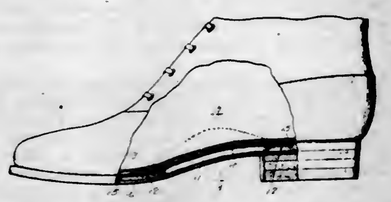
1,347,058. MACHINE FOR CUTTING SEED-POTATOES. JESSE LYLE SCHROEDER, Erie, N. D. Filed Mar. 5, 1920. Serial No. 363,436. 5 Claims. (Cl. 146—7.)

1. In a machine for cutting seed potatoes, the combination of a cutting-box, stationary knives in said cutting-box, means for forcing potatoes upon said knives to cut them longitudinally, means for holding the pieces of the potato which has just been cut, a pivoted member having its free end underneath and normally urged toward said cutting-box, means for depressing said pivoted member when said forcing means forces a potato upon said knives, a horizontally-movable knife blade, and means for causing said knife blade to move and cut transversely a long potato when said pivoted member is restrained thereby from returning to its full upward position.



1,347,059. PHONOGRAPH SOUND-BOX. CHARLES H. SHAW, Babylon, N. Y. Filed Oct. 29, 1919. Serial No. 334,105. 8 Claims. (Cl. 274—28.)

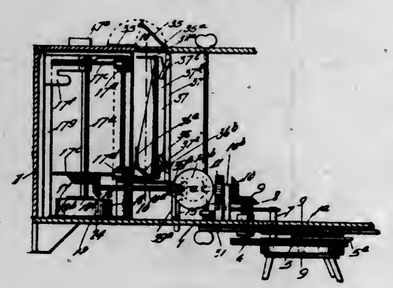
1. A sound-box for phonographs, comprising a diaphragm chamber, a diaphragm, a needle-holder, means carried by the diaphragm chamber and supporting the needle-holder co-axially with the diaphragm, and connecting means between the diaphragm and the needle-holder enabling the latter to vibrate laterally or vertically



and thereby play a laterally cut or a hill-and-dale record without shifting or adjustment of the sound-box or any of its parts.

1,347,060. RESILIENT TIRE. JOSEPH SPADAFORA, Cambridge, Mass. Filed Apr. 23, 1919. Serial No. 292,105. 4 Claims. (Cl. 152—1.)

2. In a wheel having a resilient tire, the combination with a wheel body, of a rim applied thereto, an annular resilient tread member encircling said rim, but spaced therefrom, and a plurality of independent filling elements interposed between the tread member and rim, said filling members permitting any portion of the tread member to be moved inwardly on a radial line and such inward movement operating through the filling members to force adjacent portions of the tread member outwardly.



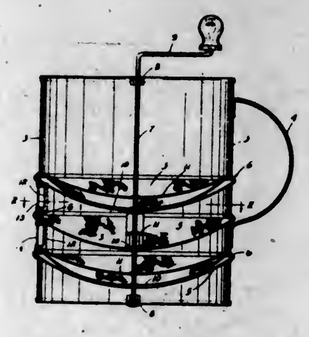
1,347,061. COMBINED SHANK AND ARCH SUPPORT FOR FOOTWEAR. JOHN STEINBRECHER, Chicago, Ill. Filed Aug. 12, 1918. Serial No. 249,531. 2 Claims. (Cl. 36—76.)

1. A shoe comprising inner and outer soles, an upper, and a heel and having a rigid supporting element interposed between the inner and outer soles in the shank portion of the shoe; said element comprising a metal plate arched between the heel and the ball of the shoe and having a

series of corrugations extending longitudinally of the plate and terminating within the end marginal portions, the walls of the corrugations being in close juxtaposition whereby a flat supporting surface for the insole is provided, said end marginal portions being flat, and the bottom edge of the corrugations resting upon the inner face of the outer sole.

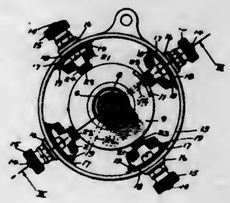
1,347,062. PANORAMIC CAMERA. JEAN E. STROMBERG, San Diego, Calif. Filed Dec. 11, 1918. Serial No. 266,293. 18 Claims. (Cl. 95—15.)

1. In a camera of the class described, a camera case revolubly mounted upon a vertical axis, gear, shaft, and spring means for revolving said camera case, means for holding it from revolving, and means for shifting said camera case forwardly and backwardly relatively to said tripod.



1,347,063. AUTOMOBILE SIGNAL MECHANISM. DELLO THIBEAULT, Campello, Mass., assignor of one-half to Alfred J. Veilleux, Brockton, Mass. Filed Oct. 1, 1919. Serial No. 327,768. 7 Claims. (Cl. 116—45.)

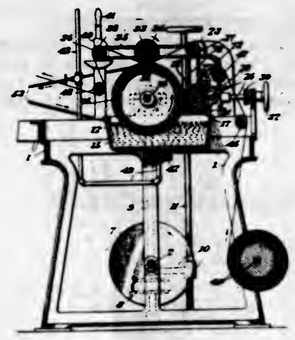
1. A signaling mechanism for automobiles comprising a relatively fixed holder-member carrying signal elements on one face thereof and a vertical guide on the opposite face thereof, a rotatably mounted shield arranged before the face of said member provided with the signals, said shield having a cut-away portion to selectively expose said signals when rotated, a member slidably mounted in said guideway on the other face of the holder member, said slide member being adapted to be reciprocated to project beyond and retracted within the confines of said holder.



2. An automobile signaling mechanism comprising a rear shaft hanger having a longitudinal horizontal bearing and a transverse horizontal bearing, a longitudinal rock shaft journaled in said longitudinal bearing and provided with a signaling member thereon, a transverse rock shaft journaled in said transverse bearing and provided with a crank arm, gears connecting said two last-mentioned rock shafts, an operating lever movable on a fixed fulcrum between the front and rear hangers, and rods connecting said lever with the crank arms of the two transverse rock shafts, combined with means for releasably confining said lever in different predetermined positions.

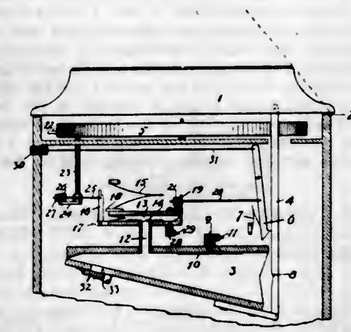
1,347,064. FLOUR-SIFTER. JOSEPHINE TONSTAD and HELEN FINSNESS, St. Paul, Minn. Filed Oct. 31, 1919. Serial No. 334,673. 1 Claim. (Cl. 83—60.)

A flour sifter comprising a shell, a plurality of vertically spaced sieve bottoms in the shell, an upright stem journaled in the shell and having on its upper end an operating crank, scrapers secured to the stem and working over the upper faces of the sieve bottoms, a discharge opening in the shell between each pair of sieve bottoms, and individually operated gates for the discharge openings.



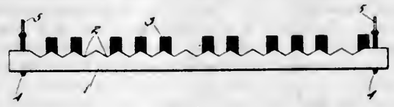
1,347,065. COMMUTATOR. LAUREN T. TUTTLE, San Francisco, Calif. Filed June 9, 1919. Serial No. 302,960. 5 Claims. (Cl. 200—26.)

4. In a contact device, the combination of a movable contact member, binding posts suitably insulated and in line with said movable contact, plates carried by the ends of said binding posts, coiled spring members each provided with a loop substantially in the center of the coils thereof and extending tangentially from said coil and each having its free ends secured to one of said plates, contact members carried by said loops, said contacts being circular in form and each provided with an annular groove adapted to engage a loop on one of said coiled spring members.



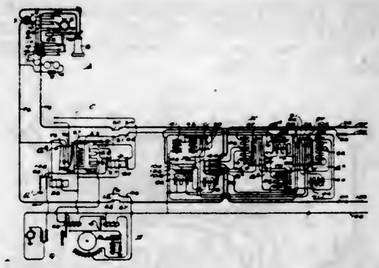
1,347,066. SILK-FINISHING MACHINE. GIUSEPPI P. VUONO, Brooklyn, N. Y. Filed Jun 30, 1919. Serial No. 307,679. 5 Claims. (Cl. 91—51.)

1. In a silk finishing machine, the combination of a paste container, a paste-applying roller formed of soft inherently resilient non-absorbent material having minute cells or cavities in its surface to take up and hold the paste, a pressure roller engaging the applying roller, a regulating roller engaging the applying roller at a point between the paste container and the pressure roller,



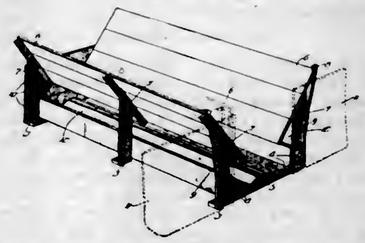
means for rotating said rollers, and means for adjusting the regulating roller to cause the same to deform the resilient cellular surface of the applying roller.

1,347,067. PHONOGRAPH-CABINET. FRANK C. WHITE, Meriden, Conn. Filed Apr. 30, 1918. Serial No. 231,576. 10 Claims. (Cl. 274—1.)



1. A cabinet for a phonograph including a cover movable from a closed to an open position and vice versa, and means for retarding the closing movement of the cover to cause the same to close slowly and quietly, means for permitting said phonograph to start, said means being associated with said retarding means to put the latter into operation when said means for permitting starting is operated.

1,347,068. KEYBOARD FOR PRACTICING AND TEACHING THE PLAYING OF THE PIANO. HENRY STAPLES WILDER, Newton, Mass. Filed Oct. 20, 1919. Serial No. 331,919. 4 Claims. (Cl. 84—92.)



1. A keyboard for practicing and teaching piano having formed therein a plurality of corrugations parallel with and spaced apart from each other in similar relation to each other as the white keys of a regular piano keyboard.

1,347,069. AUTOMATIC TELEPHONE SYSTEM. GEORGE A. YANOCHOWSKI, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 10, 1916. Serial No. 90,047. 7 Claims. (Cl. 179—18.)

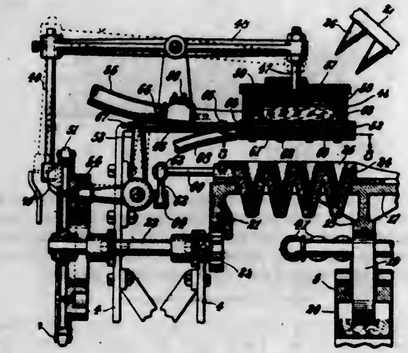
6. In a telephone system, an automatic progressively movable switch provided with operating means and releasing means, and a common controlling circuit therefor, said means separately responsive to impulses of different frequency transmitted over said controlling circuit.

1,347,070. SHEEP-FEEDING RACK. OSCAR M. YORK, Millington, Mich. Filed Oct. 21, 1918. Serial No. 258,963. 2 Claims. (Cl. 119—59.)

1. A feeding rack of the character described comprising a U-shaped frame work having a floor and side boards to form feed troughs along each side, wings centrally pivotally supported on the top of the frame so as to close the sides of the rack and feed troughs when in vertical position, said wings being movable inwardly at their bottoms from the inside or one end of the rack to provide feeding openings, and means engaging the upper edges of the wings for holding them in such latter position.

1,347,071. PROCESS OF OXIDIZING ISO-BORNEOL TO CAMPHOR. ROLAND L. ANDREAU, Wilmington, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 12, 1917. Serial No. 201,676. 20 Claims. (Cl. 23—24.)

1. The process which comprises oxidizing iso-borneol into camphor by the application of mixed nitric and sulfuric acids.

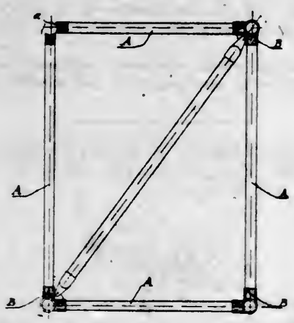


1,347,072. EYEGLASSES. EUGENE C. BERNHEIM, Southbridge, Mass. Filed Oct. 9, 1917. Serial No. 195,603. 6 Claims. (Cl. 88—50.)

1. In an eyeglass, the combination of the lenses, bridge and pivoted finger levers, washers having an adjustable

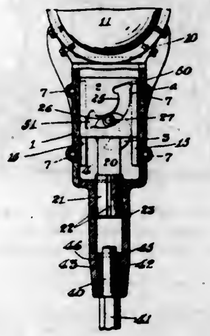
locking connection on the pivots of said levers, and springs mounted upon said washers and coiled concentrically of the axis of the pivots and having their free ends engaging the finger levers.

1,347,073. PASTRY-FEEDING MECHANISM FOR PASTRY-CONE MACHINES. CHARLES F. BETZ, St. Louis, Mo. Filed July 10, 1919. Serial No. 309,852. 13 Claims. (Cl. 107—29.)



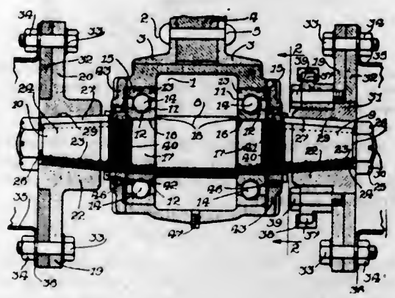
1. In a pastry baking machine, batter feeding means, and a cooling jacket therefor.

1,347,074. SUBSTITUTE FOR LINSEED-OIL AND PROCESS OF MAKING SAME. ROBERTO C. BONN, Managua, Nicaragua, assignor of one-half to Manuel A. Esteva, New York, N. Y. Filed Mar. 23, 1918. Serial No. 224,313. 16 Claims. (Cl. 134—56.)



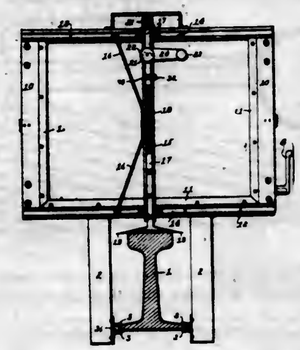
10. The process of producing a substitute for linseed oil, which includes mixing sixty parts kerosene oil with forty parts lubricating oil and mixing with that mixture ten parts of rosin; heating this mixture to boiling, continuing the boiling for approximately fifty minutes, agitating the mixture, adding thereto two and one-eighth parts of hydrate of manganese, causing the mixture to boil for about fifteen minutes, stirring the ingredients during the addition of the manganese, withdrawing the supernatant liquid from this mixture, adding thereto about one part of red-cod oil, and allowing the resultant mixture to rest for approximately twelve hours.

1,347,075. CONNECTION OF TUBES OF DISSIMILAR METALS. LOUIS BAUGUET, Velizy, France, assignor to Societe Anonyme Des Ateliers D'Aviation Louis Breguet, Velizy, Seine-et-Oise, France. Filed Nov. 2, 1918. Serial No. 260,904. 4 Claims. (Cl. 189—36.)



1. In a tubular structure comprising tubes and connecting pieces of dissimilar metals, the combination of a tube and connecting piece, the latter having a socket receiving the end of the former, and sulfur filling the space between their contiguous surfaces and serving as a dielectric to prevent electrolytic action.

1,347,076. POWER-TRANSMITTING MEANS. WILLIAM BUHL, Flushing, N. Y., assignor to Bulkrug Machine Corporation, a Corporation of New York. Filed Nov. 26, 1918. Serial No. 264,134. 10 Claims. (Cl. 255—37.)

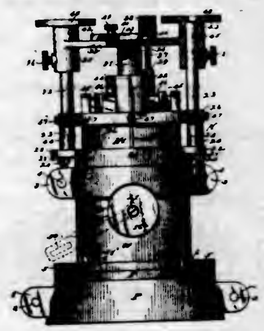


7. In a device of the character described, the combination of a motor driven crank, a tool, a cam actuated by the said crank to operate the said tool, said cam having a quadrantal cam slot proportioned to translate the rotary motion of the said crank into a reciprocating quick-return movement of the said cam member and the said cam contour having a part which is parallel to the path of motion of said tool whereby at the moment of impact of said tool the said crank is in released relation with respect to the said cam member, substantially as described.

1,347,077. CENTER-SUPPORT BEARING. OSCAR F. CARLSON, Chicago, Ill. Filed Nov. 6, 1918. Serial No. 261,329. 6 Claims. (Cl. 64—36.)

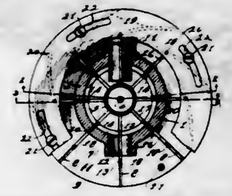
1. In a device of the kind described, a rotatable shaft, a shaft housing, a pair of anti-friction bearings rotatably mounting the shaft in the housing, each said bearing having an inner bearing ring carried on the shaft, the shaft having spaced shoulders for spacing the rings apart, a clamping ring threaded on the shaft adjacent to each bearing ring and adapted to clamp the rings against said shoulders, a longitudinal keyway in said shaft extending beyond each clamping ring, each clamping ring having a recess in its outer end registering with the adjacent keyway, a key in each keyway and entering the recess in its respective clamping ring, and means retaining said keys in their respective keyways.

1,347,078. RAIL-PROFILE INSTRUMENT. FRANK V. CARMAN, Oakland, Calif. Filed Sept. 16, 1919. Serial No. 324,122. 5 Claims. (Cl. 33—23.)



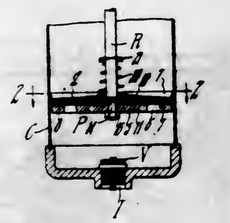
1. A rail profile-drawing instrument comprising a paper-holder; clamping members for securing said paper-holder to the rail in a plane perpendicular thereto; a horizontal guide at the top and bottom of said paper-holder; a slide member in each horizontal guide; a vertical guide connecting said slide members; a slide operating within said vertical guide; a stylus carried by the upper portion of said slide; and a finger secured to the lower portion of said slide and adapted to follow the surface of said rails.

1,347,079. FASTENING DEVICE FOR PHONOGRAPH-SPRINGS. GEORGE T. CHEAINGTON, Waukegan, Ill. Filed Oct. 5, 1918. Serial No. 257,016. 3 Claims. (Cl. 185—45.)



1. A fastening for phonograph springs comprising a headed pin fixedly mounted in a shaft, which engages the sides of an opening adjacent the end of the spring, said opening comprising a slot terminating in a circular opening at one end, the edge of said slot passing through the center of the circular opening.

1,347,080. ADJUSTABLE CORE-BOX. EDWARD W. CLARK, Los Angeles, Calif., assignor of one-half to Stanley S. Turner, Pasadena, Calif. Filed Oct. 31, 1918. Serial No. 261,426. 45 Claims. (Cl. 22—13.)

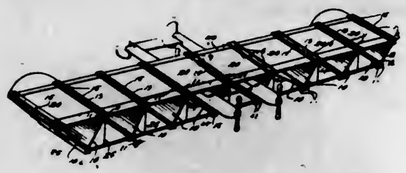


1. In a core box, a fixed body portion having members supported thereon for forming longitudinal recesses in the periphery of the core, and means supported on said body for extending the end portions thereof relative to said members.

1,347,081. CORE-BOX. EDWARD W. CLARK, Los Angeles, Calif., assignor of one-half to Stanley S. Turner, Pasadena, Calif. Filed June 30, 1919. Serial No. 309,230. 14 Claims. (Cl. 22—10.)

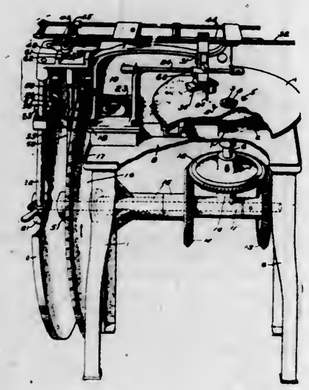
1. A core box having a body molding portion, and a plurality of peripheral recess forming elements movable radially through said body and into and from contact with the core for the purpose described.

1,347,082. PISTON. JOHN B. DAVIS, Springfield, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a Corporation of Massachusetts. Filed Oct. 3, 1919. Serial No. 328,270. 6 Claims. (Cl. 103—63.)



5. A piston, comprising, a circular body, a cupped piston packing applied face to face on the body with its circumferential portion extending away from the body, a circular member imposed face to face on said packing to prevent flexture of the face portion of the latter, communicating openings through said body, packing and member, a circular flexible valve member mounted face to face against the first-named member to close the openings therein, a piston rod by means of which said body, packing and both members are clamped together in face to face relation, a disk of dish-shaped cross section slidable on said rod and bearing against the valve member near its periphery, and yieldable means to force the disk against the valve member, the latter being greater in diameter than the interior of the circumferential portion of the piston packing to fit within the latter in slightly cupped form.

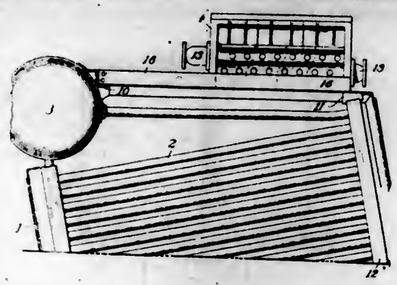
1,347,083. PROCESS OF PRODUCING MERCURO-AMINO COMBINATIONS. ARON ECKMANN, Berne, Switzerland, assignor to Schweiz. Serum- und -Impfinstitut, Berne, Switzerland, a Corporation of Switzerland. Filed June 29, 1917. Serial No. 177,720. 1 Claim. (Cl. 23—24.)



Process of producing mercurous-amino combinations and the complex salts thereof which consists in subjecting 1-phenyl-2.3 dimethyl-4-sulfamino-5-pyrazolon to the action of at least one molecular proportion of a mercurous salt.

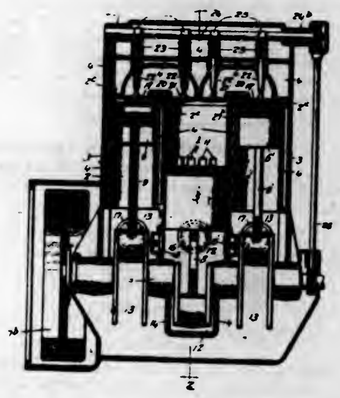
1,347,084. AIRPLANE. THOMAS L. EGGLESTON, Washington, D. C., assignor to Eggleston Air-Cell Aeroplane Company, a Corporation of Delaware. Filed July 9, 1918, Serial No. 244,045. Renewed Oct. 9, 1919. Serial No. 329,632. 4 Claims. (Cl. 244—31.)

1. The hereindescribed structure for airplanes and for other purposes, comprising units or sections adapted to be arranged in oblique supporting relation one to the other and having end portions to overlap the end portions of the contiguous unit or section, transversely arranged bars disposed within the spaces between the said units or sections and their overlapping portions, and means for securing the said bars to lock the parts together.



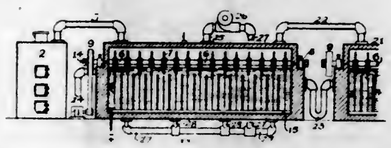
1,347,085. CAM-PATH-GENERATING MACHINE. EDWARD E. FOSTER, Beverly, Mass. Filed Oct. 24, 1913. Serial No. 797,078. 13 Claims. (Cl. 33—27.)

1. A cam path generating machine, having, in combination, a leader support, a tool, and means for generating a cam path upon the leader comprising mechanism for rotating the leader, mechanism for reciprocating the tool, while the leader is being rotated and mechanism for constraining the tool to reciprocate radially of the leader, substantially as described.



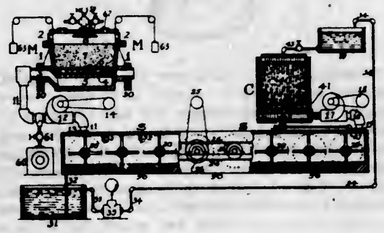
1,347,086. SUPERHEATER. ERNEST H. FOSTER, Dongan Hills, N. Y., assignor to Power Specialty Company, New York, N. Y., a Corporation of New York. Filed Jan. 16, 1919. Serial No. 271,366. 2 Claims. (Cl. 122—478.)

1. In a cross drum water tube boiler, the combination with main horizontal beams supported at one end upon the steam and water drum, and at the other end upon the upper headers of the boiler tubes, of upper beams and vertical supports therefor resting on the said main



horizontal beams, a superheater suspended from the said upper beams and a casing inclosing the superheater as set forth.

1,347,087. COMPOUND QUICK-COMBUSTION ENGINE. WALDO G. GERNANDT, Chicago, Ill. Filed Dec. 16, 1918. Serial No. 266,911. 9 Claims. (Cl. 60—15.)

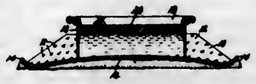


1. In a quick combustion engine, a two cycle cylinder and a piston therefor, and a plurality of four cycle cylinders and pistons therefor in combination with means to direct, on the combined inspiration and compression travel of the said two cycle piston, the contents of said two cycle cylinder into said four cycle cylinders on the respective inspiration travel of said four cycle pistons, said means also arranged to direct the flow of products of combustion in said four cycle cylinders, on the exhaust travel of the pistons thereof, into said two cycle cylinder on the power travel of said two cycle piston, and an exhaust to said two cycle cylinder to direct products therein to waste.

1,347,088. ELECTROLYTIC APPARATUS. WILLIAM E. GREENAWALT, Denver, Colo. Filed Feb. 1, 1917. Serial No. 145,884. 31 Claims. (Cl. 204—5.)

9. In electrolytic apparatus, a chamber having a gas inlet and a gas outlet and adapted to contain a liquid and to confine a gas over the liquid, means for flowing a gas from the gas inlet to the gas outlet, means for taking the gas from above the liquid and forcing it through the liquid, and means for passing an electric current through the liquid.

1,347,089. APPARATUS FOR TREATING LIQUIDS WITH GASES. WILLIAM E. GREENAWALT, Denver, Colo. Filed Mar. 25, 1915, Serial No. 16,962. Renewed Feb. 27, 1920. Serial No. 361,723. 26 Claims. (Cl. 204—1.)



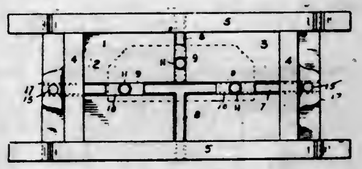
3. In apparatus for treating liquids with gases, a stationary chamber having a gas inlet and a gas outlet and a liquid inlet and a liquid outlet and adapted to contain a liquid and to confine a gas over the liquid, means operating within said chamber for submerging some of the gas in the liquid, and electrical means for causing a chemical reaction between the liquid and the gas.

1,347,090. PEN AND PENCIL CLIP. GEORGE F. HAHN, New York, N. Y. Filed Mar. 26, 1920. Serial No. 368,823. 5 Claims. (Cl. 24—11.)

2. A pen or pencil clip embodying a holder adapted to be mounted on a pen or pencil, a star wheel supported by said holder and adapted to engage with the exterior of the pocket, when the pen or pencil is positioned within the pocket and manually operable means for normally locking the star wheel against rotation, whereby the pen or pencil is normally maintained in the pocket by the positive grip of the star wheel on the fabric of the garment.

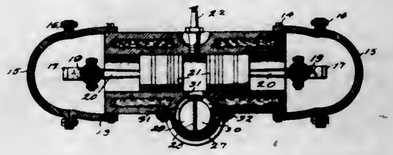
1,347,091. VEGETABLE-PEELER. JOHN H. HAMLIN, New York, N. Y. Filed May 21, 1919. Serial No. 298,585. 4 Claims. (Cl. 146—15.)

1. The herein described potato peeling device comprising a body of rigid abrasive material having a plastic and gritty sharp and abrasive surface, an edge of the body serving as a cutting device for removing the eyes of the potatoes.



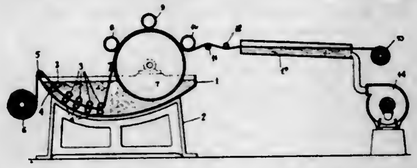
1,347,092. EMERGENCY LAUNCHING SYSTEM FOR TORPEDOES. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed June 1, 1916, Serial No. 101,107. Renewed Oct. 9, 1919. Serial No. 329,648. 14 Claims. (Cl. 114—18.)

1. A marine vessel having a support adapted to receive a torpedo, and in combination with said support, torpedo launching means, and means including a normally open electric circuit, including spaced conducting



plates capable of closing said circuit when they are pierced by a discharged projectile to render said torpedo launching means active for the launching of the torpedo.

1,347,093. MOLDING APPARATUS. HARRY S. HANSTINE, Ambridge, Pa., assignor of one-half to Frank Hallam, Fair Oaks, Pa. Filed Mar. 6, 1920. Serial No. 363,811. 1 Claim. (Cl. 22—157.)

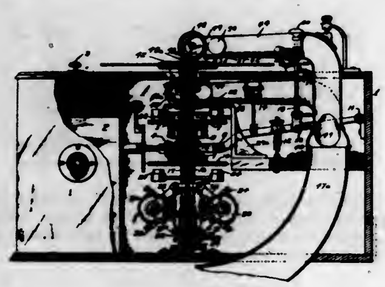


In a molding apparatus a match board provided with intersecting grooves, and a plurality of alining and retaining elements removably mounted in said grooves and each comprising a body portion and a pin.

1,347,094. INTERNAL-COMBUSTION ENGINE. SILAS E. HARLAND, Ocean View, Va. Filed June 10, 1919. Serial No. 303,015. 3 Claims. (Cl. 123—54.)

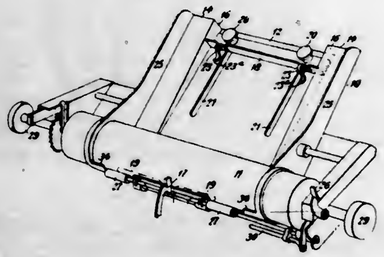
1. The combination with an internal combustion engine, of the opposed piston type having the usual intake and exhaust ports, of a power shaft driven by said engine having an enlarged portion provided with a central cavity, a wall dividing said cavity into compartments, ports formed in one of said compartments coöperating with the intake ports of the engine and ports in the other of said compartments communicating with the exhaust ports thereof.

1,347,095. WATERPROOF FABRIC AND PROCESS FOR PRODUCING THE SAME. ARTHUR B. HARRISON, New York, N. Y. Filed May 17, 1915. Serial No. 28,536. 11 Claims. (Cl. 91—70.)



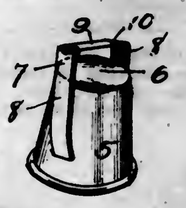
1. As a new article of manufacture, a woven cotton fabric coated and impregnated at a temperature below

that injurious to the cotton fabric with a hot fluid bitumen ductile at all ordinary temperatures and substantially free from bitumen solvents and fluxes, said coated and impregnated fabric being flexible at all ordinary temperatures.



9. The process of coating and impregnating fabrics which comprises passing the fabric through a molten mass of asphaltic bitumen melting at about 175 to 200° F. maintained at a temperature below about 250° F. and successively subjecting the fabric to compresison between heated rolls and to contact with the bitumen, subjecting the fabric after immersion to further compression between a drum heated to about 250° F., and a series of coacting rolls, and cooling the fabric.

1,347,096. AUTOMATIC PHONOGRAPH. CHARLES M. HECK, Raleigh, N. C. Filed May 20, 1915. Serial No. 29,422. 41 Claims. (Cl. 274—10.)



1. The combination with a sound reproducing mechanism having a stylus and a record, of means controlled by the speed of said record for maintaining contact between said record and stylus.

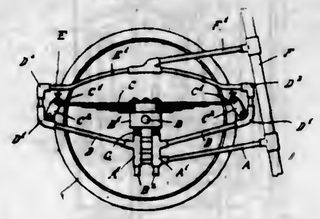
1,347,097. TYPEWRITING-MACHINE. CHARLES M. HILSER, Philadelphia, Pa., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 13, 1917. Serial No. 206,903. 31 Claims. (Cl. 197—140.)

1. The combination with a revoluble platen, of sheet-collating means at the introductory side thereof comprising side gaging means for guiding a narrow outer work-sheet, an end-gage comprising a stop against which the trailing end of said sheet may be backed to gage the same, sheet-holding means to receive said sheet-end when thus backed into engagement with said end-gage and to yieldingly retain the same in place when gaged, and separate means for guiding a wider record-sheet to a position between the platen and the work-sheet, said last-mentioned means comprising a chute open at the side facing the platen to admit access by the fingers of the typist to the trailing end of said record-sheet after it has been caused to closely approach the platen.

1,347,098. STEM-CLIPPING DEVICE FOR FRUIT AND VEGETABLE PICKERS. WILLIAM A. J. HOISINGTON, Dallas, Oreg. Filed Jan. 5, 1920. Serial No. 349,560. 3 Claims. (Cl. 30—24.)

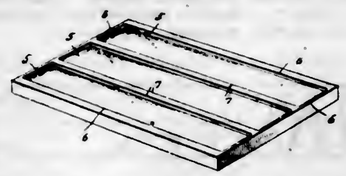
1. A device of the character described comprising a thimble-like body portion adapted to fit upon the end of the finger, a U shaped member the legs of which are secured to the opposite sides of the body portion and the transverse connecting portion of which extends across the end of the body portion and lies in spaced relation thereto to such an extent as to permit the passage of the stem of a fruit therebetween, said transverse connecting portion comprising a flat bar, which lies at an angle to the end of the body portion, that edge of said bar which lies farthest from the body portion being sharpened to form a cutting edge.

1,347,099. HOBBY-CYCLE. WILLIS E. HOWES, Rock Island, Ill., assignor of one-fourth to B. & D. Manufacturing Company, Rock Island, Ill., and one-fourth to Harry E. Winters, Davenport, Iowa. Filed July 19, 1919. Serial No. 312,013. 4 Claims. (Cl. 208—165.)



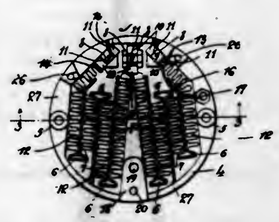
1. In a hobby-cycle toy, the combination with a frame skeleton in form provided with forward and rear supporting wheels, of a drive axle mounted in bearings of the rear of the frame, and on which the rear supporting wheels are fixed, an oscillatory seat pivotally mounted between the upper portions of the sides of the frame and having a front head piece which is provided with downwardly depending arms, an operative connection connected to the lower ends of the arms and having a ratchet drive connection with the drive axle, for transmitting power from the oscillatory seat to the drive axle, said ratchet drive connection comprising a flanged disk, the flange of which having ratchet teeth, the disk being loosely mounted upon the axle, an arm fixed to the axle, and provided with a spring tensioned pivoted dog to slip by the teeth when the disk is moved in one direction and to bite between the teeth when the disk is rotated in the opposite direction.

1,347,100. REAR-SPRINGING DEVICE FOR MOTORCYCLES OR TRICARS. EVAN HENRY JENKINS, Abertillery, England. Filed Aug. 11, 1919. Serial No. 316,857. 2 Claims. (Cl. 208—101.)



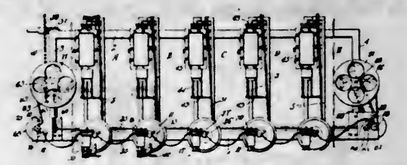
1. In the herein described rear-springing device for motorcycles and tricars, the combination, with the main frame and chain stays of the cycle, of vertically disposed

guide pieces secured to the chain stays, guide rods and guide members guided and carried by the said guide pieces and adapted to support the ends of the road wheel spindle of the cycle, arms united to the guide pieces and extending forwardly and rearwardly beyond the periphery



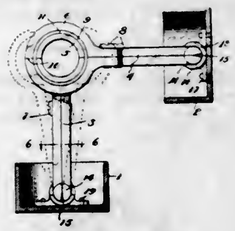
of the road wheel, an arched frame member connecting the ends of the said arms, shackles attached near the outer end of each of the arms, and leaf springs which bear upon the aforesaid guide members and are connected at their extremities to the said shackles, all substantially as and for the purpose set forth.

1,347,101. ENGRAVING-PLATE HOLDER. JAMES W. JENNER, Louisville, Ky. Filed May 29, 1920. Serial No. 385,097. 3 Claims. (Cl. 101—382.)



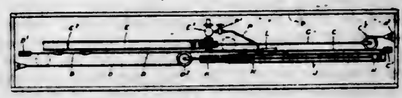
1. An engraving-plate holder, comprising a hard block of material having a recess in one side to provide vertical retaining walls, said recess being of a depth slightly greater than the thickness of the plate to be printed from, and of a width equal to the width of said plate, whereby when the plate is positioned in the holder it is held rigidly between the vertical walls and flush with the upper surfaces thereof.

1,347,102. RESISTANCE DEVICE. LEONARD KEBLER, Bronxville, N. Y., assignor to Ward Leonard Electric Co., a Corporation of New York. Filed Oct. 23, 1915. Serial No. 57,402. 7 Claims. (Cl. 219—64.)



1. In a resistance device, an insulating base plate, a resistive conductor on and contacting with said plate, contact terminals on said plate, said plate having projecting portions for positioning said conductor and said terminals, and an insulating coating embedding said conductor and overlying portions of said contact terminals.

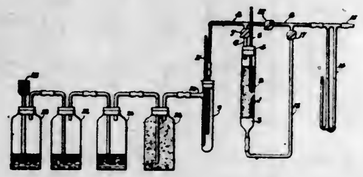
1,347,103. PANORAMIC-MOTION-PICTURE APPARATUS. THOMAS A. KILLMAN, Nashville, Tenn., assignor to International Moving Picture and Film Company, Nashville, Tenn., a Corporation of Tennessee. Filed May 6, 1916. Serial No. 95,904. 5 Claims. (Cl. 88—16.6.)



1. In panoramic motion picture apparatus, a plurality of lens sets, means whereby the sets may be relatively angularly adjusted, and means for feeding a single strip of film past all of the lens sets collectively.

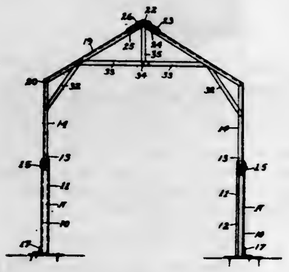
1,347,104. CONNECTING-ROD. JULIUS KINDERVATER, Closter, N. J. Filed May 3, 1919. Serial No. 294,415. 6 Claims. (Cl. 74—17.)

1. The combination with a piston, of a connecting rod provided at one end with a cylindric portion extending transversely of the rod and forming an integral journal, and means for connecting such cylindric portion to the piston, such means comprising a pair of independent one piece yokes secured to the piston, each yoke completely encircling said cylindrical portion.



1,347,105. AIRPLANE-LAUNCHING APPARATUS. LOUIS JOHN LE MESURIER, Newcastle-upon-Tyne, England, assignor of one-half to Sir W. G. Armstrong Whitworth & Company Limited, Newcastle-upon-Tyne, England. Filed May 5, 1920. Serial No. 379,120. 10 Claims. (Cl. 244—2.)

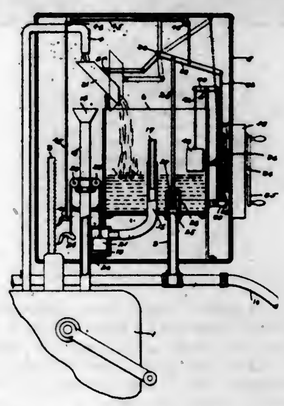
8. In apparatus for launching an air plane from a restricted area, the combination of a track, a carriage adapted to travel thereon, a cylinder having exhaust ports, a piston therein adapted to impart acceleration to the carriage, a flexible connection between said piston and the carriage, a second cylinder having exhaust ports, a retarding piston therein, a flexible connection between said retarding piston and the carriage and valve mechanism between the two cylinders whereby the exhaust ports of the



retarding cylinder are automatically opened during acceleration and similarly closed during retardation and return when the exhaust ports of the accelerating cylinder open.

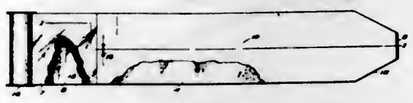
1,347,106. METHOD AND APPARATUS FOR DETERMINATION OF MOISTURE IN SOLID MATERIALS. LAWRENCE E. MCALLISTER, Bellaire, Ohio. Filed May 8, 1919. Serial No. 295,648. 3 Claims. (Cl. 73—24.)

1. Apparatus for determination of the moisture content of solid material, comprising, in series, means for drying air and determining the temperature of said dry air, means for containing a sample of the material under observation in such fashion as to permit passage of air through the sample, means for determining the change in temperature of the sample, means for determining the rate of flow of air through the apparatus, and means for producing such flow.



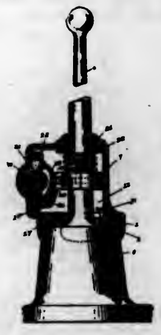
1,347,107. COLLAPSIBLE TENT-FRAME. JOSEPH L. MCCANN, JOHN P. MCCANN, and JAMES MCCANN, Bridgeport, Conn. Filed Apr. 9, 1920. Serial No. 372,562. 4 Claims. (Cl. 135—4.)

3. A collapsible supporting frame for tents comprising a series of foldable sections adapted to be connected together including posts formed of a bottom channel section having ways in its opposite portions, a smaller channel piece adjustably connected to the lower section and adapted to slide into the bottom section, a rafter the lower end of which is hinged to the upper post section and the upper end to the end of the abutting rafter, adjustable braces hinged to the said posts and extending to the ground, and adjustable ridge pieces for rigidly connecting the top ends of the rafters.



1,347,108. LIQUID-DISPENSING MACHINE. CHARLES O. MCCASLAND, St. Louis, Mo. Filed Oct. 10, 1919. Serial No. 329,674. 8 Claims. (Cl. 221—100.)

1. In a liquid dispensing device, the combination of a plurality of measuring tanks of different capacity, a discharge common to said tanks, a pump common to all of said tanks, conduits from said pump to said tanks, normally out of the path of flow of liquid from the pump, and means to select and move one of said conduits into

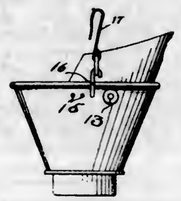


the path of the flow of the liquid from the pump and over a predetermined tank.

1,347,109. FILM-CARTRIDGE. ARTHUR W. MCCURDY, Victoria, British Columbia, Canada. Filed Apr. 26, 1917, Serial No. 164,693. Renewed Nov. 18, 1919. Serial No. 338,807. 9 Claims. (Cl. 95—9.)

1. A film cartridge comprising in combination a strip of film; a protecting strip longer than said film strip; an extension strip of substantial length connected to said protecting strip; a fastener connecting one end of said film strip to said extension strip; and a spool on which said film and strips are wound together.

1,347,110. GEAR-SHIFT LOCK. ARTHUR E. MCDONALD, San Francisco, Calif. Filed Sept. 27, 1919. Serial No. 327,350. 4 Claims. (Cl. 70—128.)

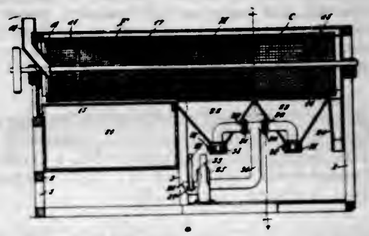


1. In a lock, the combination of a gear shift lever, a fixed part supporting said lever, a collar surrounding said lever and attached thereto at a point near said fixed support, a spring surrounding said lever and abutting said collar, a movable casing surrounding a portion of said lever adjacent said support, said casing also surrounding said collar and said spring, a bushing carried by said casing and contacting with said spring, a ring attached to said casing and adapted to engage said support when said casing is forced downward against the tension of said spring, and means for holding said ring against said support and against the tension of said spring.

1,347,111. ROD-JOINT. JOHN F. MARSHALL, Ashland, Wis. Filed July 9, 1919. Serial No. 309,661. 3 Claims. (Cl. 287—111.)

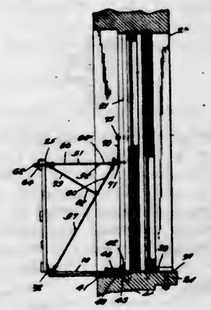
1. In a device as set forth, the combination with a body member having on one edge a longitudinally extending groove semi-circular in cross-section, for the reception of a rod, said body having opposite yieldable parts provided with lateral yieldable flanges, of tapered clamps semi-circular in cross-section to fit the rod and provided with overlying grooved flanges, to coöperatively receive the flanges of the body member, the end portion of the body member having opposing yieldable parts, which are drawn toward each other and in contact with the rod, as the clamps are moved into engagement with the body member, the ends of the opposing yieldable parts having an arched strip integrally connecting said parts.

1,347,112. KITCHEN UTENSIL. LEO J. MERFELD, Cascade, Iowa. Filed Jan. 10, 1918. Serial No. 211,211. 1 Claim. (Cl. 221—23.)



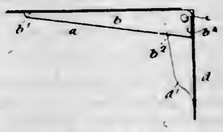
The herein described kitchen utensil for use as set forth, the same comprising a body flaring from its lower to its upped end, a flaring flange rising above the upper end and extending substantially half way around the same, links connected with the body at points substantially coincident with the ends of said flange, and spring clasps whose bends stand in alinement and in a plane through said links, each clasp having one leg connected with one of the links.

1,347,113. TURNTABLE FOR PHONOGRAPHS. JOSEPH G. MERRIAM, Meriden, Conn., assignor to J. G. Merriam Company, Meriden, Conn., a Firm composed of J. G. Merriam, A. W. Foster, and E. A. Merriam. Filed June 22, 1917. Serial No. 176,256. 2 Claims. (Cl. 274—39.)



1. A turn-table for phonographs embodying a relatively thin, circular, cast plate provided with a centrally disposed hub and having a relatively deep, narrow, faced flange depending from the outer circumference thereof, and a peening flange of less depth but greater width than the face of the circumferential flange also depending from the under side of the plate in a position directly adjacent the circumferential flange.

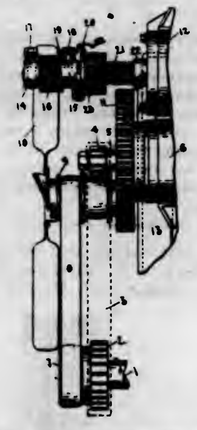
1,347,114. GRITS-SEPARATING MACHINE. JAMES DUDLEY MOORE, North Wilkesboro, N. C. Filed Apr. 27, 1917. Serial No. 165,003. 1 Claim. (Cl. 130—16.)



In a grits separating machine the combination with a hopper having a tubular outlet in the bottom thereof, there being a longitudinal slot in the wall of said outlet, of a baffle ring slidably mounted in the tubular outlet, means extending therefrom and within the slot for holding the ring against sliding movement, a suction fan, and a valved pipe extending to the inlet of the fan, said pipe having its inlet end above, and concentric with the axis of the baffle ring, said ring being adjustable bodily toward and from the pipe.

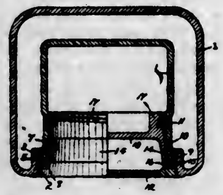
1,347,115. FOLDABLE WINDOW-SEAT. JOSEPH MORELLI, Brooklyn, N. Y. Filed July 29, 1918. Serial No. 247,222. 2 Claims. (Cl. 304—24.)

1. In combination with a window seat including a seat member having a pair of spaced pins protruding from the forward edge thereof, a pair of supporting bars for said seat member, each embodying a rearwardly projecting straight body part adapted to be secured to a window-sill and having a hook at its forward end, a vertical arm rigid with and depending from said body part and having an aperture therethrough, and a forwardly extending longitudinal arm projecting from the bottom edge of said vertical arm and upon which said seat member rests, said pins each projecting into the aperture of one of said vertical arms, and hooks carried by the seat member adjacent said pins and adapted to engage the hooks of the supporting bars to retain said seat member against displacement from the window-sill.



1,347,116. BRACKET FOR SHELVING AND THE LIKE. JOHN HENRY MORGAN, Kent, England. Filed Dec. 26, 1919. Serial No. 347,548. 4 Claims. (Cl. 248—18.)

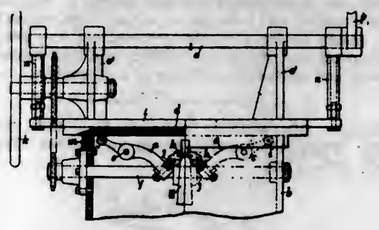
1. A bracket comprising a flanged supporting arm and a flanged attaching arm pivotally connected thereto near



the inner ends of the arms, the supporting arm being provided with extending flange portions for engaging adjacent flange faces of the attaching arm to sustain the strain upon the supporting arm, and means engaging said flange portion and engaging said adjacent flange faces for retaining the flange portions and flange faces in engagement, and for securing the arms to a plane surface in operative relation to each other.

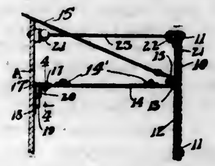
1,347,117. POWER-TRANSMISSION MECHANISM. WILLIAM B. MOSES, Brookline, Mass., assignor to Gray & Davis, Incorporated, Cambridge, Mass., a Corporation of Massachusetts. Filed Feb. 23, 1917. Serial No. 150,294. 4 Claims. (Cl. 74—7.)

1. Apparatus of the character described, comprising a driven member, a driving member normally disengaged from the driven member, a motor, rotary means actuated by the motor to cause the engagement of the driving and driven members, and a stop carried by said rotary means adapted to prevent accidental engagement of said members when the motor is not running, and adapted to be moved to inoperative position by centrifugal force when the motor is running.



1,347,118. SAFE. MOSES MOSLER, New York, N. Y., and CARL BARTELS, Hamilton, Ohio, assignors to The Mosler Safe Company, New York, N. Y. Filed Sept. 22, 1919. Serial No. 325,579. 7 Claims. (Cl. 109—1.)

1. A shell provided with a door opening and a rearward prolongation at the margin of said opening, an inner compartment having a wall adapted to pass through said opening, means for securing the front portion of said wall within said rearward prolongation, and a door having a periphery fitting partly within said opening in the shell and partly within the front portion of said wall.



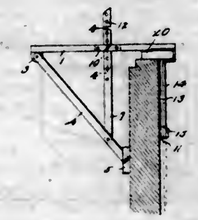
1,347,119. FOUNDRY MOLDING-MACHINE. WILLIAM MARTIN O'KEEFE, Birmingham, England. Filed Aug. 11, 1919. Serial No. 316,848. 4 Claims. (Cl. 22—45.)

1. In foundry molding machines, the combination with a body, a movable plate supported on the body and arranged to carry a molding box and pattern, levers pivoted on the body with ends adjacent and the outer ends located beneath the plate, and a rotary wedge like cam adapted during a part of its rotation to act on the adjacent ends

of the levers for raising the outer ends with the plate, the levers and plate being permitted to return by free falling of the plate when released by the cam, substantially as described.

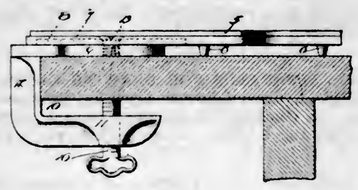
1,347,120. SHIP-PROTECTOR. JOHN PABICH, Mount Carmel, Pa. Filed Jan. 9, 1919. Serial No. 270,308. 3 Claims. (Cl. 114—240.)

1. In a ship protector, the combination with a shield section and its supporting frame, and a pair of loops adapted to be attached to the hull; of a pair of arms hinged at their outer ends to said frame, a hinge having one leaf connected with the inner end of each arm, a tongue attached to the other leaf and adapted to be dropped into said loop, a right angular stop having one leaf secured beneath the arm and the other engaging said loop when the arm stands horizontal, rods pivotally connecting the frame and hull, and means for raising the frame.



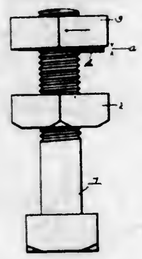
1,347,121. CANVAS-ADJUSTER. OSCAR J. RICE, Libby, Mont. Filed Dec. 19, 1919. Serial No. 345,057. 1 Claim. (Cl. 64—52.)

In a device of the class described, spaced supporting members, spaced upper and lower guides carried by each of said members, a member assembled with each of said supporting members and comprising a head and spaced arms extending therefrom, the said arms slidably engaging the upper and lower guides upon the said supporting member, a roller journaled between the heads of the second-mentioned members, one arm of each of said second-mentioned members being of rack formation, a shaft journaled in the supporting members, and pinions carried by the said shaft meshing with the said racks.



1,347,122. WINDOW-SEAT. PHILLIP L. RILEY, Blairsville, Pa. Filed Feb. 19, 1920. Serial No. 360,012. 2 Claims. (Cl. 304—27.)

1. A window seat of the class described comprising a platform, a pair of window-sill engaging legs fixedly attached to one transverse edge of said platform, swinging legs pivotally attached to the other transverse edge of

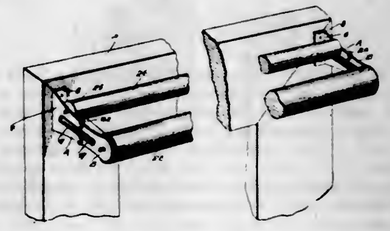


said platform, said swinging legs provided with feet pivotally carried on free terminals, and means for holding said swinging legs in any desired position.

1,347,123. FLATIRON-HOLDER. AARON L. MANN, Grand Rapids, Mich. Filed Feb. 12, 1919. Serial No. 276,650. 1 Claim. (Cl. 68—27.)

In a flat iron holder, the combination of a flat iron rest provided on its under side with a plurality of short legs for contact with the surface of a table or the like, the rest being provided on its under face near one end with an annularly disposed row of teeth countersunk within said surface, a bracket member having a flat surface for contacting the under surface of the rest and an upstanding tooth adapted to interlock with a selected depression between two teeth in the countersunk row on the rest, a screw freely entered through the rest and having its head countersunk within and exposed through the upper surface thereof for facilitating adjustment, the lower end of the screw being threaded into the upper jaw member in concentric relation to the row of annularly disposed countersunk teeth on the rest, and adapted when tightened to hold the rest in clamped relation to the jaw, substantially as described.

1,347,124. LOCK-NUT. JOHN R. SCHRADER, New York, N. Y., assignor to Dieter Nut Company, New York, N. Y., a Corporation of New York. Filed Apr. 17, 1919. Serial No. 290,768. 2 Claims. (Cl. 151—20.)

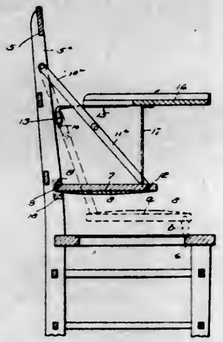


1. A lock nut of the character described, having its entire face shaped as a helical surface, of the same pitch as the thread.

1,347,125. PROJECTILE FOR BOMB-THROWERS. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed Feb. 28, 1919. Serial No. 279,877. 6 Claims. (Cl. 102—29.)

4. A bomb-thrower having a barrel to receive the propelling charge and a muzzle on the barrel having a tubular extension, in combination with a projectile comprising a fusiform casing to contain the bursting charge, a tube inserted in the casing to form therein an axial chamber separated from the bursting charge and adapted to receive the thrower-barrel preliminary to a discharge, and a hollow block to be inserted in the axial chamber in advance of the barrel, said block being open at its front into the axial chamber and having in its rear a vent for the insertion of the tubular extension of the muzzle so that the discharge gases from the barrel will pass into the axial chamber in front of the block, said block at the discharge sliding to the rear of the axial chamber at the recession of the barrel therefrom to partially confine in such chamber the gases from the discharge explosion, the confined gases gradually escaping through the vent in the rear of the block to aid in the propulsion of the projectile after the latter leaves the bomb-thrower.

1,347,126. COMBINED CURTAIN-POLE AND WINDOW-SHADE BRACKET. ELLA R. SELL, Spokane, Wash. Filed Nov. 10, 1919. Serial No. 336,823. 3 Claims. (Cl. 156—24.)

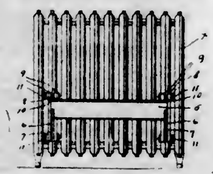


3. In a curtain pole support, the combination with a pair of brackets, each bracket including a body portion and an extension connected thereto for outwardly swinging movements, and a yieldable means connecting the body portion and the extension of each bracket for normally holding said extension against outward movement.

1,347,127. CONVERTIBLE CHAIR. SIDNEY SINGLETERRY, Dallas, Oreg. Filed Jan. 28, 1920. Serial No. 354,686. 1 Claim. (Cl. 155—132.)

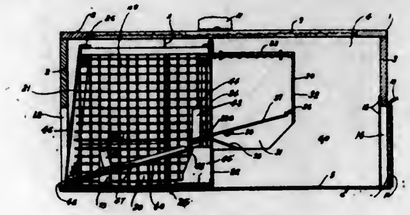
A device of the character described comprising in combination with an ordinary dining chair a section having one of its faces upholstered, said sections being detachably hinged at its lower corners to the side posts of the back of the chair and being adapted to swing from a position where it lies substantially vertically between the side posts of the chair to a position where it lies substantially horizontal, links pivotally connected to each other and to the side posts of the chair and to the said section at a point upon the edges of said section remote from the hinge connections thereof, said links serving when the said section is thrown downwardly upon its hinge connections to support said section horizontally at one level

above the seat proper of the chair and serving when said section is disconnected from said hinge connections



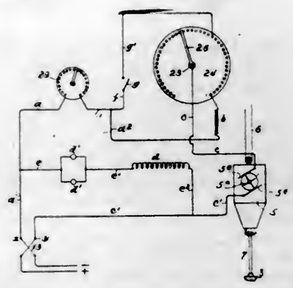
and swung over upon the pivotal connections of the links therewith to support said section at a lower level but above the seat proper of the chair.

1,347,128. DEMOUNTABLE-RIM-FASTENING MEANS. DAVID LAWRENCE SPERO, Brownsville, Tex. Filed Oct. 22, 1919. Serial No. 332,442. 8 Claims. (Cl. 301—20.)



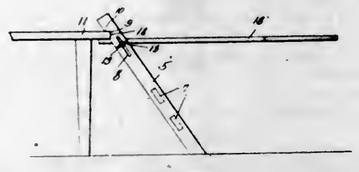
1. A device of the class described including a bolt adapted to engage and extend transversely of the felly of the wheel with portions projecting from opposite sides of the felly, a rim-engaging member on one end portion of the bolt, a lever, connections leading from opposite end portions of the bolt, the lever being pivotally connected with said connections and adapted to be swung in one direction to clamp the rim-engaging part in rim-holding position.

1,347,129. FOOTREST FOR RADIATORS. CLYDE R. SQUIRES, Baylor, Mont. Filed Oct. 23, 1918. Serial No. 259,356. 2 Claims. (Cl. 155—168.)



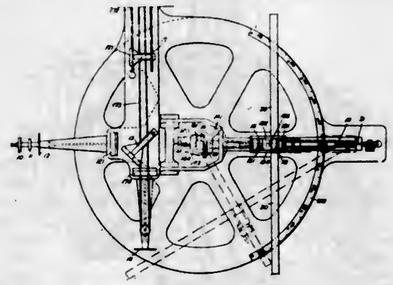
1. In a foot rest for radiators, the combination with a pair of clips adapted to embrace one coil of the radiator and a like pair adapted to embrace another coil, the arms of each clip being connected by a cross bolt, and upright angle bars mounted on the bolts of each pair and spaced to form a guide; of a U-shaped frame whose limbs have heads slidable vertically in said guides, and braces pivoted at their upper end to the frame and at their lower ends on the lower bolts.

1,347,130. TRAP. JOSEPH W. STEVENSON, Baltimore, Md. Filed Apr. 19, 1920. Serial No. 374,946. 3 Claims. (Cl. 43—67.)



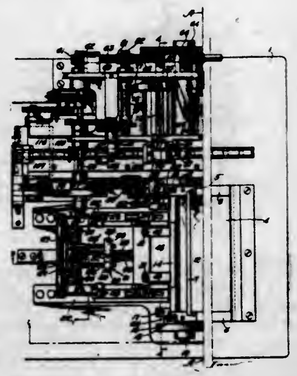
1. In a device of the class described, a box-like cage having transverse walls defining bait compartments, the cage having a doorway whereby an animal may enter the cage, have free access to the compartments and leave the cage; and a trapping mechanism comprising a doorway coöperating with the doorway of the cage, and means for preventing an animal from leaving the casing and the cage through the doorways, the casing being removably mounted between the walls and having foraminous sides rendering the bait compartments visible but preventing access thereto.

1,347,131. APPARATUS FOR DRAWING GLASS CYLINDERS. LAURENCE EDWIN STEWART, Bradford, Pa., assignor to Consolidated Machine Company, Bradford, Pa. Filed Aug. 8, 1919. Serial No. 316,148. 4 Claims. (Cl. 49—17.1.)



1. The combination with hoisting means, a fan and an electric motor for the fan, of an electric circuit including said motor, a rheostat operable automatically by the hoisting means, a manually operable rheostat, said rheostats being included in series in the motor circuit, and a switch for excluding a portion of the resistance elements of one of said rheostats from the motor circuit.

1,347,132. IRONING-BOARD. DEWEY TROUTMAN, Hawarden, Iowa. Filed Mar. 31, 1920. Serial No. 370,223. 1 Claim. (Cl. 68—10.)

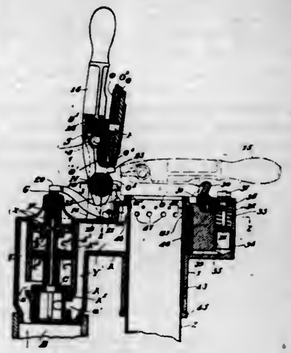


In an ironing board, a supporting member comprising side rails having notches in their edges to form shoulders for engaging the top and edge of a table top, the said side rails having slots extending longitudinally and terminating below the said notches, a rod adjustable in the said slots, the said rod having threaded ends projecting through the slots, clamping members threaded on the said rod and bearing against the rails, members on the said rod for holding the rails in spaced relation to each other, and an ironing board having a portion overlying the said rod and adapted to project under a table top whereby the said board is wedged between the said table top and the said rod.

1,347,133. APPARATUS FOR TESTING LENSES. FRANK TWYMAN, London, England, assignor to Adam Hilger, Limited, London, England. Original application filed Feb. 4, 1919, Serial No. 274,843. Divided and this application filed Apr. 23, 1919. Serial No. 292,042. 5 Claims. (Cl. 88—56.)

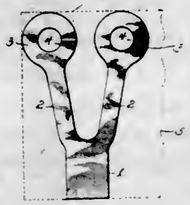
1. An apparatus for testing a lens comprising a plane parallel glass plate partially silvered and adapted to reflect part of a beam of light and to transmit a part, two mirrors adapted to reflect the light back to the plate and mounted so that their distances from the plate can be varied, a carriage adapted to adjustably receive the lens to be tested and maintain the same in the path of light to and from one of said mirrors, means for moving the lens on the carriage both along and at right angles to its optical axis and means for turning the carriage about an axis at right angles to the optical axis of the lens.

1,347,134. SHEET FEEDING AND CUTTING MECHANISM. JAMES N. TZIBIDES, New York, N. Y., and RILEY HERBERT PARKER, Winthrop, Mass.; said Parker assignor to said Tzibides. Original application filed Feb. 19, 1915, Serial No. 9,232. Divided and this application filed Mar. 2, 1918. Serial No. 219,974. 17 Claims. (Cl. 164—48.)



1. In a machine of the character described, the combination of a sheet magazine, spacers for holding the sheets in spaced relationship at the delivery end of the magazine, grippers for seizing the spaced end of a sheet, and means for actuating the grippers to draw a sheet from the magazine.

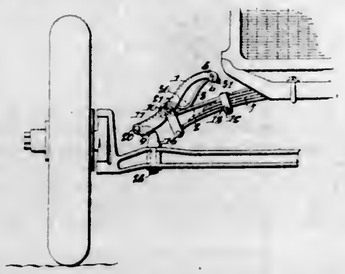
1,347,135. MUSIC-LEAF CLIP. PETER VAN VALKENBURG, Otterville, Ontario, Canada. Filed Apr. 1, 1919. Serial No. 286,810. 2 Claims. (Cl. 24—252.)



1. A music leaf turner including a pair of spring pressed jaws adapted for engaging a sheet of music, the rear end portions of said jaws being provided with tabs extended outwardly at acute angles to provide manipulating portions, said manipulating portions being extended over the edges of the adjacent sheets of music whereby the same may be readily engaged by the fingers.

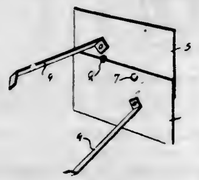
1,347,136. TERMINAL FOR PNEUMATIC-DESPATCH-TUBE SYSTEMS. ALEXANDER WATSON, Atlantic, Mass., assignor of one-half to William G. Mitchell, Malden, Mass. Filed Nov. 7, 1919. Serial No. 336,255. 11 Claims. (Cl. 243—14.)

1. Pneumatic despatch tube for apparatus having therein a despatch tube, a cover for the terminal of the tube, means to hold the cover closed, a valve for admitting air to the tube to propel a carrier, means for opening the valve active upon closure of the cover, and pneumatic means operating as a consequence of releasing the cover for closing the valve.



1,347,137. MANUFACTURE OF JAWS FOR BRAKE-ROD CONNECTIONS. ROBERT R. WEAVER, Columbus, Ohio. Filed Aug. 9, 1918. Serial No. 249,171. 1 Claim. (Cl. 29—164.)

The method of making a jaw of the character described, consisting in cutting from a plate of metal, a blank hav-



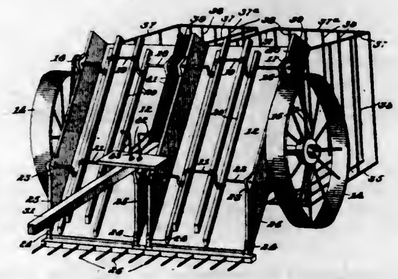
ing two arms radiating from a shank member and having perforated heads at their free ends; twisting said radiating arms one-fourth of a turn, and afterward bending the twisted arms toward each other until their heads become parallel.

1,347,138. SHOCK-ABSORBER. CHARLES A. WIBERG, Duluth, Minn. Filed Nov. 11, 1919. Serial No. 337,144. 5 Claims. (Cl. 267—19.)

1. In a shock absorbing means for road vehicles, a fixed support on the vehicle, the main spring, an oscillating lever pivotally connected at its lower end to a fixed support on the vehicle and having means at the pivotal end for limiting its oscillation in one direction, a link connection that joins the outer end of the vehicle main spring and the lever, and an auxiliary looped spring, the loop of which engages the pivotal connection that joins the link and the lever, one end of the said looped spring having a fixed connection with the main spring and the other end of the said auxiliary spring having a slidable connection with the outermost end of the pivoted lever, the said outermost end of the lever and the free end of the spring that engages it having cooperating means to limit the rebound oscillation of the lever.

1,347,139. FLUE-CLOSURE. WILLIAM C. ADAMS, Lincoln, Nebr. Filed Dec. 22, 1919. Serial No. 346,457. 1 Claim. (Cl. 126—319.)

A closure for closing either end of a flue opening comprising a pair of rectangular plates, each plate having one of its marginal edges pivoted to the adjacent marginal edge of the other plate, a lug carried by one of said plates in spaced relation to the pivotal connection of said plate, and resilient elongated retaining arms connected to the plates in spaced relation to each other, the greater portion of said arms adapted to be engaged with the walls of the flue opening, said lug engaging the edge of the adjacent plate, whereby pivotal movement of the plates toward the center of the flue opening is prevented when the plates are disposed over the end of the flue opening.

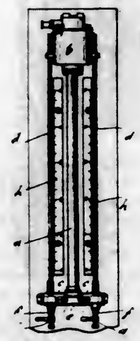


1,347,140. OPHTHALMIC MOUNTING. ARTHUR A. ARNOLD, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Jan. 2, 1918. Serial No. 210,031. 2 Claims. (Cl. 88—47.)

1. An ophthalmic mounting including a metallic frame member, a non-metallic portion, and means for connecting the said parts, including an attaching plate having an upstanding perforated tongue and projections on the

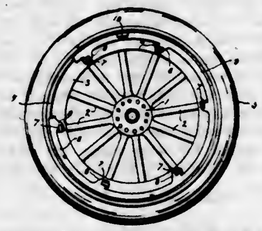
non-metallic member interlocking with the perforations on the tongue for connecting the parts.

1,347,141. HAY-COCKER. G HENRY BENNET, Springdale, Mont., assignor of one-half to William Hruza, Livingston, Mont. Filed Mar. 22, 1919. Serial No. 284,270. 1 Claim. (Cl. 56—361.)



In a hay cocker, the combination with a wheeled frame comprising an inclined platform, of a hay gathering rake pivotally mounted at the lower end of said platform, means for adjusting said rake to different working positions, walking rakes for carrying the hay upward and over said platform, and dumping receptacles receiving the hay at the rear of the machine, said platform being provided with strips to form two troughs between which troughs the draft tongue or pole of the machine is mounted.

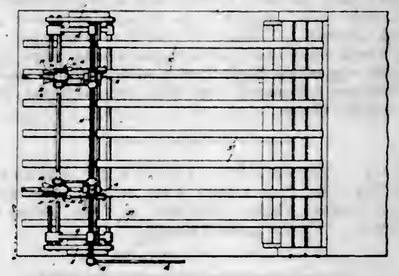
1,347,142. COMBINED COFFEE-PERCOLATOR AND TEA-STEEPER. HENRY C. BIETTE, Buffalo, N. Y., assignor of one-half to John Thomson and one-half to Paul C. Wasasier, Buffalo, N. Y. Filed Apr. 11, 1917. Serial No. 161,195. 6 Claims. (Cl. 53—3.)



1. A utensil of the kind described, comprising a pot provided with a pouring spout and exterior projecting portions, a holder into which said pot is placed provided with portions engaging the exterior projecting portions of said pot to hold the latter within said holder, a coffee container having its lower portion fitting into the upper portion of said pot, and a supporting member having a straining element and being adapted to support said coffee container.

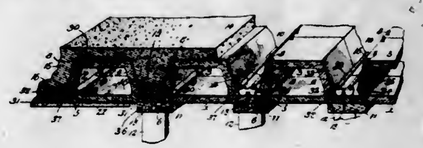
1,347,143. APPARATUS FOR MEASURING THE FLOW OF LIQUIDS. CLEMENT BROWN, Birmingham, England. Filed Dec. 18, 1917. Serial No. 207,701. 3 Claims. (Cl. 73—167.)

1. Apparatus for measuring the flow of liquids, including a constant level chamber, a supply conduit descending therefrom, a trifurcation forming the terminal of said conduit and communicating with said conduit through a calibrated orifice, a vertically extending tube rising from one branch of said trifurcation, an outlet pipe secured to the second branch, and a test outlet secured to the third branch of said trifurcation, said test outlet having a calibrated orifice and permitting discernment of a particular rate of flow under varying temperature conditions.



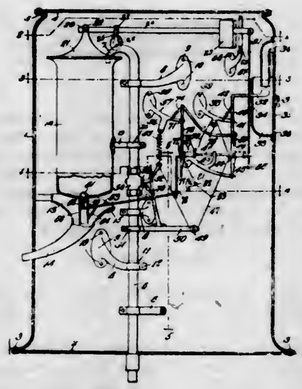
1,347,144. DEMOUNTABLE RIM FOR AUTOMOBILE-WHEELS. WILLIAM J. BRUCE, Sterling, Ill. Filed June 23, 1919. Serial No. 306,248. 1 Claim. (Cl. 152—21.)

In a device of the class described, in combination with a wheel and an auxiliary rim mounted removably thereon, a series of bolts fixed in the felly of said wheel, and provided with engaging members on their outer ends; a ring adapted to hold said auxiliary rim in place on said wheel; a plurality of lugs projecting inwardly from said ring and adapted for connection with said bolts and engaging members; and a lock-pin removably held in one of said lugs, and capable of holding such lug and the accompanying bolt from accidental release.



1,347,145. SLOW-DOWN SHEET-STRAIGHTENER. CARL E. CHRISTOPHEL, Pearl River, N. Y., assignor to Dexter Folder Company, Pearl River, N. Y., a Corporation of New York. Filed Nov. 10, 1919. Serial No. 336,833. 6 Claims. (Cl. 271—46.)

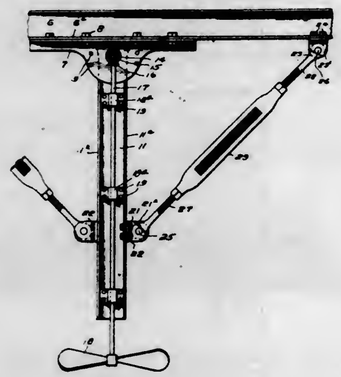
1. In a machine of the character described, the combination of a track bar, a carriage reciprocable on said track bar, sheet engaging means movable on said carriage into and out of sheet engaging position, and camming elements mounted respectively on said carriage and track bar, one of said camming elements being movable



transversely to the plane of operation of the other of said camming elements to render said camming elements periodically active.

1,347,146. FLOOR AND CEILING CONSTRUCTION. JAMES G. DAVIS, Buffalo, N. Y. Filed Nov. 7, 1918. Serial No. 261,529. 6 Claims. (Cl. 72—66.)

3. A floor and ceiling construction comprising a plurality of porous body sections arranged adjacent to each other and forming between them a plurality of channels, a plurality of supports arranged in said channels and each having horizontal feet embedded in these portions of said body sections forming the bottom of said channels, legs rising from said feet and a crimped cross bar connecting the upper ends of said legs, reinforcinig bars arranged in said channels and resting on said cross bars, and a mass of concrete extending over said sections and into the channels between the same and embedding said reinforcing bars and upper parts of said supports.



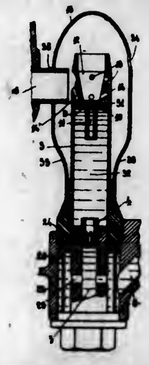
1,347,147. AUTOMATIC GASOLENE-DISPENSING MACHINE. FRED C. DENNIS, Blair, Okla. Filed Sept. 27, 1917. Serial No. 193,541. 4 Claims. (Cl. 249—2.)

1. In a device of the class described, the combination of a casing having a fuel supply pipe, including a valve,

yieldable means for turning the valve in one direction, a weight pivotally mounted within said casing, a flexible cable connected to said weight and said valve, a trip lever having a head normally holding said weight in a set position, said lever adapted to be engaged by a coin and thereby shifted to release the weight, whereupon the weight will release said cable to allow said valve to be operated, and means for returning said weight to its normal position, whereupon said cable will move the valve to a closed position.

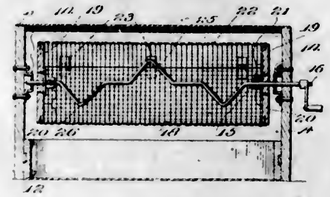
1,347,148. PROPELLING AND DRAFT-REDUCING MECHANISM FOR SHIPS AND BOATS. CON DRISCOLL, Coalinga, Calif. Filed Mar. 24, 1920. Serial No. 368,447. 4 Claims. (Cl. 115—34.)

1. The combination with the hull of a vessel of a horizontal driven shaft, a swinging propeller carrying element mounted to swing about said shaft, a propeller shaft carried thereon, intermeshing beveled gears upon the propeller shaft and the horizontal shaft respectively and members adjustable as to length and rigid when set, pivotally connected to said swinging element and to an element carried by the hull.



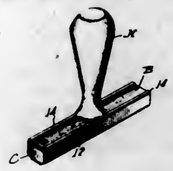
1,347,149. POWDER-RECEPTACLE. GABRIEL FELSENTHAL, Chicago, Ill. Filed Dec. 20, 1919. Serial No. 346,345. 1 Claim. (Cl. 132—34.)

An article of the class described comprising a box and a container for powder held in the bottom thereof and comprising two oppositely dished members, the upper dished member having an inturned peripheral flange, a filling opening in said member, a cover member superimposed upon said upper member, and a rivet connecting the central portion of said three members.



1,347,150. CARBURETER. ENRICO FEROLDI, Turin, Italy. Filed Mar. 19, 1918. Serial No. 223,267. 3 Claims. (Cl. 299—141.)

1. A nozzle for explosion engine carbureters, comprising a tubular member having a transverse partition in the upper part thereof to divide the tubular member into an upper section and a lower section, said partition having an orifice to form a passage between said sections, said upper section having spraying perforations extending to the outer surface thereof at substantially the same

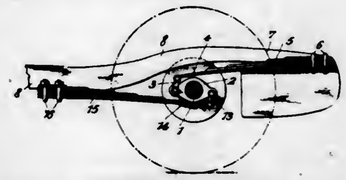


level as a port formed in the wall of the tubular member and extending from said lower section to the outer surface of the tubular member.

1,347,151. DUSTLESS ASH-SIFTER. CHARLOTTE G. FETTE, Shelton, Conn. Filed Oct. 23, 1918. Serial No. 259,369. 1 Claim. (Cl. 83—60.)

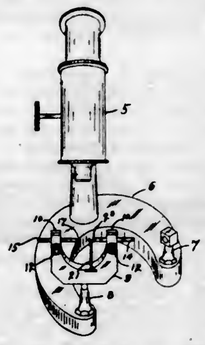
A sifter of the type described, comprising a screen cylinder, a shaft fixedly mounted through the centers of its ends and formed between the latter into V-shaped bends all standing in a single plane and whereof one projects in one direction at the midlength of the cylinder and others near the ends thereof project in the opposite direction, the angles of said bends standing approximately midway between the axis and the wall of the cylinder, and means for supporting the extremities of said shaft and for turning it to rotate the cylinder.

1,347,152. STAMP-MOUNT. HARRY S. FOLGER, Chicago, Ill. Filed Nov. 29, 1918. Serial No. 264,509. 1 Claim. (Cl. 101—368.)



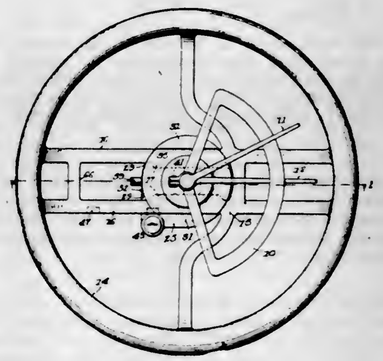
A stamp mount consisting of sheet metal bent to form a stamp-holding channel, the metal forming the sides of such channel being bent back upon itself and extending in the form of hooks located above the outer corners of said channel to form a label-holding channel, and handle-holding projections extending from said hooks and so arranged that upon a handle being placed upon said projections the said hooks will be drawn inward to clamp a label held in the label-holding channel.

1,347,153. ROTARY BRUSH. CLINTON E. FROST, East Cleveland, Ohio, assignor to The Cleveland Osborn Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 28, 1918. Serial No. 259,947. 5 Claims. (Cl. 15—37.)



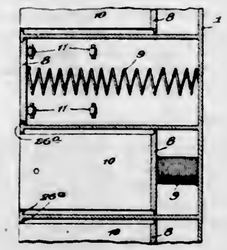
3. The combination with a spindle, of complementary cup-shaped clamp members adapted to be terminally secured to said spindle, and a brush section comprising a base ring, brush material looped upon said ring, and a perforated member of U-shape in cross-section laterally engaging said material, the loops of material passing through the perforations in said member and the latter being dished so as to maintain said material at an angle to the plane defined by said ring, said brush section being held between said clamp members with its open face directed away from said spindle.

1,347,154. SPRING SUSPENSION FOR VEHICLES. EMIL C. GEISSBERGER, Zurich, Switzerland. Filed Nov. 20, 1917. Serial No. 202,939. 4 Claims. (Cl. 267—41).



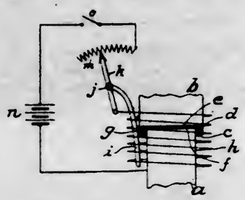
1. A spring suspension for vehicles comprising a spring composed of leaves arranged forwardly of the axle and fixed at one end to the car frame, a second similar spring arranged rearwardly of the axle and connected to the car frame, the end of the longest leaves of the springs lying on opposite sides of a horizontal plane through the axle, and a shackle for connecting the end of the longest leaf of each of said springs to the axle, whereby said springs are enabled to have movement independent of each other.

1,347,155. BALANCE-PIVOT STRAIGHTENER. HERMAN HAEFLIGER, North Platte, Nebr. Filed June 6, 1919. Serial No. 302,359. 4 Claims. (Cl. 88—40.)



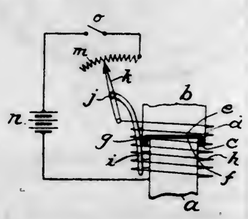
1. In combination, a microscope having a base, and an object holder positioned to present an object in the field of the microscope, said holder comprising two opposing supporting members apertured to receive the pivots of a balance staff, one of said members being cut out to expose the protruding pivot.

1,347,156. STEERING-WHEEL. FRANK R. HANCOCK and RONALD F. HOFFMAN, Kenosha, Wis. Filed May 11, 1917. Serial No. 168,011. Renewed May 1, 1920. Serial No. 378,263. 9 Claims. (Cl. 74—33.)



1. In a steering wheel lock, the combination, with the steering post, of a steering wheel including a spider, a hub member freely revolubly mounted on said post and on which said spider is slidably mounted, a driving connection between the spider and the post when said spider is in one position with respect to the post, and inclosed key controlled means for directly locking the spider to the hub when said spider is in or out of driving engagement with the post.

1,347,157. APPARATUS ON AIRCRAFT FOR RECEIVING AND DELIVERING MAIL AND MERCHANDISE. EARL C. HANSON, Washington, D. C. Filed May 19, 1920. Serial No. 382,646. 4 Claims. (Cl. 244—1.)



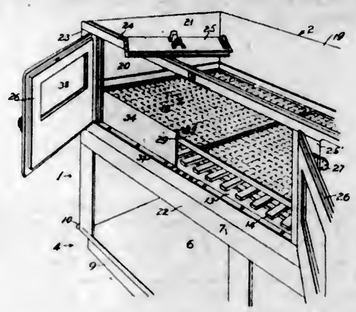
1. In an aircraft member having a streamlined surface, a package forming part of the streamlined surface, means to release the package, and means to automatically complete the streamlined surface upon the release of the package.

1,347,158. PROCESS OF OXIDIZING AMMONIA TO NITRIC ACID. ABRAHAM HENWOOD, Cynwyd, Pa. Filed July 8, 1918. Serial No. 243,758. 7 Claims. (Cl. 23—1.)

1. The improvement in the art of catalytically combining gases which comprises passing the mixture containing the gases to be combined through a diaphragm of catalytic material of such negligible thickness that substantially the entire mass of the catalyzer is active.

1,347,159. PROCESS OF OXIDIZING AMMONIA TO NITRIC ACID. ABRAHAM HENWOOD, Cynwyd, Pa. Original application filed July 8, 1918, Serial No. 243,758. Divided and this application filed Jan. 9, 1919. Serial No. 270,409. 4 Claims. (Cl. 23—1.)

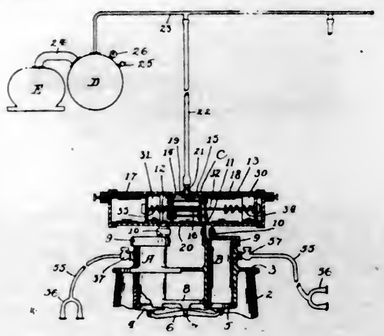
1. The method of keeping down the temperature in the oxidation of ammonia gas into nitric acid which consists in providing for a non-automatic temperature reduction and correcting for excess of reduction by an automatic addition of heat as the lower range of permissible temperature is approached.



1,347,160. PROCESS OF CATALYTICALLY COMBINING GASES. ABRAHAM HENWOOD, Cynwyd, Pa. Original application filed July 8, 1918. Serial No. 243,758. Divided and this application filed Jan. 9, 1919. Serial No. 270,410. 2 Claims. (Cl. 23—28.)

1. The improvement in the art of catalytically combining gases which consists in passing a mixture containing the gases to be combined over a catalyzer supported upon a carrier, and supporting the carrier flexibly to provide for its expansion and contraction under the influence of temperature variations.

1,347,161. REFRIGERATOR-COUNTER DISPLAY-CASE. ANTON N. HORNUNG, Los Angeles, Calif. Filed Nov. 11, 1919. Serial No. 337,254. 6 Claims. (Cl. 211—25.)

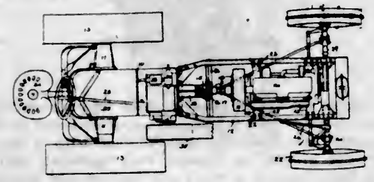


1. A refrigerator display counter comprising a counter section; a receptacle seated in the top of said section; a grid separating the receptacle into upper and lower compartments, the lower compartment being located below the level of the top of the counter section, and the upper compartment being adapted to display the contents of the upper compartment; one side of said case being provided with an opening communicating with both compartments thereof; closure means to close said opening, and supplementary means for closing the lower compartment while said closure means are open to give access to the upper compartment.

5. A display case provided with an entrance at one side, a rail extending from end to end of the entrance;

an apron formed of a sheet and adapted to catch upon the rail and to close the portion of the entrance that is below said rail, and a door to close said entrance.

1,347,162. MILKING-MACHINE. ALBERT C. HOUGLAND, St. Paul, Minn. Filed Apr. 18, 1918. Serial No. 229,374. 3 Claims. (Cl. 31—99.)

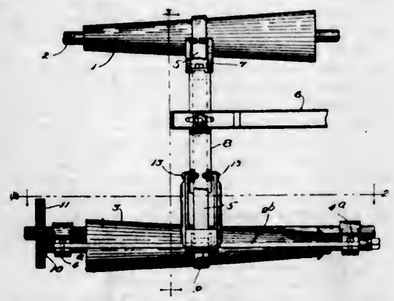


1. A milking machine, comprising, in combination, milk receivers having milk receiving tubes communicating therewith and also having milk discharge passages, check valves movably mounted and adapted to alternately close said passages when air is exhausted from said receivers, an air exhaust pipe, means for exhausting air from said pipe and a pulsator interposed between said pipe and said milk receivers adapted to alternately allow air to be exhausted from and admit air into said receivers automatically.

2. A milking machine comprising in combination, a pair of milk receivers having means for mounting them on a milk receptacle and having milk receiving tubes connected therewith and milk discharge passages, a pair of valves movably mounted and adapted to alternately close said passages when air is alternately exhausted from said receivers, a double air pulsator connected with said receivers, a single air exhaust duct connected with said pulsator and a constant source of air exhaust connected with said duct and remotely distanced from said pulsator, said pulsator being adapted to communicate suction alternately with said receivers.

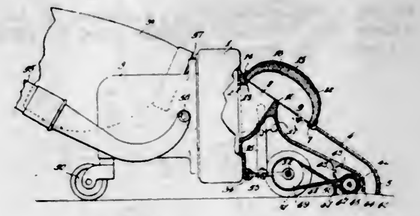
3. A milking machine, comprising, in combination, milk receivers having milk receiving tubes and milk discharge passages, check valves movably mounted and adapted to alternately close said passages when air is exhausted from said receivers, an air exhaust pipe, means for exhausting air from said pipe, a pulsator interposed between said pipe and said milk receivers adapted to alternately allow air to be exhausted from and to admit air into said receivers automatically and means for regulating the length of the pulsations of said pulsator.

1,347,163. TRACTOR. JAMES M. HOWE, Cleveland Heights, Ohio, assignor to The S. W. H. Engineering Company, Cleveland, Ohio, a Copartnership. Filed Nov. 20, 1918. Serial No. 263,322. 15 Claims. (Cl. 180—54.)



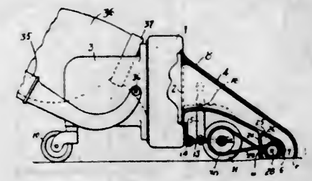
1. In a tractor, a running frame consisting of a rear member housing the gearing and a forward extension member carrying the engine and secured independently of the engine frame directly to the front end of the rear member, whereby the engine may be removed from the running frame without dismembering said frame.

1,347,164. PENWIPER. VIRGIL G. JASPER, Elyria, Ohio. Filed May 9, 1917. Serial No. 167,399. 5 Claims. (Cl. 120—108.)



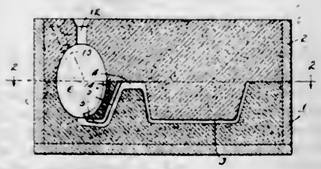
5. In a pen wiper, a body portion, a tongue, said body portion and said tongue being composed of resilient, compressible material, said tongue having an outer U-shaped wall, corresponding inner walls for the body portion, said outer and inner walls being normally so close together as to be forced apart when a pen is inserted, and so related as to engage the pen with increased friction when the pen is withdrawn, said body portion being provided with a dirt-receiving recess above and below the tongue.

1,347,165. FLY-FRAME. JOSEPH H. JONES, Winthrop, Mass., assignor of one-half to Thomas E. Heatley, Winthrop, Mass. Filed Aug. 28, 1919. Serial No. 320,513. 6 Claims. (Cl. 64—4.)



5. A cone and belt system including a cone mounted with capacity for movement to slacken the cone-belt, a shifter-bar, a belt-guide controlling the belt at its point of ongoing tangency to the cone, and a link-member through which traversing movement is imparted to said belt-guide from said shifter-bar.

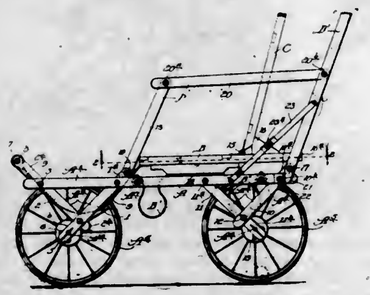
1,347,166. SUCTION-CLEANER. JAMES B. KIRBY, Cleveland, Ohio, assignor to Electric Vacuum Cleaner Company, Inc., a Corporation of New York. Filed July 9, 1915. Serial No. 38,862. 2 Claims. (Cl. 15—60.)



1. In a suction cleaner, a casing having an inlet mouth and a fan chamber, a seating portion located between the inlet mouth and fan chamber, there being a pair of openings through said seating portion and communicating respectively with said inlet mouth and fan chamber, said seating portion being adapted to receive either a cover adapted to place said openings in communication or a plate having a hose connection communicating with the fan chamber opening, and means for securing either said cover or said plate to said seating portion.

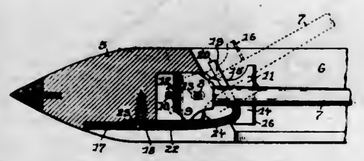
1,347,167. SUCTION-CLEANER. JAMES B. KIRBY, Cleveland, Ohio, assignor to Electric Vacuum Cleaner Company, Inc., a Corporation of New York. Original application filed July 9, 1915, Serial No. 38,862. Divided and this application filed July 12, 1917. Serial No. 180,057. 7 Claims. (Cl. 15—60.)

1. In a suction cleaner, a collecting nozzle having a narrow, elongated, downwardly-facing suction mouth, transversely arranged, a rotatable agitating device journaled to said nozzle parallel to said suction mouth and in operative relation therewith, a bracket pivoted to said casing upon an axis parallel to said agitating device, a rotatable shaft journaled to said bracket upon an axis parallel with such pivot, movement-transmitting mechanism operatively connecting said shaft and agitating device, and means for adjusting said bracket angularly about its pivot, said agitating device, bracket pivot, and shaft being substantially in the same plane.



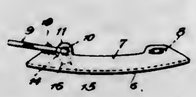
1,347,168. PROCESS OF MAKING MOLDS. AUGUST KUZNIK, Cleveland, Ohio, assignor of three-fourths to Andrew Lillie, Cleveland, Ohio. Filed July 11, 1919. Serial No. 310,148. 4 Claims. (Cl. 22—134.)

1. A mold having a molding cavity, a separating chamber provided with a concave bottom, a trapped outlet



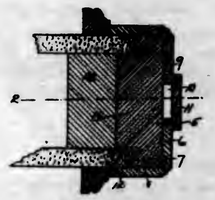
leading from the central portion of such bottom to the molding cavity, and a pouring gate for delivering molten metal to said chamber tangentially thereof.

1,347,169. PERAMBULATOR. ALEXANDER B. LEITH, Chicago, Ill. Filed Dec. 28, 1918. Serial No. 268,650. 5 Claims. (Cl. 280—39.)



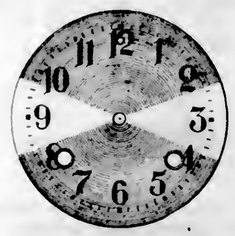
1. In a perambulator, a running gear-frame comprising wooden side-bars, Y-form wooden axle-supports, each having upwardly divergent arms rigidly connected with the corresponding side-member of the frame, one of said bars having a downward extension affording an axle-support, axles carried by said axle-supports, and cross-members connecting the side-members of the running gear-frame.

1,347,170. LOOM-SHUTTLE. SAUL R. LIBERTY, Pawtucket, R. I. Filed Oct. 15, 1919. Serial No. 330,890. 3 Claims. (Cl. 139—89.)



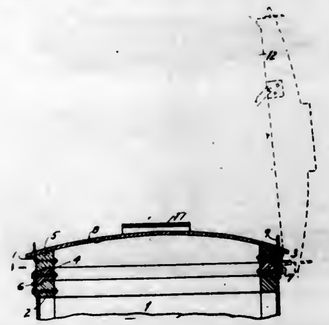
3. A spindle spring for a loom shuttle having a bent up U-shaped end, the arms of the U-shaped end terminating in cam surfaces which engage with and release the spring arms of the bobbin clamping member from the bobbin, as described.

1,347,171. BUCKLE. CREIGHTON S. MACDONALD, Attleboro, Mass. Filed Feb. 14, 1920. Serial No. 358,577. 2 Claims. (Cl. 24—170.)



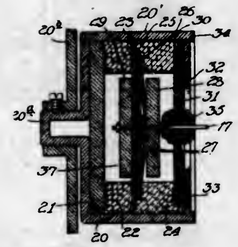
1. A buckle comprising a relatively-fixed part, a member pivotally mounted therein formed of a substantially flat sheet-metal body, and a rib member of sheet metal including a web lying against and secured to said pivotally-mounted member and a transverse clamping-rib formed by bending a marginal portion of the material into a loop raised above the plane of the web.

1,347,172. DOOR-FRAME AND SIMILAR STRUCTURE. THOMAS MALCOLM, Hartford, Conn. Filed Feb. 9, 1920. Serial No. 357,406. 5 Claims. (Cl. 20—11.)



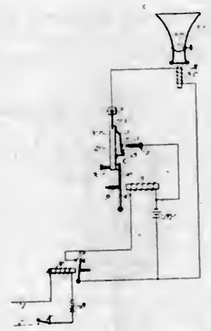
1. A frame for a wall opening, said frame comprising a member formed from a single piece of material having an integral ground on one edge thereof with a recess back of the ground to receive wall material, and a finishing jamb applied to the front face of said member.

1,347,173. METAL CLOCK-DIAL. GUNTHER E. H. MATHES, Waterbury, Conn., assignor to Waterbury Clock Co., Waterbury, Conn., a Corporation. Filed Apr. 9, 1920. Serial No. 372,395. 1 Claim. (Cl. 41—19.)



As a new article of manufacture, a metal clock-dial characterized by having its surface initially abraded in a series of concentric circles and its figures photographically printed upon such abraded surface prior to lacquering the same, whereby the figures are located in the plane of its finished surface.

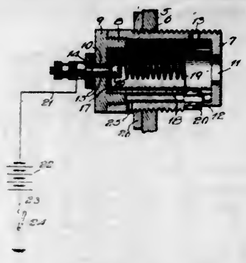
1,347,174. FREIGHT-CAR. HAROLD T. MURPHY, Springfield, Mass. Filed Apr. 10, 1920. Serial No. 372,935. 5 Claims. (Cl. 105—377.)



1. In a car, a body, a roof, an intervening member, and oppositely-disposed articulating means on different levels for said member and body and said member and roof.

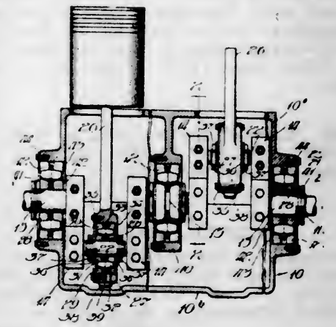
1,347,175. TELEPHONE INSTRUMENT. FRANK J. REICHMANN and JOHN PRESS, Chicago, Ill.; said Press assignor to said Reichmann. Filed June 21, 1918. Serial No. 241,135. 2 Claims. (Cl. 179—181.)

1. In a carbon button for telephony, a compound diaphragm dividing the mass of granular carbon into separate portions and comprising a dished, flexible disk-like member secured between resilient sheets.



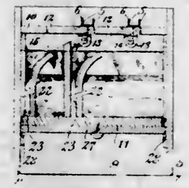
1,347,176. TELEGRAPH SIGNALING SYSTEM. HARRY O. RUGH, Chicago, Ill. Filed May 8, 1919. Serial No. 295,802. 9 Claims. (Cl. 178—47.)

1. In a telegraph system, a telegraph circuit, a plurality of stations therefor, a telegraph relay for a receiving one of the said stations, a tone producing device, an armature for the said relay, a reed-tongue, electrical contacts operated by the said reed-tongue, while the said reed-tongue is vibrating, said reed-tongue being mechanically held by the said armature in stressed condition when the relay is deënergized and being adapted to initiate a prolonged train of vibrations of the said reed-tongue when the said relay is energized, said armature immediately terminating the reed-tongue vibrations when the said relay is deënergized, and a controlling circuit for the said tone producing device comprising the said contacts and a source of current.



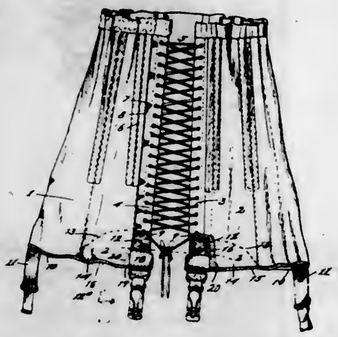
1,347,177. ELECTRIC APPARATUS FOR HEATING AND VAPORIZING HYDROCARBON FUELS. EDWARD SASLOW, Muskegon, Mich. Filed Feb. 16, 1920. Serial No. 358,994. 3 Claims. (Cl. 219—38.)

1. In a device of the class described, the combination with a conduit adapted for the passage of explosive mixture, of a container extended thereinto and having an opening in its inner portion and another opening externally of the conduit, a resistance coil supported within



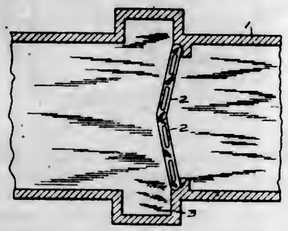
the container and having one of its ends insulated therefrom, an electric circuit connected to said end of said coil and a switch in said circuit.

1,347,178. CRANK-SHAFT. MARTIN J. SCHENK, Chicago, Ill. Filed Feb. 27, 1919. Serial No. 279,529. 5 Claims. (Cl. 74—38.)



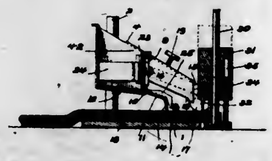
2. A crank shaft comprising a plurality of main shaft sections, crank arms having transverse channels therein adjacent the inner ends thereof adapted to receive adjacent ends of said shaft sections, other transverse channels provided adjacent the outer ends of said crank arms, and a crank pin detachably secured in said last named channels.

1,347,179. COIN-COUNTING APPARATUS. OSCAR E. SCHNITZSPAHN, Buffalo, N. Y. Filed Aug. 18, 1917. Serial No. 186,924. 3 Claims. (Cl. 133—8.)



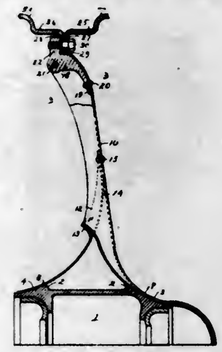
1. A coin counter comprising a vertically swinging rack adapted to support the coins deposited thereon so that their flat sides are arranged horizontally, and a guide-way into which the coins are discharged directly from said rack upon tilting the latter and which is of such width that the coins are held with their flat sides in a vertical position and which has an inclined bottom upon which the coins roll at their edges lengthwise of said guide-way.

1,347,180. CORSET. CHARLES H. SCHOPBACH, Aurora, Ill., assignor to International Corset Company, Aurora, Ill., a Corporation of Illinois. Filed Nov. 7, 1918. Serial No. 261,579. 3 Claims. (Cl. 2—73.)



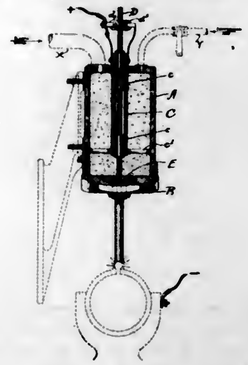
1. In a front lace corset in which a portion of the fabric extends below the fastening and lacing stays, a hose supporter secured at its upper end to the lower end of a front stay and extending parallel with the free margin of said fabric, and means secured to said free margin coöperating with said supporter and loosely embracing the latter and preventing lateral wrinkling or folding of the fabric, substantially as and for the purpose specified.

1,347,181. GLASS-FURNACE. JOHN R. SCOHY, Okmulgee, Okla. Filed Nov. 28, 1919. Serial No. 341,274. 2 Claims. (Cl. 49—56.)



1. A glass furnace having floaters and pockets formed in vicinity of and in advance to the outer ends of the floaters for collecting the scum held back by the floaters.

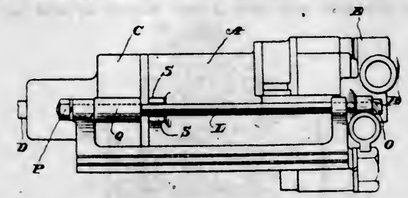
1,347,182. WRAPPER-PASTING DEVICE. JOSEPH J. SLEEPER, Moores, Pa., and WILLIAM MILLS, Pleasantville, N. J.; said Mills assignor to said Sleeper. Filed Apr. 11, 1917. Serial No. 161,133. 11 Claims. (Cl. 93—68.)



1. A device of the character described, comprising a paste holder having a paste outlet, an inclined platform communicating with the outlet and over which the paste is fed from the paste holder and side guide therefor, and a roller located adjacent to but spaced from the said inclined platform.

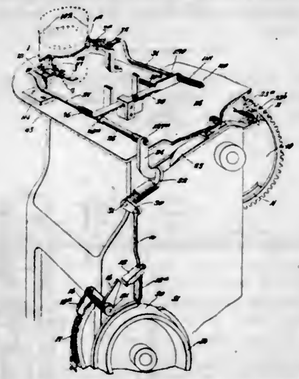
1,347,183. METAL WHEEL. REUBEN STANLEY SMITH, Milwaukee, Wis. Filed Oct. 9, 1916. Serial No. 124,498. 22 Claims. (Cl. 152—50.)

1. A wheel including a web spoke member, comprising a piece of sheet metal shaped to form a conical hub embracing annulus having radial arms, each partially folded along its longitudinal center line to form a spoke substantially U-shaped in cross section, the outer portions of said annulus being corrugated to form outwardly extending and progressively deepening channels, with the portions between said channels constituting continuations of the spokes in the direction of the hub.



1,347,184. ELECTRIC-ARC-WELDING MACHINE. REUBEN STANLEY SMITH, Milwaukee, Wis. Filed May 17, 1920. Serial No. 381,877. 12 Claims. (Cl. 219—8.)

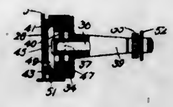
1. In an arc welding machine employing a fusible metallic electrode, connections for supplying a fusing current to the electrode, and means for applying a plastic coating or covering to the electrode as the latter is fed to the work to be welded and consumed in the welding operation.



1,347,185. MOUNTING FOR ROCK-DRILLS. WILLIAM A. SMITH, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 22, 1920. Serial No. 367,939. 1 Claim. (Cl. 255—51.)

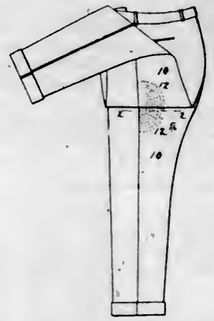
In a rock drill, a cylinder casing having front and back heads, holding lugs at each side of the front and back heads, guide lugs at each side of the cylinder casing in line with the said holding lugs, a cradle for the rock drill provided with a body portion having guides and also having supporting arms adapted to lie opposite the said holding lugs on the front and back heads, and continuous side bolts adapted to extend through the said supporting arms and holding and guide lugs at each side of the rock drill

and means for tightening the bolts to clamp the cylinder casing and front and back heads to each other and to the said cradle.



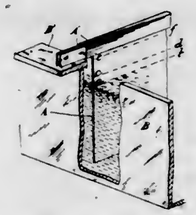
1,347,186. CIRCULAR-KNITTING MACHINE. WILLIAM E. SMITH, Milltown, N. J., assignor to The Interwoven Mills, Inc., New Brunswick, N. J., a Corporation of New Jersey. Filed May 17, 1919. Serial No. 297,763. 9 Claims. (Cl. 66—21.)

1. In a circular knitting machine, the combination with a circular series of needles, stitch forming cam mechanism for actuating all of said needles, to form a circular course of stitches, and a thread guide for feeding a knitting thread circularly to all of said needles during circular work, certain consecutive needles for knitting a segmental portion of the tubular fabric being provided with longer nibs than those of the other needles of the series, of an auxiliary raising cam for engaging the long nib needles only, for raising them out of operative relation with the stitch forming cam mechanism during circular work, an auxiliary lowering cam for engaging said long nibs and lowering them into operative relation with the stitch forming cam mechanism, said auxiliary raising cam being movable in directions toward and from the circular series of needles, into and out of operative relation with the long nib needles, and means for moving said auxiliary raising cam into and out of operative position with respect to the long nib needles, whereby partial courses of stitches may be knit between adjacent circular courses of the tubular fabric with the same knitting thread.



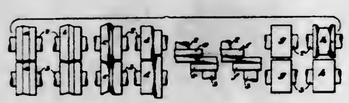
1,347,187. TYPEWRITING-MACHINE. JACOB SOKOLOV, New York, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 9, 1917. Serial No. 147,533. 9 Claims. (Cl. 74—45.)

1. In a typewriting machine, the combination with a traveling carriage, of a centrifugal governor for said carriage, said governor comprising a shaft, means for connecting said shaft to said carriage, and through which said shaft may be rotated in accordance with the movement of said carriage, centrifugal arms carried by said shaft, friction contact elements carried by said arms, and opposed re-action surfaces carried by said governor to receive the thrust of said contact elements when urged



outwardly by said arms, one of said re-action surfaces being beveled or conical so that outward movement of said arms will have a tendency to wedge the contact elements between the opposed reaction surfaces.

1,347,188. BIFURCATED GARMENT. SAMUEL F. STEIN, Williamsport, Pa. Filed Jan. 17, 1920. Serial No. 352,062. 4 Claims. (Cl. 2—126.)

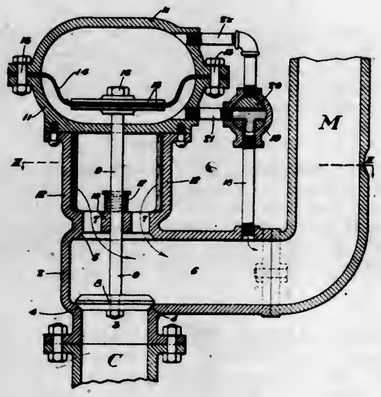


2. A bifurcated garment having at the crotch, and where the external surface is subjected to frictional wear and over the area subjected to such wear, small portions of such surface isolated by concentric lines of stitching in close proximity to one another.

1,347,189. RECOVERY OF ZINC BY ELECTROLYSIS. ROYALE HILLMAN STEVENS, Risdon Road, Hobart, Tasmania, Australia, assignor to Electrolytic Zinc Company of Australasia Proprietary Limited, Melbourne, Victoria, Australia. Filed Nov. 11, 1919. Serial No. 337,320. 4 Claims. (Cl. 204—18.)

3. In the electrolytic process for the recovery of zinc providing a protective coating for the cathode above the normal solution level by first carrying out a preliminary electrolysis with the cathode immersed to substantially a line immediately below the supporting bars, the cathodes having wooden strips affixed at or about the normal solution level which prevent the deposition of zinc under them, and then removing the said strips and proceeding with the electrolysis in the ordinary way in cells with the solution at normal level whereby the subsequently deposited zinc strips along the line of weakness at or about the solution level; substantially as described.

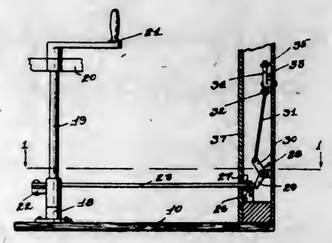
1,347,190. SHEET-METAL CONSTRUCTION. HARRY A. THOMAS, Pittsburgh, Pa., assignor to Margerie Thomas, Pittsburgh, Pa. Filed Nov. 3, 1919. Serial No. 335,290. 2 Claims. (Cl. 153—28.)



1. In the formation of a sheet metal joint member, the gradual deflection of a flat blank by a series of simultaneously operating continuous rolling treatments of a movable blank to provide first a V-shaped groove, then a right angled shoulder, then an acutely reversed Z formation with rounded corners, and then flattening the offset double rib thus formed to parallelism with the main blank with intervening clearance.

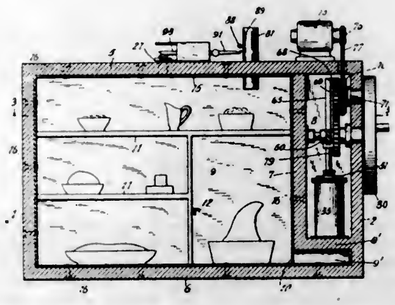
1,347,191. MINERAL PAINT-PIGMENT. NATHANIEL A. THOMPSON, Kansas City, Kans., assignor to Rock Hill Paint and Cloth Company, a Corporation of Delaware. Filed June 24, 1919. Serial No. 306,395. 3 Claims. (Cl. 134—58.)

1. A new pigment comprising ferric oxid, calcium oxid 6%, magnesium oxid 36.5%, silicon oxid 10.5%, sulfur .5%, and aluminum oxid .5%.



1,347,192. FUEL-CONTROL MECHANISM FOR INTERNAL-COMBUSTION ENGINES. HARRY L. TYGARD, Pittsburgh, and GEORGE M. HAMILTON, Oakmont, Pa. Filed May 8, 1920. Serial No. 379,829. 5 Claims. (Cl. 123—98.)

1. In an internal combustion engine, means for cutting off the fuel supply and for simultaneously opening the combustion chamber to the atmosphere consisting of a casing having an apertured wall at opposite sides of a middle circulation chamber, a stem extending therethrough, provided with a valve adapted to close one wall or the other, and means subject to the suction of the engine for actuating said valve.

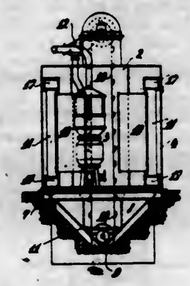


1,347,193. DOOR OPENING AND CLOSING DEVICE. JOHN WADE, St. Paul, and SIDNEY J. MARKIN and HARTWELL A. DU PREY, Minneapolis, Minn.; said Markin assignor to said Wade and said Du Prey. Filed Oct. 13, 1919. Serial No. 330,328. 3 Claims. (Cl. 268—9.)

1. In a device of the class described, the combination with a hinged door having a latch thereon, of a crank, a thrust-lever pivotally attached at one end thereto and having a pivotal and limited slidable connection at its other end with said door, a cam surface on said latter

end of said thrust-lever and mechanism connected with said latch and actuated by said cam surface for withdrawing the latch and withholding the same during the swing of the door.

1,347,194. VACUUM-CABINET. ELWOOD WASHINGTON, Hammond, Ind. Filed Apr. 29, 1919. Serial No. 293,506. 6 Claims. (Cl. 99—2.)



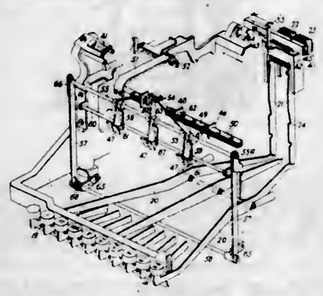
1. A device of the class described comprising a cabinet providing an air tight receptacle and partitioned off at one end to form a mechanism chamber, said mechanism chamber being spaced from the bottom of the cabinet to provide a space communicating with the said air tight receptacle, and suction pumps in said mechanism chamber and communicating through the bottom of the latter with the said space.

6. A device of the class described comprising an air-tight receptacle, having an opening in its wall, a suction pump in communication with said receptacle, a removable stopper closing said opening, an electric motor for driving said pump, a device automatically movable according to the degree of vacuum in the receptacle, a bridging piece carried by the said stopper, means providing a closed power circuit through the motor and bridging piece, and a member adapted to be engaged by the said device to open the said circuit, said member comprising a lever pivoted between its ends.

1,347,195. WORKSHOP VENTILATION. CHARLES WELLER, Zurich, Switzerland. Filed Jan. 5, 1918. Serial No. 210,519. 3 Claims. (Cl. 98—27.)

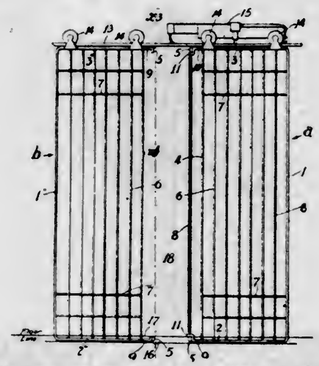
3. In a device of the character described, the combination with upper and lower oppositely disposed casings both communicating with atmosphere, an open ended

cylinder held in said casings and rotatable about its own axis therein, said cylinder having a slot in its wall ex-



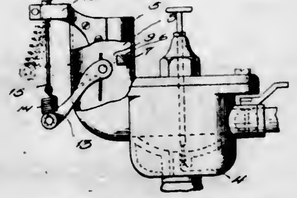
tending substantially throughout its length, and wings at opposite sides of said slot for giving direction to air issuing therethrough.

1,347,196. WIRE-CLAMP-FASTENING MEANS. CARL H. WERNER, Waterloo, Iowa. Filed May 22, 1919. Serial No. 299,066. 1 Claim. (Cl. 254—162.)



In a device of the character described, a flexible element formed into a U-shaped loop, whose members traverse alined orifices in spaced inter-stayed mold-boards, and a strain-device positioned along one of the mold-boards having a longitudinally-channeled base-plate to fit a vertical cleat on one of said mold-boards and having spaced bearings, a rotatable shaft in said bearings, the shaft having engaging-means to receive and hold the extremities of said members when the latter are wound about the shaft, placing the members simultaneously under equal longitudinal strain, and means for releasably holding the shaft in an adjusted position.

1,347,197. TYPEWRITING-MACHINE. LESTER A. WERNERY, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 5, 1917. Serial No. 140,818. 25 Claims. (Cl. 197—177.)



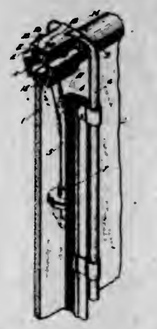
1. In a typewriting machine, the combination with a traveling carriage, of a tabulating key adapted to release the carriage and arrest the carriage, a second tabulating key adapted to make said first tabulating key ineffective to arrest the carriage, and carriage-controlled means for again making said first key effective to control the carriage.

1,347,198. SAFETY-GATE. GEORGE F. WINTER, Los Angeles, Calif. Filed Oct. 28, 1919. Serial No. 334,062. 12 Claims. (Cl. 189—46.)

1. The combination with a passway of edgewise moving closure means for said way and means for stopping said closure means at such point as to accommodate a limb of a person in case such limb is in the way at the shutting of the closure means.

1,347,199. CHOKE-VALVE. DAVID L. WINTERS, Edgewater, Md. Filed Oct. 15, 1919. Serial No. 330,798. 3 Claims. (Cl. 251—149.)

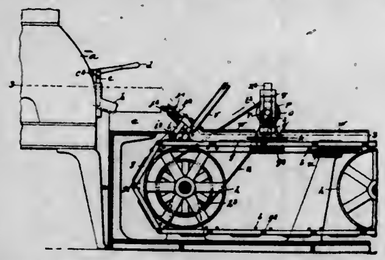
1. In combination, a carbureter provided with the usual throttle valve, fuel inlet, and air inlet, a valve in said air inlet, resilient means forming part of means within reach of the driver to close said valve, said resilient means being so connected with said valve as to permit the automatic opening thereof by the suction of the engine and to a degree proporioned to the load thereon.



1,347,200. TREATMENT OF ZINC SOLUTIONS PREPARATORY TO THE RECOVERY OF ZINC BY ELECTRODEPOSITION. DAVID AVERY and ROWLAND T. D. WILLIAMS, Risdon, Hobart, Tasmania, Australia, assignors to Electrolytic Zinc Company of Australasia Proprietary Limited, Melbourne, Victoria, Australia. Filed July 25, 1918. Serial No. 246,642. 6 Claims. (Cl. 75—18.)

1. In the treatment of zinc solutions containing cobalt preparatory to recovery of zinc by electrodeposition the method of removing cobalt which comprises precipitating the cobalt by means of zinc dust in the presence of arsenic.

1,347,201. BRACKET FOR WINDSHIELD-CLEANERS. ALBERT B. BEITMAN, Cleveland, Ohio, assignor to The Outlook Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 29, 1917. Serial No. 193,907. 5 Claims. (Cl. 15—59.)

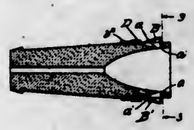


1. The combination of opposed plates for application to opposite sides of a windshield frame, each plate having angularly disposed portions and a portion thereabove that is substantially parallel to the corresponding portion of the other plate, a screw passing freely through one

and threaded into the other of such parallel portions, one of said plates having an extension disposed substantially horizontally above the frame and formed to constitute

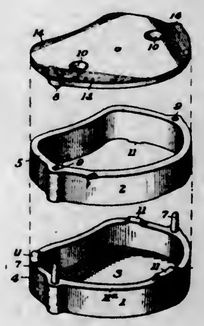
an open sided bearing wherein the shaft of a cleaning device is adapted to be journaled, the other plate having a portion serving to complete the bearing on said open side.

1,347,202. GLASS-MOLDING MACHINE. HARRY O. BISBING, Detroit, Mich. Filed Sept. 26, 1919. Serial No. 326,513. 6 Claims. (Cl. 49—3.)



6. The combination of a molten glass reservoir, a discharge passageway for such reservoir, a chain-like series of glass receptacles adapted to be brought underneath such discharge passageway, an inclosure for the run way of such chainlike series of glass receptacles, and means for directing a hot blast through the roof of such inclosure against the discharging stream of molten glass.

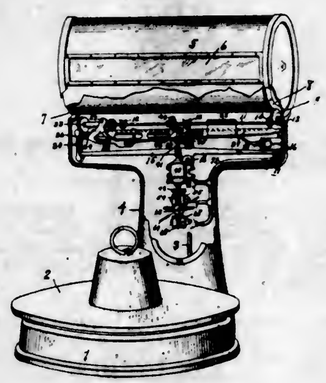
1,347,203. COMBINATION ROD-SOCKET AND OVERSHOT FISHING-TOOL. WILLARD L. BOROUGH, Fullerton, Calif. Filed Oct. 30, 1918. Serial No. 260,396. 10 Claims. (Cl. 294—96.)



1. A fishing tool comprising a head having means formed thereon by which it may be secured to the lower end of a string of pump rods; a slip body threaded on the lower end of said head; slips placed in a conical opening formed in the bottom of said slip body; a compression spring acting between said slips and the bottom of said head; an overshot body threaded to the bottom of said slip body; a shoe threaded to the bottom of said overshot body; a series of overshot members pivotally mounted in said shoe and projecting upwardly into said overshot body; a wedge collar sliding freely in said overshot body above said overshot members; a compression spring acting between the upper end of said wedge collars and a projection formed inside said overshot body; and a wooden retaining pin passing through holes formed in said overshot body in such a position that said wooden pin will hold said wedge collar entirely out of contact with said overshot members.

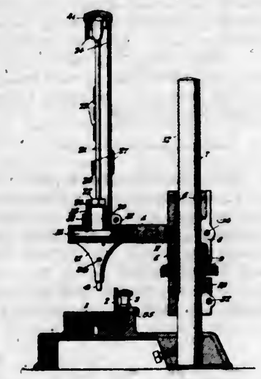
1,347,204. CIGAR-HOLDER. WILLIAM H. BRIDGES, Cincinnati, Ohio, assignor of one-fourth to Morris W. Jennings and one-fourth to Stanley D. Hart, Cincinnati, Ohio. Filed Oct. 23, 1918. Serial No. 259,304. 2 Claims. (Cl. 131—10.)

1. A cigar holder having an internal recess near the outer edge of the socket, a finger normally seated in the recess, a spring arm upon the exterior of the holder projecting inward and engaging the finger, and a means for pressing the spring arm inward to carry the finger out of its recess.



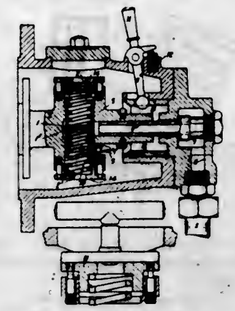
1,347,205. DENTAL FLASK. FREDERIC H. BROWN, Lebanon, N. H. Filed Sept. 26, 1919. Serial No. 326,463. 5 Claims. (Cl. 18—33.)

1. A dental flask comprising freely separable upper and lower portions having three projecting points of contact, whereby they may always be evenly seated against each other when clamped, substantially as described.



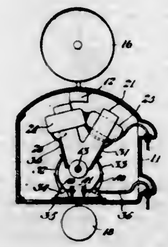
1,347,206. SCALE. FREMONT H. BUCKINGHAM, Detroit, Mich., assignor to The Standard Computing Scale Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 31, 1917. Serial No. 158,819. 10 Claims. (Cl. 265—56.)

1. In a load resisting mechanism for scales, the combination of a beam and a fulcrum therefor, a poise slidable on the beam, a screw mounted on the beam for positioning the poise on the beam, an operating device for the screw, and connections including a flexible coupling



between said device and the screw permitting the screw and beam to swing substantially without friction.

1,347,207. GAGE. CHARLES E. COATS, New York, N. Y., assignor to Coats Machine Tool Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 6, 1919. Serial No. 328,726. 8 Claims. (Cl. 33—147.)

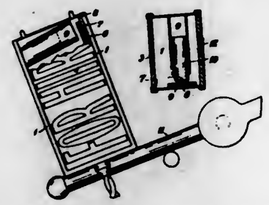


1. A device of the class set forth comprising a base, an upright post rigidly held to the base, a collar slidable on said post, meaps for holding the collar in its adjusted position, a laterally extending arm having an aperture through which the post extends, an adjusting nut slidable on the post and having right and left hand screw thread connections with the arm and collar, an indicating-fluid container sopported by said arm having a flexible lower wall, a transparent indicating tube communicating at its lower end with said container, and a plunger reciprocably supported on said arm below said container and adapted to flex the lower wall of the container when moved upwardly relatively to the arm.

1,347,208. GOVERNING AND EMERGENCY MECHANISM. DAVID COCKBURN and DONALD MACNICOLL, Cardonald, near Glasgow, Scotland. Filed Jan. 19, 1920. Serial No. 352,535. 4 Claims. (Cl. 137—140.)

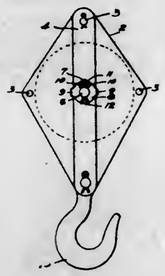
1. In a governing device, the combination with a rotor, two tubular valves rotatable with said rotor, each of said valves presenting a seat to the other, both valves adapted to be lifted under the action of centrifugal force, and a fluid pressure conduit controlled by said valves.

1,347,209. DOUBLE-COIL OSCILLATING MOTOR. LOREN O. CRENSHAW, Los Angeles, Calif., assignor to Magnetic Signal Company, a Corporation of California. Filed May 7, 1919. Serial No. 295,795. 1 Claim. (Cl. 172—126.)



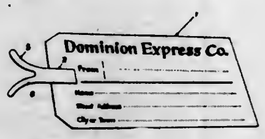
A double coil oscillating motor comprising a shaft; a pendulum dependent from said shaft; a magnet casting secured to said shaft and having two radial pairs of limbs both limbs of each radial pair being located in a radial plane to which said shaft is perpendicular, these planes being parallel to each other, the limbs in each radial plane being located in angular relationship to each other but so disposed as to form, with one of the limbs in the other radial plane, an axial pair both of the limbs of each axial pair being in a single axial plane which also contains the axis of said shaft, said axial planes forming a dihedral angle; an armature so located that it can come into magnetic relationship with each of said axial pairs as said shaft is rotated but being somewhat nearer one of said axial pairs than the other when said pendulum is in its lowest position; two coils each surrounding one of said limbs but being located in different radial and axial planes; means for energizing both of said coils; and means for deënergizing each coil as the limb on which it is placed comes into its position of maximum magnetic pull on said armature.

1,347,210. SIGNAL-FLAG FOR TAXICABS. ARTHUR CAICK, Bristol, England, assignor to Hugh Denham Sweetland and Albert James Owen, Bristol, England. Filed June 2, 1920. Serial No. 285,995. 2 Claims. (Cl. 40—138.)



1. In a device of the kind described, the combination with a hollow signal flag; of an electric lamp mounted

within said flag, an open electric circuit whereto said lamp is connected, said circuit including normally spaced contacts, gravity means, within said flag engageable in one



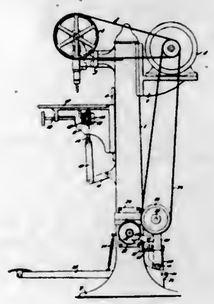
position of the flag with one of said contacts to close the same on the remaining contact, and means to pivotally support said flag.

1,347,211. ATTACHMENT FOR ROPE-BLOCKS. OLIVER CROSBY, St. Paul, Minn., assignor to American Hoist & Derrick Co., St. Paul, Minn., a Partnership. Filed Apr. 23, 1918. Serial No. 230,216. 3 Claims. (Cl. 254—192.)

1. The combination, with a rope block and a sheave axle mounted therein and having a socket and a cotter pin fitting said socket, of a washer interposed between said pin and block and having ribs formed thereon to engage said block and lock said washer against revolution, said washer having lugs spaced apart to receive one end of said cotter pin and also having a wedge-shaped lug formed thereon fitting between the diverging ends of said pin.

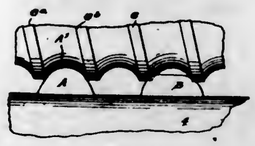
1,347,212. SHIPPING-TAG. DUNCAN ALFRED CUKE and FREDERICK JAMES TWILLEY, Montreal, Quebec, Canada. Filed Nov. 7, 1919. Serial No. 336,387. 1 Claim. (Cl. 40—26.)

A shipping tag comprising a card and a Y-shaped piece of pliable sheet metal clenched to one end of the card and having the crotch of the Y extending therebeyond forming projecting arms in a parallel plane to the card adapted to be curled in opposite directions around the cord of the package.



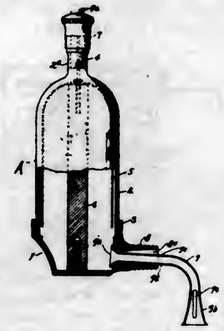
1,347,213. CLAMP FOR VULCANIZING-MACHINES. OSCAR T. DE LONG, Atlanta, Ga. Filed Feb. 16, 1920. Serial No. 358,976. 2 Claims. (Cl. 18—43.)

1. In a clamp for vulcanizing machines, a clamping member having means of attachment to a vulcanizing machine, the said clamp having an upwardly tapered seat and a bushing of like configuration fitting in the seat with



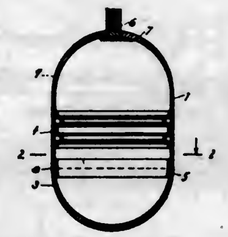
means for preventing rotation of the bushing with relation to the clamp.

1,347,214. DRILLING-MACHINE. ALEXANDER DOM, Cincinnati, Ohio, assignor to The Samuel C. Tatum Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 13, 1917. Serial No. 191,105. 4 Claims. (Cl. 74—46.)



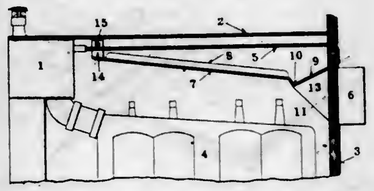
1. A transmission mechanism comprising a driving member, a driven member, a sliding clutch for connecting said driving and driven members, a clutch operating lever, a treadle lever pivotally supporting said clutch operating lever, and a latch member carried by said treadle lever for unitarily connecting said lever, whereby the clutch may be operated by said treadle lever.

1,347,215. SEPARATING-MACHINE. PHILIP EBY, Rochester, N. Y., assignor to Art In Buttons, Inc., Rochester, N. Y., a Corporation of New York. Substitute for application Serial No. 312,369, filed July 21, 1919; renewal of application Serial No. 21,540, filed Feb. 4, 1918; renewal of application Serial No. 114,705, filed Aug. 14, 1916. This application filed June 9, 1920. Serial No. 387,544. 11 Claims. (Cl. 83—92.)



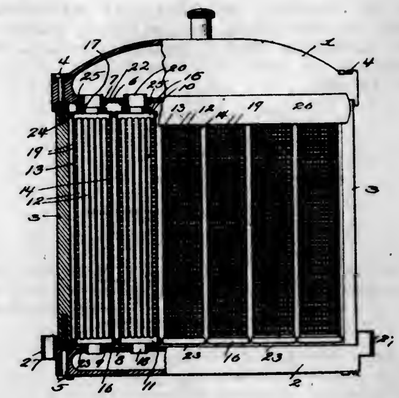
1. A separating machine comprising a pair of rotary members arranged in spaced relation to each other in substantially the same horizontal plane, and provided with alternately arranged cylindrical and spirally grooved portions, the spiral grooves increasing in size in the successive grooved portions from one end of the machine to the other, and disposed opposite cylindrical portions on the other member.

1,347,216. AIR-VALVE FOR RADIATORS. FRANK E. ETZEL, Montclair, N. J. Filed Apr. 15, 1919. Serial No. 290,172. 6 Claims. (Cl. 137—122.)



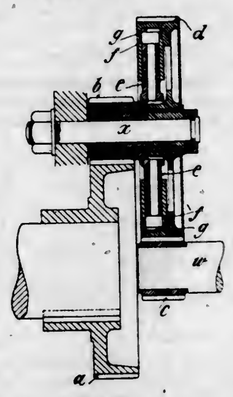
1. An air valve for radiators comprising a base or cup, and a mainly impervious drainage tube communicating therewith, said drainage tube having an opening in its wall to admit air and steam and having a widened entrance portion within the base or cup.

1,347,217. FLOAT. WILLIAM A. ENGELHARD, FRANK ENGELHARD, and FREDERICK H. ENGELHARD, Springfield, Mass. Filed Oct. 29, 1919. Serial No. 334,241. 11 Claims. (Cl. 137—104.)



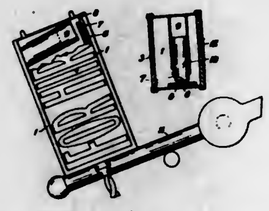
11. A float comprising a shell having hemispherical and cylindrical portions, such hemispherical portion being thicker than such cylindrical portion, a reinforcing ring within said cylindrical portion, a hemispherical shell joined to said cylindrical portion, a reinforcing and joint-closing ring within said shells, and a coating of metal on the exterior of said shells and over the joint therebetween, such coating being thickest at the bottom of the float.

1,347,218. RAIN-GUARD FOR MOTOR-VEHICLES. MARTIN J. FASSEL, St. Louis, Mo. Filed Aug. 28, 1919. Serial No. 320,332. 3 Claims. (Cl. 180—90.)



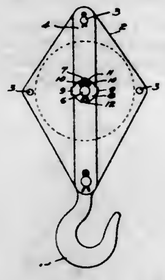
1. The combination with a radiator, engine, hood, and dash, of a motor vehicle, of a rain guard passing through the dash and adapted to intercept the water on the inside of the dash above the coil box and convey the same through the dash, said guard extending over the engine to a point adjacent to the radiator, said guard sloping at both ends to a discharge point intermediate of its ends.

1,347,219. SECTIONAL RADIATOR. WALTER I. GIBSON, New Orleans, La., assignor of one-third to Edward R. Greenlaw and one-third to Frederick M. Mills, New Orleans, La. Filed June 13, 1917. Serial No. 174,534. 2 Claims. (Cl. 257—129.)



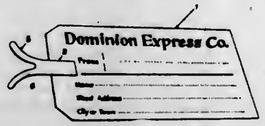
2. In a radiator, the combination of upper and lower reservoirs, the lower wall of the upper reservoir and the upper wall of the lower reservoir having corresponding openings therein, a plurality of cooling sections adapted to occupy the space between the reservoirs, each section having exteriorly tapered nipples projecting from the center of its upper and lower ends, the nipples on the lower end of the section frictionally and removably fitting in the respective opening in the lower reservoir, and a cylindrical nipple for each section adjustably threaded in the corresponding opening in the upper reservoir and telescopically fitted over and receiving the exteriorly tapered nipple on the upper end of the section adjacent thereto, said cylindrical nipple being operative to produce and maintain compression between the upper and lower ends of the section and the respective reservoirs.

1,347,220. GEARING FOR CONNECTING COAXIAL SHAFTS. FREDERICK MICHAEL GREEN and SAM DALZIEL HERON, Parkside, Coventry, England, assignors to Siddeley-Deasy Motor Car Company Limited, Parkside, Coventry, England. Filed July 22, 1918. Serial No. 246,209. 5 Claims. (Cl. 74—7.)



1. A gearing for coupling co-axially arranged shafts comprising a spur wheel on each of said shafts, a plurality of stationary intermediate axles arranged in parallel relation to the co-axially arranged shafts, two spur wheels on each of said intermediate axles, said wheels gearing re-

within said flag, an open electric circuit whereto said lamp is connected, said circuit including normally spaced contacts, gravity means, within said flag engageable in one



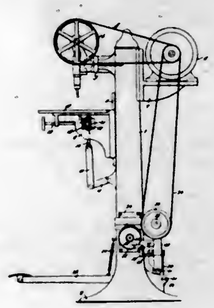
position of the flag with one of said contacts to close the same on the remaining contact, and means to pivotally support said flag.

1,347,211. ATTACHMENT FOR ROPE-BLOCKS. OLIVER CROSBY, St. Paul, Minn., assignor to American Hoist & Derrick Co., St. Paul, Minn., a Partnership. Filed Apr. 23, 1918. Serial No. 230,216. 3 Claims. (Cl. 254—192.)

1. The combination, with a rope block and a sheave axle mounted therein and having a socket and a cotter pin fitting said socket, of a washer interposed between said pin and block and having ribs formed thereon to engage said block and lock said washer against revolution, said washer having lugs spaced apart to receive one end of said cotter pin and also having a wedge-shaped lug formed thereon fitting between the diverging ends of said pin.

1,347,212. SHIPPING-TAG. DUNCAN ALFRED CUKE and FREDERICK JAMES TWILLEY, Montreal, Quebec, Canada. Filed Nov. 7, 1919. Serial No. 336,387. 1 Claim. (Cl. 40—26.)

A shipping tag comprising a card and a Y-shaped piece of pliable sheet metal clenched to one end of the card and having the crotch of the Y extending therebeyond forming projecting arms in a parallel plane to the card adapted to be curled in opposite directions around the cord of the package.

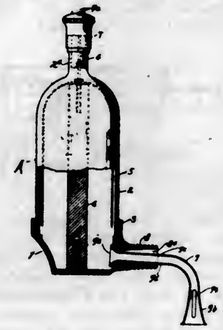


1,347,213. CLAMP FOR VULCANIZING-MACHINES. OSCAR T. DE LONG, Atlanta, Ga. Filed Feb. 16, 1920. Serial No. 358,976. 2 Claims. (Cl. 18—43.)

1. In a clamp for vulcanizing machines, a clamping member having means of attachment to a vulcanizing machine, the said clamp having an upwardly tapered seat and a bushing of like configuration fitting in the seat with

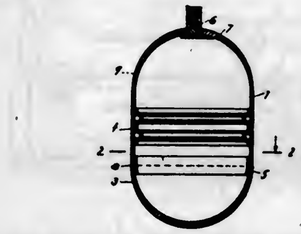
means for preventing rotation of the bushing with relation to the clamp.

1,347,214. DRILLING-MACHINE. ALEXANDER DOM, Cincinnati, Ohio, assignor to The Samuel C. Tatum Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 13, 1917. Serial No. 191,105. 4 Claims. (Cl. 74—46.)



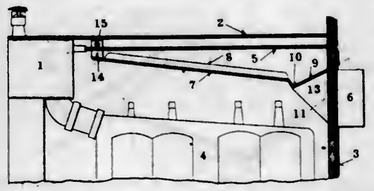
1. A transmission mechanism comprising a driving member, a driven member, a sliding clutch for connecting said driving and driven members, a clutch operating lever, a treadle lever pivotally supporting said clutch operating lever, and a latch member carried by said treadle lever for unitarily connecting said lever, whereby the clutch may be operated by said treadle lever.

1,347,215. SEPARATING-MACHINE. PHILIP EBY, Rochester, N. Y., assignor to Art In Buttons, Inc., Rochester, N. Y., a Corporation of New York. Substitute for application Serial No. 312,369, filed July 21, 1919; renewal of application Serial No. 21,540, filed Feb. 4, 1918; renewal of application Serial No. 114,705, filed Aug. 14, 1916. This application filed June 9, 1920. Serial No. 387,544. 11 Claims. (Cl. 83—92.)



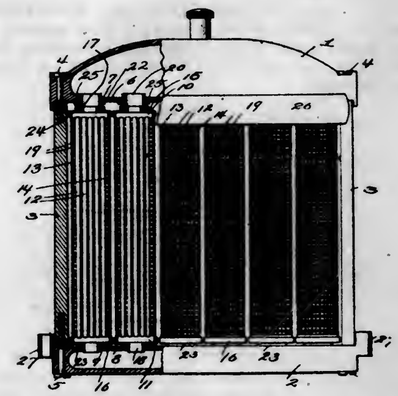
1. A separating machine comprising a pair of rotary members arranged in spaced relation to each other in substantially the same horizontal plane, and provided with alternately arranged cylindrical and spirally grooved portions, the spiral grooves increasing in size in the successive grooved portions from one end of the machine to the other, and disposed opposite cylindrical portions on the other member.

1,347,216. AIR-VALVE FOR RADIATORS. FRANK E. ETZEL, Montclair, N. J. Filed Apr. 15, 1919. Serial No. 290,172. 6 Claims. (Cl. 137—122.)



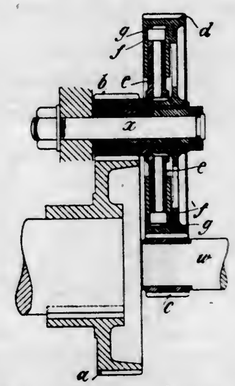
1. An air valve for radiators comprising a base or cup, and a mainly impervious drainage tube communicating therewith, said drainage tube having an opening in its wall to admit air and steam and having a widened entrance portion within the base or cup.

1,347,217. FLOAT. WILLIAM A. ENGELHARD, FRANK ENGELHARD, and FREDERICK H. ENGELHARD, Springfield, Mass. Filed Oct. 29, 1919. Serial No. 334,241. 11 Claims. (Cl. 137—104.)



11. A float comprising a shell having hemispherical and cylindrical portions, such hemispherical portion being thicker than such cylindrical portion, a reinforcing ring within said cylindrical portion, a hemispherical shell joined to said cylindrical portion, a reinforcing and joint-closing ring within said shells, and a coating of metal on the exterior of said shells and over the joint therebetween, such coating being thickest at the bottom of the float.

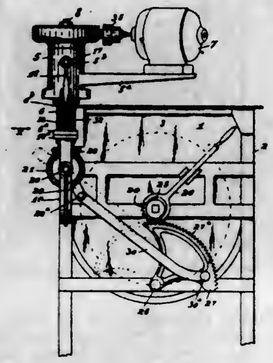
1,347,218. RAIN-GUARD FOR MOTOR-VEHICLES. MARTIN J. FASSEL, St. Louis, Mo. Filed Aug. 28, 1919. Serial No. 320,332. 3 Claims. (Cl. 180—90.)



1. The combination with a radiator, engine, hood, and dash, of a motor vehicle, of a rain guard passing through the dash and adapted to intercept the water on the inside of the dash above the coil box and convey the same through the dash, said guard extending over the engine to a point adjacent to the radiator, said guard sloping at both ends to a discharge point intermediate of its ends.

1,347,219. SECTIONAL RADIATOR. WALTER I. GIBSON, New Orleans, La., assignor of one-third to Edward R. Greenlaw and one-third to Frederick M. Mills, New Orleans, La. Filed June 13, 1917. Serial No. 174,534. 2 Claims. (Cl. 257—129.)

2. In a radiator, the combination of upper and lower reservoirs, the lower wall of the upper reservoir and the upper wall of the lower reservoir having corresponding openings therein, a plurality of cooling sections adapted to occupy the space between the reservoirs, each section having exteriorly tapered nipples projecting from the center of its upper and lower ends, the nipples on the lower end of the section frictionally and removably fitting in the respective opening in the lower reservoir, and a cylindrical nipple for each section adjustably threaded in the corresponding opening in the upper reservoir and telescopically fitted over and receiving the exteriorly tapered nipple on the upper end of the section adjacent thereto, said cylindrical nipple being operative to produce and maintain compression between the upper and lower ends of the section and the respective reservoirs.

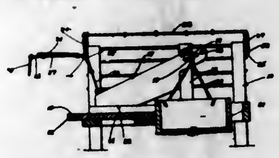


1,347,220. GEARING FOR CONNECTING COAXIAL SHAFTS. FREDERICK MICHAEL GREEN and SAM DALZIEL HEBON, Parkside, Coventry, England, assignors to Siddeley-Deasy Motor Car Company Limited, Parkside, Coventry, England. Filed July 22, 1918. Serial No. 246,209. 5 Claims. (Cl. 74—7.)

1. A gearing for coupling co-axially arranged shafts comprising a spur wheel on each of said shafts, a plurality of stationary intermediate axles arranged in parallel relation to the co-axially arranged shafts, two spur wheels on each of said intermediate axles, said wheels gearing re-

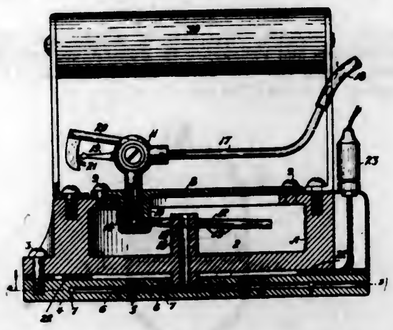
spectively with the spur wheels on the co-axially arranged shafts, and automatic clutches which operate by centrifugal action to effect a couple between the two spur wheels on each of the intermediate axles.

1,347,221. GEARING FOR LAUNDRY MACHINERY. JOHN H. HENDRICKSON, Cleveland, Ohio, assignor to The Hendrickson Machine Company, Cleveland, Ohio. Filed Aug. 25, 1919. Serial No. 319,615. 4 Claims. (Cl. 74—50.)



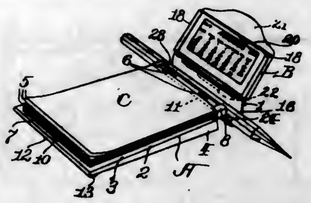
3. In laundry machinery, the combination with a tub and a rotatable cylinder mounted on trunnions in said tub; of a spur pinion mounted on one of the cylinder trunnions; a clutch for connecting said pinion with the trunnion; a segmental gear rack fulcrumed on the tub below the cylinder axis, and in mesh with said pinion; a rotatable housing mounted above the tub; a bracket provided therefor; a motor carried on said housing; a vertical shaft journaled in said housing and in the bracket; gear mechanism connecting said shaft and the motor; a bevel gear on said shaft, a companion gear coacting with said bevel gear; a horizontal shaft journaled in the bracket carrying the companion gear; an eccentric connecting rod connected with an arm provided on the companion gear, and with the segmental gear rack, for driving the cylinder; an operating device attached to the rotatable housing, said operating device containing a pair of rotary elements; gear mechanism connecting one of the rotary elements with the vertical shaft, for driving said element; and clutch mechanism co-acting with the last named gear mechanism, for reversing the operation of the rotary elements.

1,347,222. INDEX AND MEMORANDUM PAD HOLDER. LOUIS A. HUFSCHMIDT, San Francisco, Calif. Filed June 12, 1919. Serial No. 303,653. 3 Claims. (Cl. 40—10.)



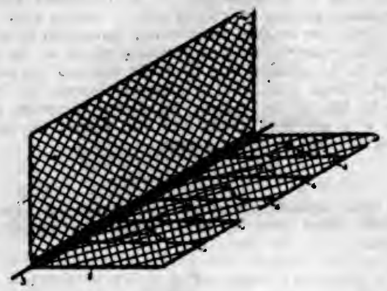
1. In a device of the character described a holder comprising a central rectangular partition wall, flanges formed along three sides of each of the faces of said wall, spring members disposed beneath certain of the flanges for holding index cards in position, a fixed back plate for said holder and means upon the back plate for detachably engaging the holder to permit it to be reversibly held upon the plate.

1,347,223. HEN'S NEST. ALBERT S. JOHNSON, Irwin, Mo., assignor of four-fifths to John Peterson, J. M. Conner, W. S. Grant, Floyd L. Fluke, H. A. Gorsuch, J. T. Alsup, W. M. Herd, and F. R. Burritt, county of Delta, Colorado. Filed July 15, 1919. Serial No. 310,969. 1 Claim. (Cl. 119—49.)



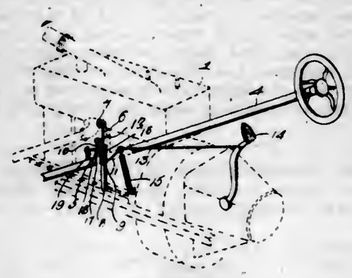
A nest including a frame, a swinging door in one end thereof, a rod forming the pivotal support for the door, a top wall having corner legs with eyes, certain of said eyes being engaged with said rod for pivotal support of the top wall, and a removable rod carried by the other end of the frame and engageable through the remaining eyes for holding the top closed.

1,347,224. ELECTRIC STEAM-IRON. SHINTARO KAKO, Los Angeles, Calif. Filed Nov. 5, 1918. Serial No. 261,184. 4 Claims. (Cl. 68—26.)



1. A flat-iron smoothing and sprinkling device including superposed smoothing and water-containing and distributing members with an interposed trap, a source of supply, and a valve connected with the distributing members, a water supply indicator, including an arm connected with the valve, and a graduated arc carried thereby and a stationary pointer coacting with the arc.

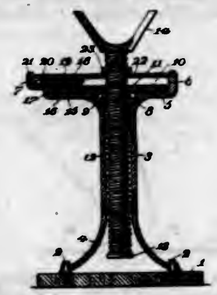
1,347,225. DESK-PAD AND CALENDAR-HOLDER. FRANK J. KRISTOFEK, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed May 17, 1917. Serial No. 169,853. 5 Claims. (Cl. 281—4.)



2. A desk pad and calendar holder, comprising a scratch pad holding means formed from a single piece of material, transverse cylindrical supports at the upper and lower end of said holder, a pencil holding groove formed in said upper support and a calendar-holding means pivoted to said upper support.

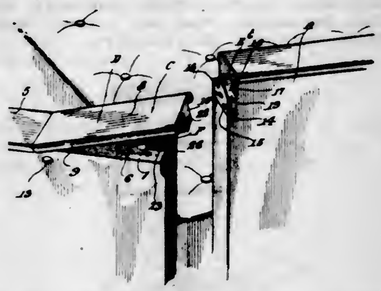
1,347,226. METHOD OF MANUFACTURING SHEETS OF EDIBLE GELATIN. ROBERT ATKINSON MCQUITTY, London, England. Filed June 20, 1919. Serial No. 305,652. 4 Claims. (Cl. 18—15.)

2. A method of manufacturing sheets of edible gelatin in which a coating of liquid gelatin is spread over a flexible foundation, dried thereon and the sheet thus produced stripped therefrom and cut into smaller sheets and these sheets placed in wire netting frames and then momentarily dipped in a bath of water and finally redried in said frames under the influence of a blower.



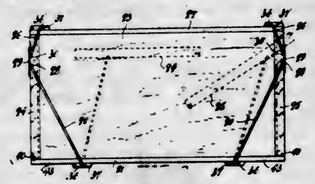
1,347,227. ACCELERATOR FOR AUTOMOBILES. CHARLES L. MITCHELL, Randolph, Nebr. Filed June 26, 1917. Serial No. 177,029. 2 Claims. (Cl. 74—81.)

1. An accelerator for automobiles comprising a standard adapted for securement adjacent the throttle rod connecting arm of an engine structure, a length of wire coiled on the standard to form a sleeve and having one end extended laterally to form an arm adapted for connection with a carbureter throttle valve, and its other end also extended laterally to form an arm, a foot pedal connection for said second arm of the wire, a second length of wire coiled on the standard to form a collar, one end of said coil being extended to form an arm adapted for connection with the throttle rod connecting arm and the other end of the coil being extended and laterally turned to engage the first specified arm of the first named collar coil.



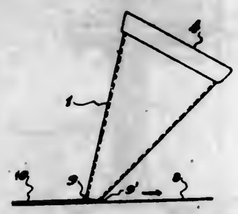
1,347,228. AUTOMOBILE-JACK. JOHN W. PAXSON, Philadelphia, Pa. Filed Nov. 17, 1919. Serial No. 338,484. 3 Claims. (Cl. 254—103.)

1. A lifting jack, comprising the combination of a hollow member, provided with a flange upon its upper end portion, a gear wheel revolubly mounted with respect to said flange and provided with a central threaded aperture, a threaded rod extending through said aperture, a pinion mounted upon said flange and meshing with said gear, an operating member secured to revolve with said pinion, a plate supported in spaced relation



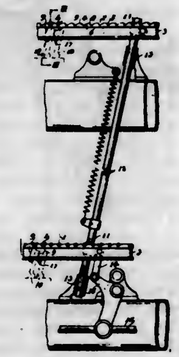
above said flange, and means for supporting said pinion and said last-named member journaled in said flange and in said plate.

1,347,229. AUTOMOBILE-DOOR LATCH. HARMON SCHLEY RICHARDSON, Massillon, Ohio. Filed Nov. 5, 1919. Serial No. 335,853. 8 Claims. (Cl. 292—230.)



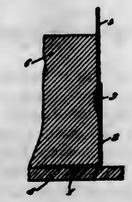
1. A latch for automobile doors including a keeper, a casing, a latching lever carried by the casing, a longitudinal rib formed on the lever and arranged to engage the casing to prevent the lateral movement of the latching lever in relation to the casing, the forward end of the rib being adapted to engage the keeper.

1,347,230. COLLAPSIBLE BOX, CASE, OR CRATE. RICHARD HENRY ROBERTS, Henderson, Auckland, New Zealand, assignor to Percy Nichol Kingswell, One Tree Hill, Auckland, New Zealand, trustee for Angle Brace Collapsible Box Syndicate. Filed Sept. 24, 1918. Serial No. 255,503. 5 Claims. (Cl. 217—15.)



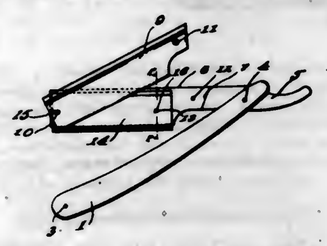
1. A collapsible box having a bottom, detachable sides and ends, a removable cover, lower pivoted braces extending from the bottom diagonally across the sides and horizontally across the ends, upper diagonal braces pivoted to the cover and passing diagonally across the sides and horizontally across the ends when the box is erected, means on the box ends for retaining said upper braces when the box is erected and means on the bottom for engaging the upper braces and holding the parts in the collapsed position.

1,347,231. CONTAINER AND DISPENSING DEVICE. CURTIS J. ROTHERMEL, Philadelphia, Pa., assignor to The Barrett Company, a Corporation of West Virginia. Filed Mar. 12, 1918. Serial No. 221,997. 8 Claims. (Cl. 229—1.)



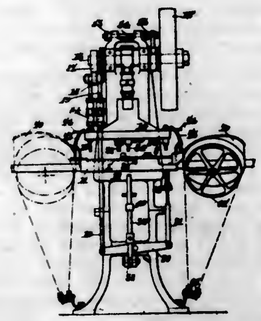
1. A combined container and dispensing device, consisting of a tapering vessel made of flexible material; a flat metal closure for said vessel extending beyond said flexible material in an axial direction; the small end of said vessel being cut off in a plane at an angle to its axis so that it will operate as a dispensing device whereby the distribution of its contents can be thereby controlled.

1,347,232. SHUTTLE-OPERATING MECHANISM FOR EMBROIDERING-MACHINES. HIPPOLYT SAURER, Arbon, Switzerland. Filed Nov. 7, 1919. Serial No. 336,433. 5 Claims. (Cl. 112—95.)



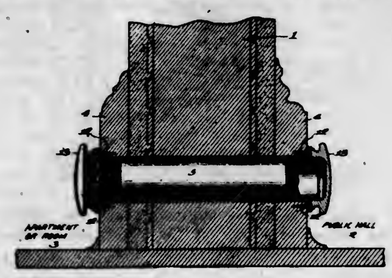
1. In a shuttle operating mechanism for an embroidering machine, the combination of a longitudinally movable shuttle actuating pin, a shuttle operating bar, and means to press the pin against the bar, the pin and the bar having a relatively oblique bearing surface, the one against the other, whereby, as the pin and bar become worn at their bearing surface, the pin is pressed closely against the bar and relative lateral movement of the pin is prevented.

1,347,233. TAG-HOLDER. FRANK GROVER SHUMAN, Chicago, Ill. Filed Oct. 18, 1918. Serial No. 258,681. 1 Claim. (Cl. 40—12.)



A tag holder in the form of an L-shaped member comprising a base and a front plate disposed at right angles to the base, the front plate having upstanding card supporting tongues, the tongues being located relatively near to the lateral edges of the front plate thereby to space the tongues a maximum distance apart and to render them effective as a card supporting means, the tongues being located close to the upper edge of the front plate whereby a maximum portion of a card will be visible above the front plate, the tongues being struck rearwardly from the front plate whereby when an article is placed on the base, a card in the tongues may be bound between the article and the front plate and be supported above the front plate by the article, thereby permitting the front plate to be of a minimum height and still permit the use of a card of relatively great height.

1,347,234. RAZOR. WILLIAM A. STEBBINS, Seattle, Wash. Filed Nov. 4, 1918. Serial No. 261,033. 2 Claims. (Cl. 30—25.)

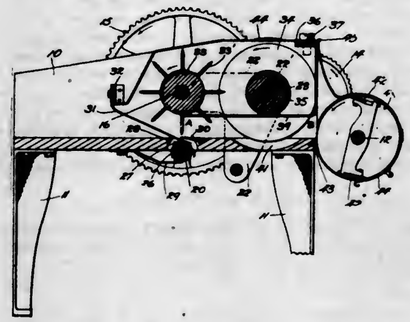


1. A razor including a carrier bar provided with a tang and having a portion of its inner face removed and equipped with a blade, a bar to clamp said blade pivoted at one end to the carrier bar, said pivot performing the additional function of seating the end of the blade and positioned medial of the blade to admit of a reversal of the blade edges, said means including a pin likewise medially positioned and having its opposite end formed to co-act with the latter to limit movement of the said carrier bar, and means to secure the clamping bar to the latter.

1,347,235. MACHINE FOR MAKING METAL BUTTONS. HENRI TOURNEUR, Paris, France. Filed May 14, 1914. Serial No. 838,453. 7 Claims. (Cl. 79—3.)

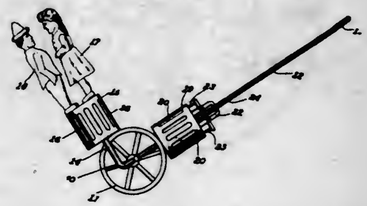
1. In a button making machine, the combination of a pair of coöperating, relatively-movable work carriers provided with feeding notches; tools operable on the work on said carriers; a pawl carrier; pawls carried thereby and engageable in said notches to feed said work carriers relatively to the tools; a drive shaft; a link eccentrically connected therewith at one end; a bell-crank lever having one arm operatively connected with the pawl carrier; a pin-and-slot connection between the other arm of the bell-crank lever and the other end of said link; and a weight operatively associated with said bell-crank lever.

1,347,236. WALL SERVICE-BUSHING FOR VACUUM CLEANING AND OTHER SYSTEMS. HERMAN M. UNDERWOOD, New York, N. Y. Filed May 27, 1916. Serial No. 100,393. 3 Claims. (Cl. 137—111.)



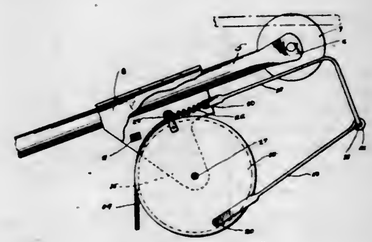
1. In a system of piping for vacuum cleaning and other purposes, a wall bushing fixture comprising a tube or conduit embodied in a wall with ends opening at opposite sides of the wall to constitute a portion of a service line, means for separable attachment of other portions of the service line with the opposite ends of the tubular bushing, and detachable coverings for both ends of the tubular bushing said coverings constituting a normal part of the fixture and serving to prevent communication through the bushing when disconnected from other portions of the service line.

2. In a system of piping for vacuum cleaning and other purposes, a wall bushing comprising a tube or conduit embodied in a wall with ends opening at opposite sides of the wall to constitute a portion of a service line, a system pipe having an outlet in its length, means for detachably connecting a service line at one end with said outlet of the system pipe and at the other end detachably with the wall bushing, and means for detachably connecting the opposite end of the tubular bushing with a portion of a service line leading to a cleaning tool.



3. In a system of piping for vacuum cleaning and other purposes, a wall bushing comprising a tube or conduit embodied in a wall with ends opening at opposite sides of the wall to constitute a portion of a service line, lock nuts attached to the wall bushing at opposite sides of the wall, and closure caps detachably applied to opposite ends of the bushing.

1,347,237. COMBINED CUTTER AND SCRAPER. EDWARD C. WADDINGTON, Woodstown, N. J. Filed Feb. 18, 1919. Serial No. 277,865. 5 Claims. (Cl. 17—18.)

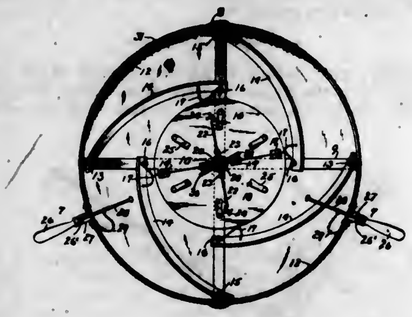


1. A machine of the character stated comprising a fixed trough-like frame, a horizontally disposed scraper-knife mounted upon the floor of said frame for scraping or cutting the fleshy part of meat from hide, means for slicing said fleshy parts into elongated strips, means for feeding said fleshy parts as removed along the floor of said frame toward said slicing means, a cylinder provided with pointed projections rotatable in a plane below and paralleling said feeding means for guiding said hide beneath the floor of said frame in a direction away from said slicing means and means for cutting said strips into small rectangular particles.

1,347,238. TOY. JOSEF WIETECHA, Detroit, Mich., assignor to Nellie Nigbor, Detroit, Mich. Filed Nov. 13, 1919. Serial No. 337,636. 4 Claims. (Cl. 46—45.)

1. In a toy, the combination with a wheel of a handle for pushing and pulling said wheel along a floor and a plurality of drums adapted to be rotated by the rotation of said wheel, one of said drums carrying figural objects and the other a sound producing element, and means for engaging and disengaging one of said drums from said wheel.

1,347,239. TROLLEY-FINDER. WILLIAM F. YANCEY, Portsmouth, Va. Filed July 15, 1919. Serial No. 310,892. 2 Claims. (Cl. 191—84.)



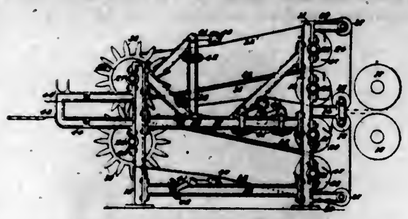
2. An attachment for trolley poles comprising a sleeve for engagement over the pole and having depending side portions, a clamping bolt engaged through the side portions and under the influence of which they are movable toward each other into clamping relation to the pole, a crank disk rotatably mounted between the side portions, a yoke comprising side arms pivoted at one end upon the bolt and having a connecting bight at their other ends centrally displaced in one direction of pivotal movement of the yoke, a trolley rope attached to the disk and adapted to be wound and unwound peripherally thereof, a spring connected with the disk and the bolt in position to hold the disk normally with the rope wound thereon and a pitman connecting the bight of the yoke with the disk.

1,347,240. LIFE-BUOY. ANTON ZUBRYD, Jersey City, N. J., assignor of one-half to Porfyrij Kiselycia, Jersey City, N. J. Filed Oct. 6, 1919. Serial No. 328,724. Renewed June 1, 1920. Serial No. 385,765. 5 Claims. (Cl. 9—4.)

1. A life buoy comprising a framework formed of a plurality of hoops, curved brace arms extending between

the hoops to maintain the same in set up position, a vertical post within the hoops, a platform hinged at oppo-

site sides of said post and a waterproof covering for said hoops.

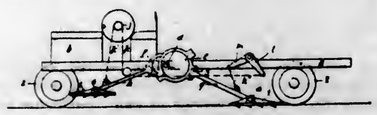


1,347,241. INDEX-TAB. GEORGE J. AIGNER, Chicago, Ill. Original application filed May 14, 1917, Serial No. 168,447. Divided and this application filed July 5, 1917. Serial No. 178,830. 2 Claims. (Cl. 40—2.)

1. A series of index tabs arranged in the form of a strip according to a predetermined arrangement, each of the tabs having a horizontal body portion composed of a folded portion, and attachment legs for each of the tabs projecting angularly from the rear end of the horizontal body portion, one upwardly and one downwardly when the tab is attached to a vertically-disposed sheet, the consecutive tabs of the strip being connected together only by narrow severable attachments at the extreme front edge of the strip holding the tabs in their predetermined arrangement in the strip but permitting of them being readily detached from each other for use.

1,347,242. INTERFOLDING-MACHINE. GEORGE H. BARTLETT, San Francisco, Calif. Filed May 5, 1919. Serial No. 294,751. 9 Claims. (Cl. 270—39.)

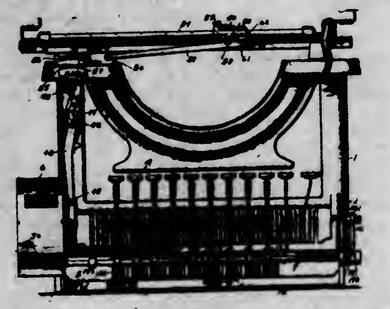
2. In an interfolding machine, a pair of rotary folding rolls, two pairs of perforating rolls, conveyer elements for each folding roll engaged about the latter and about one perforating roll of each pair of the latter and



other conveyer elements engaged about the same perforating roll of each pair of the latter and coöperating with the first named conveyer elements.

1,347,243. VALVE-GRINDING TOOL. EDSON L. BEARDSLEY, Columbus, Ohio, assignor to The Loomis Beardsley Mfg. Company, Columbus, Ohio, a Corporation of Ohio. Filed Mar. 25, 1918, Serial No. 224,456. Renewed June 10, 1920. Serial No. 387,989. 1 Claim. (Cl. 74—14.)

A valve grinder comprising a rotatable stem, a gear fixed to said stem adjacent to the upper end of the latter, a casing carried by said stem and capable of being maintained in a stationary position during the rotation of the stem, a guide member carried by said casing and including curved finger elements, a reciprocatory actuating device disposed within said guide member, said device being formed from stamped sheet metal and having vertically disposed ribs, the latter being situated so as to be received and guided by said fingers, and said actuating device being provided with a series of apertures disposed to mesh with said gear, whereby upon the operation of said device said gear and stem will be oscillated.



1,347,244. HEAVY MOTOR-TRACTOR. RAOUL BERNAT, Bordeaux, France. Filed Apr. 3, 1918. Serial No. 226,542. 3 Claims. (Cl. 180—8.)

1. In a high power tractor, the combination of a chassis having front and rear wheels; a motor mounted

on the chassis; two sets of pushing crutches embodying limbs pivotally mounted at their upper ends for lateral swinging movement and shoes pivotally connected to the lower ends of said limbs for vertical swinging movement, one set of crutches for propelling the tractor forwardly and the other set for propelling it rearwardly; mechanism for alternatively lowering or raising either set of crutches toward or from the ground to throw it into or out of action and to control the duration of engagement of the shoes with the ground and, consequently, the direction and speed of the tractor; operating connections between the motor and the crutch sets; driving connections between the motor and the rear wheels; and crutch mechanism operable to throw either driving connection into action to enable the tractor to be turned in either direction.

1,347,245. CALCULATING-MACHINE. HEBSTER A. BOWERS, Reading, Pa. Filed June 22, 1912, Serial No. 705,257. Renewed Dec. 3, 1919. Serial No. 342,303. 51 Claims. (Cl. 235—59.)

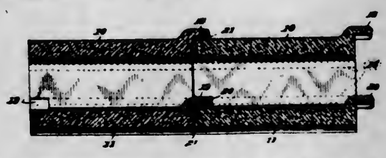
1. In a calculating machine a series of index wheels, a transmitting gear for each index wheel, a pinion between the index wheel and transmitting gear in mesh with the index wheel but normally out of mesh with the transmitting gear, a sliding gear arranged to be brought in mesh with each of the transmitting gears in turn, means for rotating the sliding gear, a slide for shifting the gear and means operated by the slide for moving the pinion into mesh with the transmitting gear to be operated by the sliding gear.

4. In a calculating machine, a series of index wheels, a shaft on which the index wheels are mounted to rotate, a transmitting gear for each index wheel, a bell crank lever for each index wheel mounted to swing on the shaft on which the index wheels are mounted and having a rearwardly extending arm and a downwardly extending arm, a pinion carried by each arm in mesh with the index wheel and adapted to mesh with the transmitting gear, means for swinging the bell crank lever into position to bring the pinion carried by the downwardly extending arm into mesh with the transmitting gear, means for locking the bell crank lever in such position, and means for unlocking the bell crank lever and swinging it into position to bring the pinion on the rearwardly extending arm into mesh with the transmitting gear.

7. In a calculating machine for use with a typewriting machine having a paper carriage and numeral keys, a series of index wheels, a shaft on which the index wheels are mounted to rotate, a transmitting gear for each index wheel, a bell crank lever for each index wheel mounted to swing on the shaft on which the index wheels are mounted and having a rearwardly extending arm and a downwardly extending arm, a pinion carried by each arm in mesh with the index wheel and adapted to mesh with the transmitting gear, means for swinging the bell crank lever into position to bring the pinion carried by the downwardly extending arm into mesh with the transmitting gear, means for locking the bell crank lever in such position, a slide movable parallel with the line of the shaft on which the index wheels are mounted, means operated by the paper carriage for moving the slide, and means operated by the slide for unlocking the bell crank lever and swinging it into position to bring the pinion on the upwardly extending arm into mesh with the transmitting gear.

11. In a calculating machine for use with a typewriting machine having a paper carriage and numeral keys, in combination with the paper carriage and numeral keys, a series of index wheels, a shaft on which the index wheels are mounted to rotate, a transmitting gear for each index wheel, a bell crank lever for each index wheel mounted to swing on the shaft on which the index wheels are mounted, a pinion carried by each arm of the bell crank lever in mesh with the index wheel and each adapted to mesh also with the transmitting gear and means operated by the paper carriage for swinging the bell crank lever to bring one or the other of the pinions into mesh with the transmitting gear and means operated by the numeral keys for rotating the transmitting gear.

17. The combination with a shaft and means for rotating it, of a ratchet wheel fast on the shaft, a sleeve mounted to rotate on the shaft carrying a spring pressed pawl adapted to travel over the teeth of the ratchet wheel in one direction, and means for rotating the sleeve simultaneously with the rotation of the shaft.

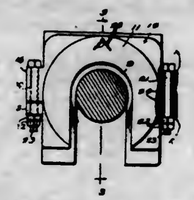


1,347,246. MOTOR-CAR SIGNAL. NEWMAN T. BROWN, Seattle, Wash. Filed Feb. 20, 1918. Serial No. 218,277. 14 Claims. (Cl. 116—46.)

1. A turning and stopping signal, comprising a casing having a movable closure; a signal in said casing mounted on said closure; means for opening said closure; and means for automatically projecting said signal when said closure is opened longitudinally of and beyond the outer end of the closure.

2. A turning and stopping signal, comprising a casing having an outwardly-swinging closure; a signal mounted slidably on said closure and normally housed in said casing; means for swinging said closure outwardly; and means for automatically sliding said signal longitudinally of and beyond said closure when the latter so so swung.

1,347,247. SEGMENT-BLOCK. MARSHALL CAINE, Barberton, Ohio. Filed Dec. 3, 1918. Serial No. 265,161. 4 Claims. (Cl. 72—38.)

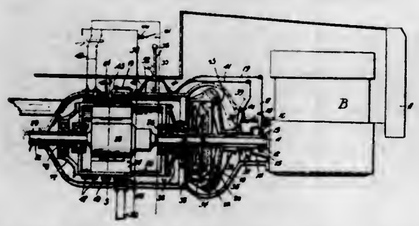


4. A segment block including concentric spaced arcuate inner and outer walls connected by radial walls to form an open longitudinal air passage in the block, an offset outwardly projecting arcuate flange formed upon the inner wall at one end of the block and arranged for reception within the end of the air passage of an adjacently positioned similar block, and an offset outwardly projecting arcuate hub flange formed upon the outer wall at said one end of the block.

1,347,248. REMOVABLE BEARING-PLATE. BUEL H. CANADY, Winslow, Ariz. Filed Jan. 15, 1920. Serial No. 351,681. 4 Claims. (Cl. 64—25.)

2. The combination with a journal box, of lugs secured to one end thereof and having upper inclined faces, said

lugs having openings formed therethrough, a removable bearing plate to engage the end of the journal box and to be separated therefrom by a vertical movement, lugs



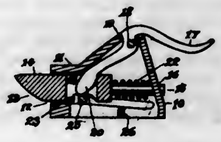
carried by the removable bearing plate and provided with inclined faces to engage the first named inclined faces, the second named lugs having openings, and bolts passing through the openings of the first and second named lugs.

1,347,249. HAND-SEEDER. AMANDO M. CASTILLO, Aringay, Philippine Islands. Filed July 29, 1918. Serial No. 247,266. 5 Claims. (Cl. 111—92.)

1. In a hand seeder, the combination with a body having at its upper portion a seed hopper and spout and at its lower portion a tubular guide recessed at its lower end and notched in the wall of the recess; of a seed tube slidably mounted in said guide, its upper and lower ends being closed and its wall having delivery openings just above its lower end and an inlet port adapted to communicate with said spout when the tube is raised, a spring pressing said tube normally downward, a shoulder around its lower end beneath its delivery openings, a sleeve slidable around said lower end above the shoulder and within said recess, a spring bearing said sleeve normally downward, a latch on the sleeve adapted to engage said notch when the sleeve is raised by the rise of the tube, and means on the tube for tripping said latch by the descent of the tube.

1,347,250. ELECTROMECHANICAL PROPELLING AND TRANSMITTING MECHANISM. ABSOLAM F. CLARK, Los Angeles, Calif. Filed Mar. 27, 1917. Serial No. 157,699. 8 Claims. (Cl. 290—23.)

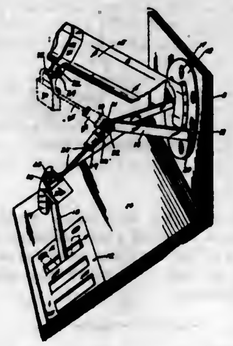
1. In a power unit, the combination with a gas engine, and a driven shaft, of a dynamo-electric machine having rotatable sections one of which is connected to the driven shaft, clutching means between the gas engine and the driven shaft, a second clutching means between the gas engine and the other section of the dynamo-electric machine, and means for controlling the rotation of said other section of the dynamo-electric machine and adapted to maintain the same stationary when said second clutching means is inoperative.



2. In a power unit, and in combination, a dynamo-electric machine having independently rotatable sections, a driven shaft connected to one of said sections, a gas engine, a clutch between the gas engine and the driven shaft, a second clutch between the gas engine and the other dynamo-electric machine section, means for controlling the rotation of said other section, and a connection between said last-named means and said first clutch to hold the said other section of the dynamo-electric machine stationary when said first clutch is engaged.

3. In a power unit, the combination with an internal combustion engine and a drive shaft, of an armature carried by said drive shaft, a field member rotatably mounted about the armature, a clutch member on the drive shaft, a second clutch member on the field member, a brake for application to the field member, and complemental clutch members on the shaft of the engine adapted to be interlocked one at a time with the clutch members upon the drive shaft and the field member.

4. In a power unit, the combination with an internal combustion engine and a drive shaft, of an armature carried by the drive shaft, a field member rotatably mounted about the armature, a pair of clutch members independently shiftable upon the crank shaft of the engine, clutch members on the drive shaft and the field member, a brake for application to the field member to control the turning of the same, and a connection between the clutch members of the crank shaft and the drive shaft and said brake member for simultaneously interlocking the drive shaft and the armature to the crank shaft and arresting the rotation of the field member.



5. In a power unit, the combination with an internal combustion engine and a drive shaft, of an armature mounted on the drive shaft, a field member rotatably mounted about the armature, clutch members on the drive shaft and on the field member, a pair of independently shiftable clutch members mounted on the crank shaft of the engine, means for operating said clutch members for interlocking engagement one at a time with the clutch members of the drive shaft and the field member, and a brake connected to the field member for controlling the operation thereof and having connection with the clutch member of the crank shaft adapted for interlocking engagement with the drive shaft.

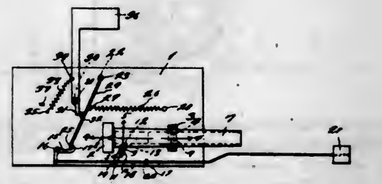
1,347,251. LOCK, BOLT, OR CATCH FOR DOORS, WINDOWS, SHUTTERS, OR THE LIKE. THOMAS P. CONLON, New York, N. Y. Filed Oct. 25, 1915. Serial No. 57,783. 4 Claims. (Cl. 292—335.)

1. In a locking device, a casing, a spring bolt in said casing provided with a nose adapted to project from said casing, means for retracting the bolt within said casing, means adapted to deadlock said bolt in the fully projected position thereof, said means for retracting said bolt adapted to disengage said deadlocking means, means adapted to prevent full projected movement of said bolt after retraction and adapted to hold said bolt out of engaging position with said deadlocking means, said last named means adapted to be disengaged by shock of impact to permit full thrust movement of said bolt and engagement therewith of said deadlocking means.

1,347,252. CLUTCH-PEDAL LOCK. JOHN S. CUNNINGHAM, Des Moines, Iowa. Filed Sept. 23, 1919. Serial No. 325,774. 3 Claims. (Cl. 70—128.)

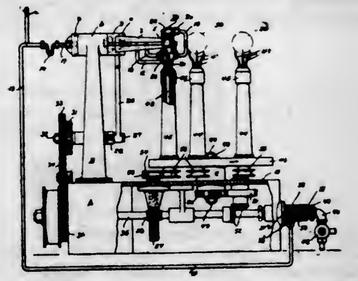
3. In a device of the class described, adapted to be mounted on an automobile having an inclined footboard, a pedal adapted to reciprocate within a slot within the footboard, said pedal having an opening therein, a dashboard, a steering column secured to and inclined upwardly and rearwardly from the dashboard adpacent to the pedal, said steering column having an outwardly extending flange with openings therein, whereby it may be secured to the dashboard, a bracket comprising diverging arms having feet at their forward ends, means for securing said feet to the steering column flange, a locking bar pivotally mounted at the rear end of said bracket, means for adjusting the length of said locking bar, a holding device mounted on the steering column, means for moving said holding device to a plurality of adjustet positions and a locking device adapted to coact with the locking bar, and selectively with both the pedal and holding device, whereby the length of the locking bar may be adjusted to accurately position the pedal when locked in a pre-determined place, and the holding device may be moved to position around the steering column to correspond with the length of the locking bar.

1,347,253. TREAD. PHILIP W. DALRYMPLE, Baltimore, Md. Filed Apr. 12, 1919. Serial No. 289,707. 11 Claims. (Cl. 305—10.)



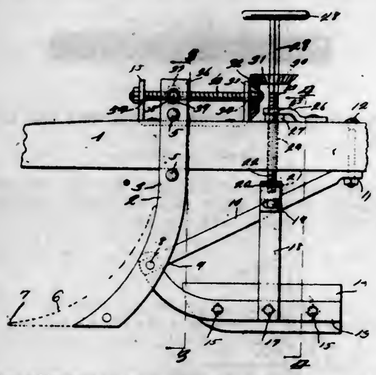
1. A belt tread consisting of a continuous track or guide, a series of followers on the track, a tension member connecting the followers, legs pivotally connected to the respective followers, a foot on each leg, and a flexible tension member engaging each leg at a point spaced from its pivot, applying an equal downward thrust to each foot of those engaging the surface being traversed, permitting the feet to conform to irregularities of said surface substantially without variation of thrust, and means for moving the tension member and the track followers around the track.

1,347,254. BELTING FABRIC. CHARLES H. DANKMEYER, Baltimore, Md. Filed May 14, 1920. Serial No. 381,237. 2 Claims. (Cl. 139—9.)



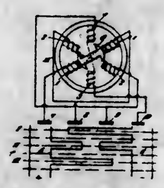
1. A belting fabric having a cotton warp and a hemp filling.

1,347,255. ANIMAL GUN-TRAP. FLOY E. DAVENPORT, Callaway, Nebr. Filed Oct. 12, 1917. Serial No. 196,142. 1 Claim. (Cl. 43—84.)



In an animal trap, a base provided with an upstanding breech block, a firing pin in said breech block, a pair of spaced trunnions mounted on the base, a gun barrel tiltably pivoted between said trunnions, and having its axis in horizontal alinement with the firing pin, a recess in one side of the gun barrel in the rear of the trunnions, a spring arm rising upwardly from the base, said spring arm being provided with a right angled lug adapted to be received by the recess in the gun barrel when the gun barrel is in horizontal position, said spring arm and lug being so positioned that when it is being moved to its firing position after loading operation the lug carried by the spring arm will be engaged by the convexed surface of the gun barrel and cam over said surface until it springs into the recess.

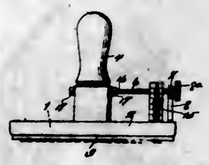
1,347,256. COATING APPARATUS. LAURENCE R. DAVIS, Providence, R. I., assignor to Revere Rubber Company, a Corporation of Rhode Island. Filed Oct. 4, 1918. Serial No. 256,883. 13 Claims. (Cl. 91—45.)



1. In apparatus of the character described, the combination with a spraying device, of a series of carriers for the articles to be coated, means for successively moving the carriers into register with said spraying device, and controlling means for the spraying device adapted to automatically shut off the spray prior to the movement of a carrier into register therewith, the said controlling means comprising a drive shaft for the carrier-operating means, a sleeve valve carried by the drive shaft at one end thereof, a casing for the valve, means for admitting fluid pressure to the valve, and a conduit affording communication between the valve and said spraying device.

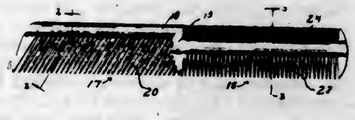
1,347,257. ADJUSTABLE STANDARD AND HEEL-KNIFE. ROBERT S. DAVIS, Powhatan, La. Filed Sept. 19, 1919. Serial No. 324,894. 2 Claims. (Cl. 97—26.)

1. An adjustable standard and heel knife comprising a heel knife carrying mamber carried by a plow beam, said knife carrying member being disposed below the plow beam, the lower end of the standard and the forward end of the knife carrying member being pivoted to each other, the standard comprising two members held in spaced relation to each other and having their upper ends arching the plow beam, a bracket carried on the upper face of the plow beam and having rotatably mounted in bearings thereof a threaded shaft, said threaded shaft passing through a pivoted trunnion block having bearings in the upper end of the standard, a gear carried by said threaded shaft, said gear meshing with a gear carried by a vertically disposed threaded shaft, the lower end of said vertically disposed threaded shaft being threaded in a member pivotally secured to the knife carrying member, the gear carried by the vertically disposed threaded shaft being rotatable with said shaft but slidable thereon, and means whereby said vertically disposed threaded shaft may be rotated to raise and lower the plow point and simultaneously adjust the heel knife carrying member.



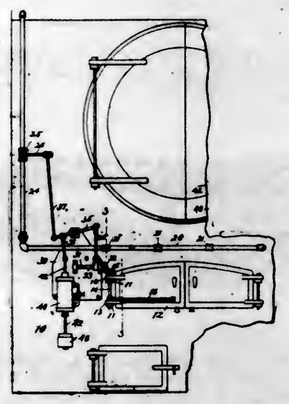
1,347,258. ELECTRICAL SIGNALING SYSTEM. ARTHUR TREVOR DAWSON and GEORGE THOMAS BUCKHAM, Westminster, London, England, assignors to Vickers Limited, Westminster, London, England. Filed May 29, 1918. Serial No. 237,361. 3 Claims. (Cl. 172—239.)

1. The method of operating an electric motor comprising a number of field poles with windings therefor and a cooperating armature which consists in selectively energizing said windings to move said armature from one position to another and in energizing a number of said windings to retain magnetically said armature against movement between the period of energizing two successive selections of said windings.



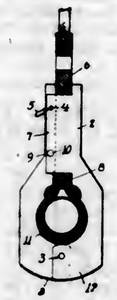
1,347,259. AMOUNT-CERTIFICATION RUBBER CHECK-STAMP FOR BANKS. JOSEPH DRASCHA, Flint, Mich. Filed Jan. 28, 1920. Serial No. 354,665. 5 Claims. (Cl. 101—111.)

1. In an amount certification rubber check stamp, the combination with a body provided with a rubber impression face for stamping bank checks, a handle for the body, said body having an opening, an endless belt provided on its outer face with various amounts, means for supporting the belt, whereby but a single amount may appear through



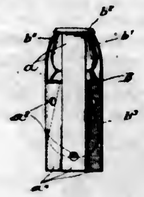
the opening at one time, said means comprising a roller in said opening, a rotating shaft mounted in bearings of the handle, and of the body and provided with a sprocket to be engaged by said belt which also passes over the roller in the opening.

1,347,260. COMB. SAMUEL DESMARAIS, Cleveland, Ohio. Filed Nov. 22, 1919. Serial No. 339,862. 12 Claims. (Cl. 132—3.)



1. In a barber's comb, a frame comprising two rib portions in one plane offset from each other by a perpendicular rib portion, teeth extending from one side of one of said offset portions and from both sides of the other.

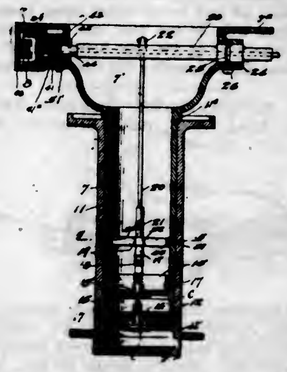
1,347,261. SMOKE-PREVENTING FURNACE-DOOR CHECK. JOSEPH P. DOYLE, Lakewood, Ohio. Filed Jan. 17, 1917. Serial No. 142,788. 1 Claim. (Cl. 110—55.)



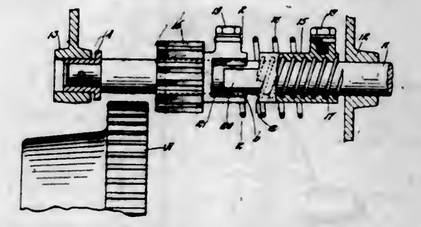
The combination with a furnace having a door, a vertical door pintle to which the door is fixed, a bevel gear fixed to said door pintle, a steam pipe arranged to discharge steam into the furnace, and a valve for said steam pipe, of a plate detachably secured to the front end of the furnace adjacent the door thereof, and the following coöperating parts supported upon said plate, viz. a horizontal shaft, a bevel gear fixed to said shaft in mesh with the bevel gear on the door pintle, an arm fixed to said shaft, a dash pot fixed to said plate, a dash pot piston, a two-arm rocking lever pivoted to said plate, a link connecting the arm on said shaft with an arm of said rocking lever, a link connecting the other arm of said rocking lever with the dash pot piston, and a third link connecting the same arm of the rocking lever with the valve in the steam pipe.

1,347,262. AUTOMOBILE-LOCK. FREDERICK C. H. EICHORN, Boston, Mass., assignor of two-thirds to James W. Burke and Albert H. Eichorn, Boston, Mass. Filed July 2, 1919. Serial No. 308,628. 2 Claims. (Cl. 70—90.)

1. A locking device for automobiles comprising a pair of substantially like members pivoted together and shaped to partially inclose the tire and rim of a wheel when they are swung together, each member having an extension rigid therewith adapted to reach to and past the adjacent portion of the periphery of the wheel-hub, and means for locking said members and extensions in engagement with the rim and hub, said extensions clamping the hub between them and thereby preventing the locking device from being turned on the rim and tire.



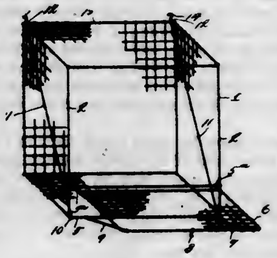
1,347,263. SHAVING-BRUSH CASE. AMOS ELLIS, Philadelphia, Pa. Filed Nov. 20, 1918. Serial No. 263,280. 4 Claims. (Cl. 206—15.1.)



3. A shaving brush case comprising a perforated body of continuous contour and inwardly inclined resilient fingers formed integrally with said body and forming an end of said case, in combination with a brush having a handle provided with a groove adapted to be engaged by said fingers.

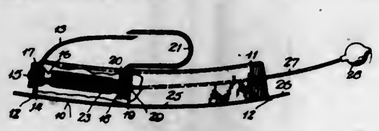
1,347,264. BARBER'S CHAIR. JOHN R. EMMERT, Chicago, Ill. Filed Oct. 29, 1918. Serial No. 260,165. 4 Claims. (Cl. 155—25.)

8. The combination with the fixed cylinder, and core having opposed openings, of a cross head and diametrical braces therein, brake blocks in said openings at the ends of said braces, and an operating stem in the cross head having cam faces to engage said braces and cause frictional contact between the blocks and the wall of the cylinder.



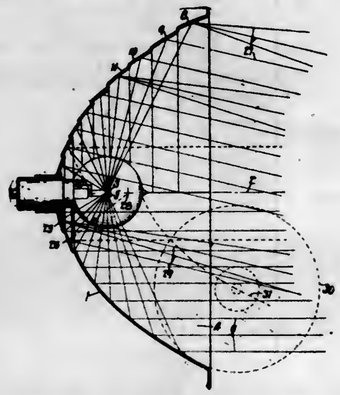
1,347,265. GEAR-ENGAGING MECHANISM FOR SELF-STARTERS. STEPHEN I. FEKETE and STUART G. BAITS, Detroit, Mich., assignors to Essex Motors, Detroit, Mich., a Corporation of Michigan. Filed Jan. 22, 1919. Serial No. 272,409. 5 Claims. (Cl. 74—7.)

1. In combination with a gear, a driving shaft having a screw threaded portion, a nut mounted on said shaft and bearing one member of a clutch, a pinion mounted on the said shaft movable thereon and having the other member of said clutch, and a yielding connection between said nut and said pinion.



1,347,266. HEN'S NEST. EUGENE L. FINK, Deloit, Iowa. Filed Apr. 14, 1920. Serial No. 373,841. 2 Claims. (Cl. 119—45.)

1. A hen's nest comprising a rectangular shaped body, one wall of said body being provided with an entrance, a closure for said entrance, said closure being pivoted to the bottom of the entrance, means for supporting the closure in a horizontal position so as to form an entrance plat-



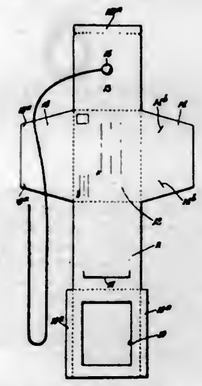
form, diagonally disposed brace wires extending diagonally across the sides of the nest, the lower ends of said wires being connected to the lower wire of the front wall, the upper ends of said brace wires being twisted around the rear upper wire of the nest, the brace wires beyond said upper rear wire of the nest being formed into hooks forming means for supporting the nest as a whole.

1,347,267. HAT-FASTENER. BOHUMIL FRONEK, Chicago, Ill. Filed Feb. 6, 1920. Serial No. 356,681. 7 Claims. (Cl. 132—25.)

1. A hat fastener embodying a body portion, a hair engaging prong connected therewith and extending therefrom, a coöperating hair engaging prong movably mounted upon the said body portion, means tending normally to move the prongs toward each other into coöperative relation, an extended casing completely housing the said means in any position of the prongs with respect to each other, and means whereby the prongs may be separated against the stress of the first recited means.

1,347,268. PARABOLIC SECTIONAL REFLECTOR. CHARLES E. GODLEY, Detroit, Mich., assignor to Edmunds and Jones Corporation, Detroit, Mich., a Corporation of New York. Filed Sept. 17, 1917. Serial No. 191,684. 8 Claims. (Cl. 240—41.)

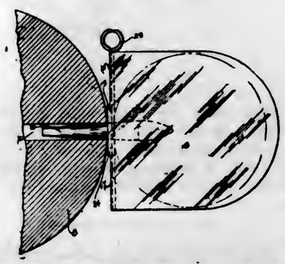
1. A reflector having upper and lower halves, the reflecting surface of the main portion of the lower half of the reflector conforming to a true paraboloid, the upper half of the reflector including a plurality of sectors of paraboloidal surfaces, each sector of the upper half having its own focal length, the foci of the sectors being substantially at a common point which is located rearwardly from the focus of the main portion of the lower half of the reflector.



2. A reflector comprising an upper portion and a lower portion, the inner face of the lower portion being a paraboloidal surface, the inner face of the upper portion including a plurality of narrow transversely extending strips of different paraboloidal surfaces, the foci of the last mentioned surfaces being rearward of the focus of the first mentioned surface.

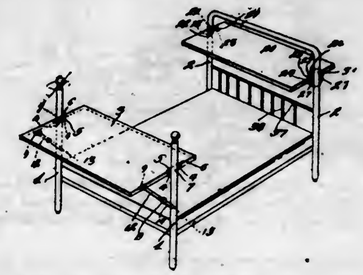
3. A reflector having two portions located at different levels, said reflector having a longitudinal axis, the inner face of one of the portions being a paraboloidal surface, the inner face of the other portion including a plurality of narrow transversely extending strips of different paraboloidal surfaces, said strips being slightly offset from one another and having foci spaced from the focus of the first mentioned surface longitudinally of the reflector.

4. A cup shaped reflector formed of thin sheet metal, the upper portion of the reflector including a plurality of transversely extending strips of paraboloidal surfaces offset slightly from each other and having different focal lengths, the foci of said surfaces substantially coinciding with each other.



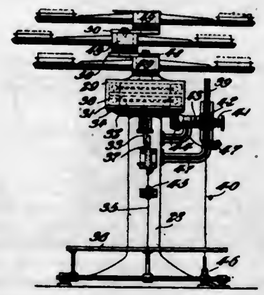
5. In combination, a sheet metal reflector having an upper portion, a lower portion, and a longitudinal axis, the lower portion constituting substantially the lower half of said reflector and having its inner face conforming to the surface of a paraboloid the focus of which lies substantially on the longitudinal axis, the upper portion constituting substantially the upper half of the reflector and having its inner face formed of a plurality of substantially parallel narrow transversely extending strips conforming to the surfaces of different paraboloids, the portion of each of the surfaces which has the greatest diameter being forward and the foci of said last named paraboloidal surfaces being rearward of the first mentioned focus.

1,347,269. MAILING-FRAME. FLORANCE COLGATE GREBLE, New York, N. Y. Filed May 2, 1919. Serial No. 294,313. 5 Claims. (Cl. 40—149.)



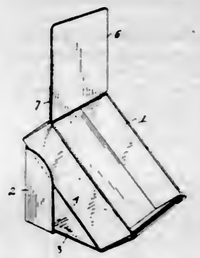
1. A mailing frame consisting of a frame and a cover hinged together, flaps secured to the sides of one of said parts to inclose the other of said parts when said parts are folded together, a flap secured to the end of one of said first-mentioned parts which is opposite to said hinge, said last-mentioned flap being adapted to serve as a base, and means for securing the free edge of said frame to the corresponding edge of said base.

1,347,270. SAP SPOUT AND COVER. MICHAEL HANAUER, Tolland, Mass. Filed Jan. 29, 1920. Serial No. 354,801. 2 Claims. (Cl. 47—11.)



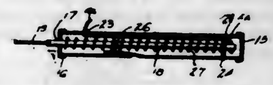
1. The combination of a spout, with a flange formed integral therewith and with a forwardly projecting web formed with an opening of a hook having an eye, one end of which passes through said opening.

1,347,271. TABLE ATTACHMENT FOR BEDSTEADS. WILLIAM L. HARTMAN, Palmyra, Ind. Filed Feb. 21, 1916, Serial No. 79,748. Renewed Dec. 18, 1919. Serial No. 345,913. 1 Claim. (Cl. 5—41.)



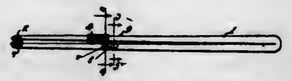
A table attachment, comprising in combination with a rectangular tubular arch frame for the end of a bedstead, a table board constituting a panel for said frame, the opposite end edges of said board or panel having elongated recesses, plates secured in said recesses and provided with axially alined trunnion pins, the opposite tubular sides of said frame having axially alined bearings in which said trunnion pins are rotatably mounted, whereby the board or panel may be disposed perpendicularly, horizontally, or at various intermediate angles, one of said plates being circular and having a plurality of apertures annularly arranged, one of the tubular sides of the frame having apertures diametrically opposed having the same axis to aline axially with any one of the apertures of said circular plate as it is rotated, one of the apertures of the tubular side being formed in the outer portion of the wall of the side and larger than the other diametrically opposite aperture, a plug detachably threaded in the larger aperture, a detent pin movably mounted in said plug and passing through the diametrically opposite aperture of the inner portion of the wall of the side, whereby the inner extremity of the pin may engage any one of the apertures of the plate when its aperture registers with the pin, a second pin extending transversely of the detent pin, and a coil spring between the second pin and the inner end of the plug, which is removable, whereby the detent pin and its attendant parts may be detached from the side of said frame.

1,347,272. FILING-RECEPTACLE. LEONARD J. HOGG, Philadelphia, Pa. Filed Jan. 11, 1916. Serial No. 71,429. 1 Claim. (Cl. 45—3.)



In a device of the character stated, the combination of a plurality of holders for filing devices, crank arms forming respectively journals for said holders, and common means for connecting and supporting said crank arms for rotary movement, whereby a plurality of said holders may be simultaneously swung to a new position and each being independently rotatable of the others.

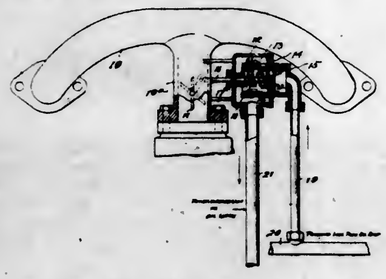
1,347,273. DISPLAY-CARTON. JOHN V. HOAR, East Cleveland, Ohio, assignor to Albert T. Fischer, Cleveland, Ohio. Filed Jan. 16, 1920. Serial No. 351,906. 11 Claims. (Cl. 206—44.)



1. A display carton having a body portion, an easel member adapted to support the body portion in inclined position, and members permanently securing the top and bottom portions of the easel respectively with the body portion whereby the easel is held against tipping, said members being foldable to a position on top of the said body portion of the carton.

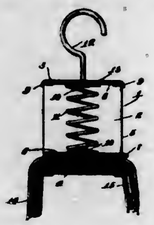
1,347,274. SIGNAL DEVICE FOR AUTOMOBILES. SQUIRE S. HOWELL, Des Moines, Iowa. Filed Oct. 24, 1919. Serial No. 333,070. 1 Claim. (Cl. 116—50.)

In a signal device for automobiles or the like comprising a tubular shaped casing adapted to be fixed to an automobile windshield or the like, a removable cap having a central opening therein fixed to one end of said casing, a rod slidably mounted in said cap and partially received in said casing, a second cap removably fixed to the free end of said casing, said rod being provided with an indicating member on its end extended beyond the casing, a collar fixed to said rod on its inner end within said casing, said collar being substantially the same diameter as the interior of the casing, whereby the rod will be centered by the opening within said first cap and said collar, said casing having a curved slot formed in its side intermediate of its ends and extending substantially a quarter of the circumference of said casing, a pin formed on said collar and adapted to project through said slot, whereby the longitudinal movement of the rod will cause it to rotate substantially a quarter revolution whereby the indicating member will be moved from a horizontal position to substantially vertical position, a cord fixed to said collar and extended through the casing near its forward end, a spring around said rod and extended between the collar and said first cap, whereby the rod will be yieldingly held in its rear limit of movement, the parts being so arranged that when the cord is drawn the indicating member will be moved outwardly to display position against the action of the spring and when the cord is released, the rod will be returned to its rear limit of movement.



1,347,275. DENTAL INSTRUMENT. EUGENE W. IDEN, Cleveland, Ohio. Filed Sept. 2, 1919. Serial No. 321,050. 1 Claim. (Cl. 32—10.)

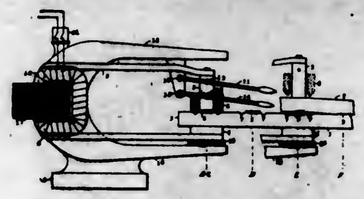
A dental instrument comprising a pair of jaws with handle portions connected together at the rear end, and a



sliding clip mounted upon said handle portions and movable along the same to open or close the jaws said clip having projections engaging in slots in the handle to hold the same in place.

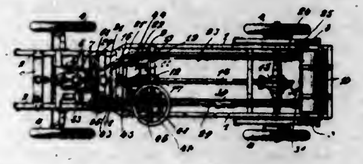
1,347,276. INTERNAL-COMBUSTION ENGINE. ROYAL K. JOHNSON, Cleveland, Ohio, assignor to The Minerva Engine Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 17, 1918. Serial No. 229,041. 6 Claims. (Cl. 264—14.)

1. In combination with an internal combustion engine having a throttle valve and a circulating system for engine lubricant, high and low pressure by-pass pipes adapted to be connected thereto, and a valve responsive to increase of oil pressure due to increase of engine speed for gradually increasing the by-passing of oil as the engine speed increases, thereby preventing excessive rise of pressure in the lubricating system, said valve being connected to the throttle valve.



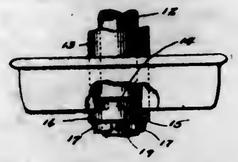
1,347,277. SHOE-LACE HANGER. ROMAN M. KEMPF, Columbus, Ohio. Filed Nov. 26, 1919. Serial No. 340,872. 2 Claims. (Cl. 211—17.)

2. A bracket for holding shoe laces comprising a rectangular casing, a horizontally situated clamping plate slidably mounted within said casing between the end walls thereof, a bearing plate removably mounted in the top of said casing, coil springs situated between said bearing plate and said clamping plate and normally serving to force the latter toward the bottom of said casing, and a hook member rigidly carried by said bearing plate and adapted to occupy a slot formed in the top of said casing, said hook member permitting of the withdrawal of said plates from said casing.



1,347,278. METHOD OF ELECTRICALLY WELDING METAL PLATES. CHARLES H. KICKLIGHTER, Macon, Ga. Filed May 5, 1920. Serial No. 379,170. 15 Claims. (Cl. 219—10.)

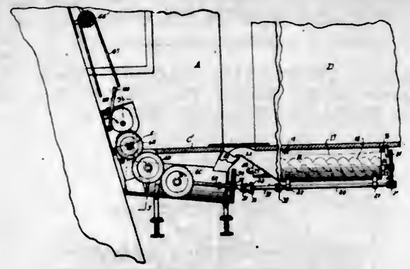
1. The method of fastening two pieces of metal together, face to face, which consists of welding flat metallic bodies to the surface of one of the pieces of metal by the application of pressure and heating electric current and forming depressions thereabout in close proximity thereto by applying a tool with annular edge to said surface, of bringing into contact with the metallic bodies the surface of the second said piece of metal, and by the application of pressure and heating electric current of welding the



second piece of metal to the metallic bodies and forcing the metallic bodies into the depressions adjacent thereto so that the said pieces of metal come into immediate contact.

1,347,279. MOTOR-VEHICLE. DAVID KRAUS, New York, N. Y. Filed July 16, 1917. Serial No. 180,765. 4 Claims. (Cl. 60—11.)

1. In an apparatus of the class described, the combination with the propelling means of a vehicle, of a fluid pressure operated motor connected therewith, a reservoir adapted to contain the fluid under pressure connected with said motor, manually controlled means for controlling the amount of fluid under pressure to be delivered to said motor as well as for controlling the direction of flow thereof, whereby said motor may be driven in different directions, a liquid fuel driven motor, pumping means driven by the latter and interposed between the same and said fluid pressure reservoir, and means operated by the pressure of the fluid in said reservoir for controlling the connection between said second named motor and said pumping means and for regulating the quantity of fuel supply to said second named motor.

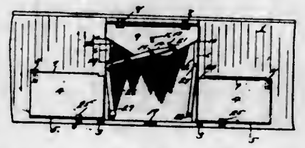


1,347,280. CAR-AXLE MOUNTING. JOHN T. KRIEGER, St. Louis, Mo., assignor to Lincoln Steel and Forge Company, St. Louis, Mo., a Corporation of Missouri. Filed July 28, 1919. Serial No. 313,847. 6 Claims. (Cl. 295—49.)

1. The combination with an axle and wheel mounted thereupon, the outer end of the hub of which wheel is provided with shoulders, of a lock washer secured to the axle adjacent to the wheel, and said lock washer being provided with shoulders adapted to engage the shoulders on the hub of the wheel.

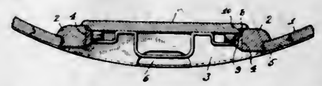
1,347,281. LOCOMOTIVE-STOKER. HAMILTON LINDSAY, Willoughby, Ohio. Filed Apr. 9, 1917. Serial No. 160,631. 6 Claims. (Cl. 110—115.)

1. In a locomotive stoker, the combination of means on the locomotive for feeding coal to the fire box, including a conveyer, a separate conveyer on the tender freely overhanging the conveyer on the locomotive and adapted to feed coal into a position to drop by gravity



into the locomotive conveyer and a movable grate on the tender for causing a regulated flow of coal to the tender conveyer.

1,347,282. WIRE-TWISTING TOOL. JOHN MCDONALD, West Haven, Conn. Filed May 19, 1919. Serial No. 298,164. 2 Claims. (Cl. 140—119.)

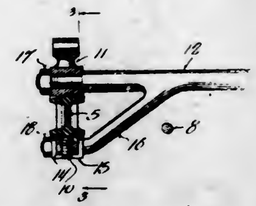


2. A wire twisting tool comprising a handle member having a head thereon, said head having a depression therein provided with a centrally disposed round aperture, a detachable plate secured to said head and provided with a depression and round aperture in registration with the depression and aperture of the tool head, registering slots extending from the aperture to the end of the tool, a rotatable disk mounted in the depressions of the head and plate, said disk being provided with bosses, said bosses having bearings in the round openings of the head and plate, radial slots for the reception of wires, said slots being carried by said disk, chambers in the tool head and plate thereby forming a chamber, a spring actuated dog pivoted in said chamber, notches carried by the periphery of the rotatable disk and adapted to be coöperated with by the pivoted dog so that an intermittent rotation may be imparted to the disk when an oscillatory movement is imparted to the tool handle, said notches being so positioned in relation to the radial slots and wire receiving slot in the tool head that during a twisting operation they will be out of registration.

1,347,283. CAR-DOORS. JOSEPH L. MACKEY, Fowler, Ill. Filed Mar. 19, 1920. Serial No. 367,041. 2 Claims. (Cl. 20—27.)

1. A car door comprising a pair of door sections rectangular shaped, the outer lower corners of said rectangular shaped door sections being pivoted to the side of the car adjacent the lower outer corners of the door opening, means for supporting said door sections when they are in open position, a horizontally hinged door section hinged to the upper edge of the door opening, an aperture in said horizontally hinged door section, said aperture being adapted to receive lugs carried by the first mentioned door sections, when said sections are in closed positions, a lever pivoted to the horizontally hinged door section and having arms for entering apertures in the lugs carried by the door sections and in a lug adjacent the door opening, said pivoted door sections being provided with flanges for engaging the outer edges of the door frame and for overlapping each other at their engaging edges and flanges carried by the horizontally hinged door sections for engaging the sides of the door sections.

1,347,284. SILO. JAMES R. MIMS, Luray, Va. Filed May 6, 1919. Serial No. 295,094. 4 Claims. (Cl. 20—1.4.)

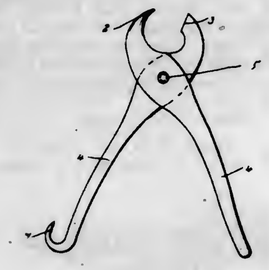


1. In a silo, vertical door posts recessed on their inner faces, and door sections similarly recessed to fit said door posts to provide a plurality of substantially parallel contact surfaces therebetween, the length of said door sections between said parallel contact surfaces being less than the distance between said posts at said points, whereby limited endwise movement is permitted to said door sections between said door posts.

1,347,285. LOCKING MEANS FOR ORTHODONTIA APPLIANCES. FREDERIC T. MURLLESS, Jr., Hartford, Conn. Filed Mar. 26, 1920. Serial No. 369,022. 4 Claims. (Cl. 32—19.)

1. Locking means for connecting an orthodontia anchor and arch which comprises a pocket with a hole through its side, formed on the wall of the anchor, a notched stud extending at an angle from the arch into said pocket, and a yielding finger projecting from the arch and having its ends extending through the hole in the pocket into the notch in the stud.

1,347,286. FRONT-AXLE RADIUS-ROD STRUCTURE. THOMAS H. JACOB, Wausau, Wis. Filed July 26, 1919. Serial No. 313,575. 1 Claim. (Cl. 267—66.)

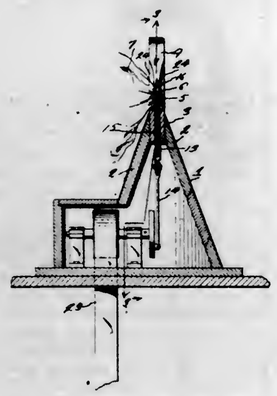


In a vehicle of the class described, the combination with an axle, bolts passed through the axle, sleeves carried by the upper ends of said bolts, and radius rods having their ends secured in said sleeves, nuts threaded on the lower ends of said bolts, sleeves carried by said nuts, and rod sections having their outer ends secured in said last named sleeves and having their inner portions inclined toward and secured to the portions of the radius rods adjacent and inwardly of the axle.

1,347,287. COTTER-PIN EXTRACTOR. ADOLPH NYHUS, La Crosse, Wis. Filed Dec. 24, 1919. Serial No. 347,073. 1 Claim. (Cl. 81—3.)

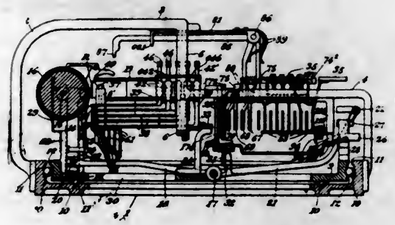
An extractor for cotter pins, comprising two crossed and pivoted shanks, one shank having a jaw provided

with a flat triangular face arranged radially of the pivot of the shanks with its base parallel to the said pivot,



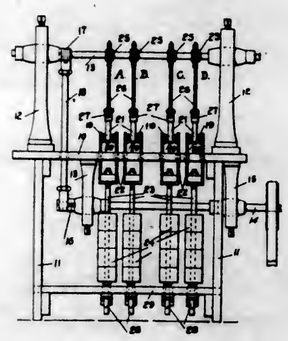
and the other shank having a curved and conical jaw the point of which is arranged opposite to the apex portion of the said triangular face.

1,347,288. FRUIT AND VEGETABLE PEELING ATTACHMENT. ADOLPH OLEVIN, Detroit, Mich. Filed June 27, 1919. Serial No. 307,081. 6 Claims. (Cl. 30—20.)



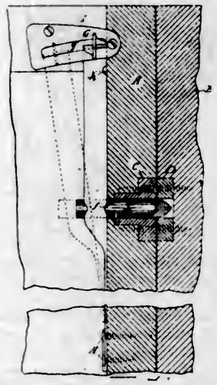
1. A device of the character described having a plurality of peeling blades, with means for securing the device upon a knife blade either transversely or longitudinally thereof, whereby any desired peeling blade can be brought into position for use.

1,347,289. BUTTON-CLIPPER. ARTHUR PARENT, Millers Falls, Mass. Filed Dec. 16, 1919. Serial No. 345,370. 3 Claims. (Cl. 218—27.)



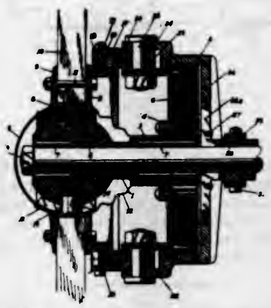
1. A button clipper comprising a base, said base being provided with an upstanding jaw at one of its edges, a horizontal guide adjacent said upstanding jaw, a spring actuated slidable jaw mounted on said horizontal guide and adapted to clamp a thread between the jaws, said jaws having recesses in their adjacent faces, one of said recesses merging into a knife guide, a vertically disposed reciprocating knife disposed in said guide and recesses and means for reciprocating said knife.

1,347,290. TYPEWRITING-MACHINE. EDWIN POPE, Quebec, Quebec, Canada. Filed Mar. 9, 1918. Serial No. 221,352. 15 Claims. (Cl. 197—11.)



1. The combination, in a typewriter embodying a platen adjustable laterally into a plurality of recording positions, and a key board, of a plurality of type keys, mechanism actuated by each type key and provided with a type member having a plurality of type characters thereupon, and a plurality of control elements and type positioning mechanism operated thereby associated with each type member and severally adapted to rotate the type member in opposite directions into operable positions relative to the platen, each control element being located adjacent to a plurality of type keys and being optionally operable coincidentally with each type key and by the same digit to vary the character printed by the operation of each type key.

1,347,291. TESTING-MACHINE. RAYMOND B. PRICE, New York, N. Y., assignor to Rubber Regenerating Company, a Corporation of Indiana. Filed Mar. 24, 1916. Serial No. 86,326. 9 Claims. (Cl. 265—1.)

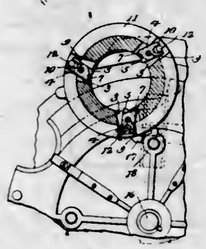


1. A flexing machine comprising an idler for forming a loop in the material to be flexed, a tension device operatively connected with the idler for tensioning the material, means for grasping the material on opposite sides of the loop thereof, and automatic continuously operating means for moving the first named means to cause the loop to move longitudinally of the tensioned material.

1,347,292. SNAP-LOCK FOR DOORS, GATES, AND THE LIKE. THOMAS GERSHOM PROPERT and WILLIAM REDWOOD BROWN, Chippendale, New South Wales, Australia, assignors of one-third to Albert Thomas Woolford, Chippendale, New South Wales, Australia. Filed Oct. 17, 1918. Serial No. 258,647. 2 Claims. (Cl. 292—173.)

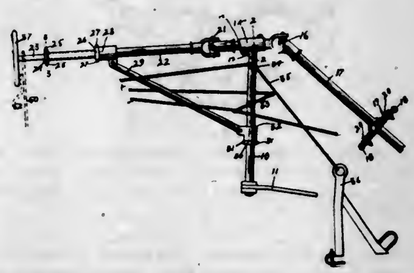
1. In snap locks for motor car doors, gates and the like, a guide plate, a bolt slidable within the guide plate, and a plate spring for actuating the bolt, one end of the bolt being cut away at one side to receive and loosely retain the plate spring thereon.

1,347,293. DRIVEN STEERING-WHEEL FOR VEHICLES. SAMUEL S. ROSE, San Jose, Calif., assignor of one-half to Wilfred H. Weller, San Jose, Calif. Filed Oct. 23, 1919. Serial No. 332,661. 4 Claims. (Cl. 74—103.)



1. A driven steering wheel for vehicles comprising a rigid axle, a driven ball turnably mounted thereon, and a hub carrying a wheel structure turnable with the ball and adapted for movement about the ball as an axis only in a plane longitudinally of the vehicle.

1,347,294. NUT-LOCKING DEVICE. WILLIAM H. SAWTELL, Worcester, Mass., assignor of one-half to Napoleon R. Thibert, Worcester, Mass. Filed Dec. 26, 1919. Serial No. 347,415. 5 Claims. (Cl. 151—30.)

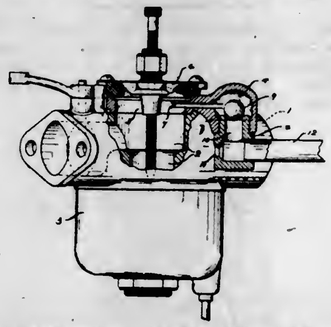


1. A nut locking device, comprising a resilient spring coil with its convolutions adapted to fit the screw threads of a bolt, with the end of the outer convolution bent at substantially a right angle to engage one of said screw threads, and with the end of the inner convolution hooked over the outer convolution back of its bent section.

1,347,295. STACK-HOLDER FOR CAN ENDS. MATHEW MEYER SEDWICK, Chicago, Ill., assignor to Continental Can Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Oct. 22, 1918. Serial No. 259,209. 4 Claims. (Cl. 113—114.)

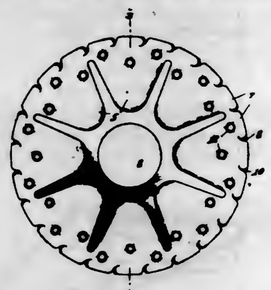
1. The combination of a stack holder for can ends and means for supporting and releasing the can ends including a series of pivoted supporting and releasing dogs, each having a lower supporting ledge and an upper tapered releasing and supporting finger spaced above said ledge a distance substantially equal to the thickness of a can end, said finger and ledge being staggered and disposed relative to each other and the stack holder so that when the said dogs are oscillated in one direction the ledges support the stack and when the dogs are oscillated in the other direction the fingers support the stack above the lowermost can end and the stack above the lowermost can end is continuously supported by said dogs.

1,347,296. EXTENSION STEERING DEVICE. EDWARD J. SELLA, Jewell, Iowa. Filed Jan. 13, 1920. Serial No. 351,181. 7 Claims. (Cl. 180—77.)



1. In a device of the class described; an upright support designed to be mounted on a tractor; a short shaft supported in substantially horizontal position for rotation on said upright support; means for operatively connecting one end of said short shaft with the steering shaft of a tractor; a shaft connected by a universal joint with said short shaft; a brace slidably mounted on said second shaft, to permit the second shaft to rotate; means for supporting said brace on said upright for permitting swinging movement of the brace with relation to the upright; and a steering wheel operatively connected with said second shaft.

1,347,297. CARBURETER ATTACHMENT. GEORGE F. SHIELDS, Los Angeles, Calif., assignor of one-fourth to Harold E. Shiner, one-fourth to James P. Berne, and one-fourth to Loyd E. Wright, Los Angeles, Calif. Filed June 24, 1919. Serial No. 306,470. 2 Claims. (Cl. 123—119.)

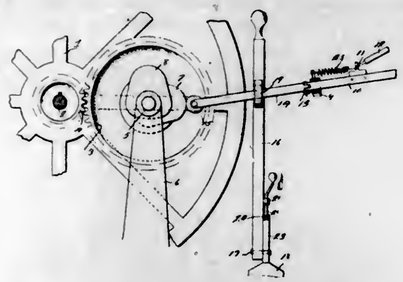


1. An attachment for carbureters comprising in combination with the main mixing chamber thereof, an an-

nulus arranged to fit upon the top of said mixing chamber, a cap for securing said annulus upon said chamber, said annulus formed with a chamber extended outside of and free of the mixing chamber and formed with a

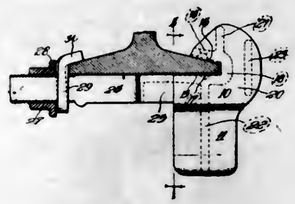
horizontal passageway connecting said mixing chamber with the chamber of said annulus, a fitting connecting with said last named chamber having an inlet, and a valve in said chamber.

1,347,298. RASPING-DISK. CLYDE L. SMITH and EMMETT S. WEBSTER, South Bend, Ind., assignors, by mesne assignments, to Smith One Heat System, South Bend, Ind., a Corporation of Indiana. Filed Aug. 1, 1919. Serial No. 314,677. 3 Claims. (Cl. 29—78.)



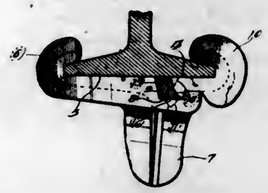
1. A circular rasping disk comprising a series of laterally projecting jagged-edged studs, and a series of edge teeth angularly disposed with relation to the plane of the disk.

1,347,299. RASPING-WHEEL. CLYDE L. SMITH and EMMETT S. WEBSTER, South Bend, Ind., assignors, by mesne assignments, to Smith One Heat System, South Bend, Ind., a Corporation of Indiana. Filed Aug. 1, 1919. Serial No. 314,678. 3 Claims. (Cl. 29—78.)



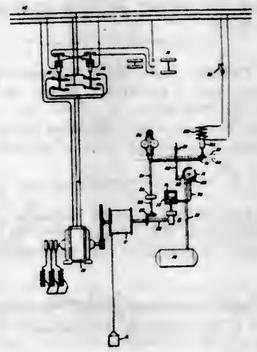
1. A rasping wheel comprising a series of blunt-ended pins extending from the face thereof, the meeting point of the blunt end and sides of a pin forming a cutting edge coextensive with the marginal dimensions of such pin end.

1,347,300. VALVE-CONTROL MECHANISM. EARL G. SMITH, Crandon, Wis. Filed Sept. 19, 1919. Serial No. 324,746. 3 Claims. (Cl. 123—41.)



1. A reversing mechanism for internal combustion engines comprising an exhaust control rod and an ignition control rod, a pair of cams operated by the crank shaft, one of said cams being adapted to operate the valve and ignition control rods for turning the engine to the right, the other cam being adapted to operate the exhaust valve control rod and the ignition control rod so as to operate the engine to the left and means whereby the operating valve rod may be shifted from one cam to the other.

1,347,301. RAIL-ANCHOR. ARTHUR L. STANFORD, Chicago, Ill. Filed Mar. 1, 1920. Serial No. 362,474. 14 Claims. (Cl. 238—329.)



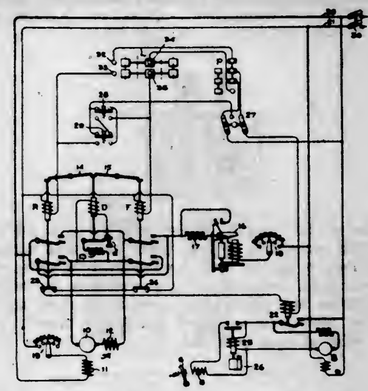
1. In a rail anchor, a rail gripping member provided with jaws adapted to embrace the flange of a rail, a cross connecting member, a split ring clip having fingers adapted to overlie the opposite edge of the rail base, and means bearing against the outer face of the split ring clip, substantially as described.

1,347,302. RAIL-ANCHOR. ARTHUR L. STANFORD, Chicago, Ill. Filed Apr. 30, 1920. Serial No. 377,805. 7 Claims. (Cl. 238—325.)

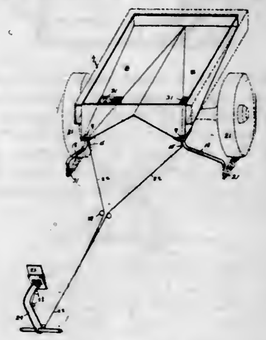
1. In a rail anchor, the combination of a plurality of members in interlocked relation, and a granular substance having a high co-efficient of friction interposed between the inter-engaging surfaces to prevent displacement, substantially as described.

1,347,303. ELECTRIC HOIST. FRED L. STONE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 26, 1919. Serial No. 320,006. 8 Claims. (Cl. 188—82.)

1. The combination with an electric hoist or the like and a brake for the same, of means for automatically applying the brake on failure of power, and means for delaying the application of the brake until the speed of the hoist has decreased to a predetermined value.



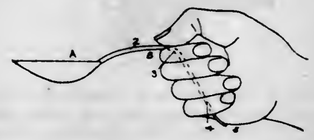
1,347,304. PIPE-CLEANER. CHARLES M. TALLMAN, Delavan, Wis. Filed June 17, 1919. Serial No. 304,857. 3 Claims. (Cl. 131—13.)



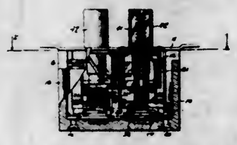
1. A pipe cleaner and cylindrical case therefor comprising a pipe cleaning probe, said probe having a handle member at one end thereof, said handle member being adapted to be disposed in one end of the cylindrical casing, said cylindrical casing being divided longitudinally into compartments, one of said compartments being adapted to receive the pipe probe and the other compartment cleaning material.

1,347,305. MOTOR CONTROL. WILLIAM G. TAYLOR, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 29, 1917. Serial No. 171,774. 4 Claims. (Cl. 172—239.)

1. The combination with a machine having an intermittently operated mechanism, of an electric motor for operating the same, a second intermittently operated mechanism coöperating with the first mechanism, an electric motor for driving the same, a mechanical stop for accurately stopping the second mechanism after a predetermined travel, a switch operated by each motor for controlling the other motor, and connections whereby the motors are operated in succession.

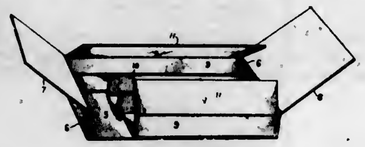


1,347,306. AUTOMOBILE-SANDER. ADOLPH TEUSCHER and OTTO TEUSCHER, Hillsdale, Oreg. Filed Mar. 10, 1920. Serial No. 364,658. 2 Claims. (Cl. 291—28.)



1. In a device for preventing the skidding of automobile wheels, the combination of a sand containing receptacle, delivery tubes adapted to carry the sand from said receptacle to the wheel track, butterfly valves within said delivery tubes, spring return cables adapted to operate said butterfly valves, and a toe operated pedal mounted on the brake pedal adapted to actuate said cables.

1,347,307. CHILD'S TABLE UTENSIL. EDWARD G. THOMAS, Toledo, Ohio. Filed Dec. 10, 1918. Serial No. 266,118. 4 Claims. (Cl. 30—22.)



1. A child's table utensil including a handle, said handle having a neck and a forefinger-engaging portion and palm-registering portion, arranged at an angle thereto and adapted to contact with the ulnar side of the palm.

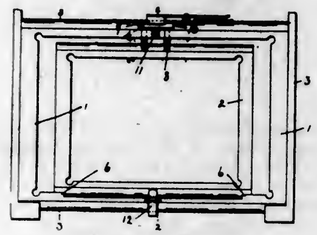
1,347,308. ELECTRIC SWITCH. GEORGE B. THOMAS, Bridgeport, Conn., assignor to The Perkins Electric Switch Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Jan. 15, 1916. Serial No. 72,324. 5 Claims. (Cl. 200—64.)

1. An electric switch device, comprising a cup-shaped insulating receptacle, a yoke piece extending across the top thereof, a pair of switches mounted in series within the receptacle, independent push buttons for actuating the switches, and guide pins extending at right angles to the yoke piece and arranged lengthwise thereof on opposite sides of each push button.

1,347,309. PAPER RECEPTACLE. JOHN W. UPP, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 12, 1919. Serial No. 282,188. 4 Claims. (Cl. 229—23.)

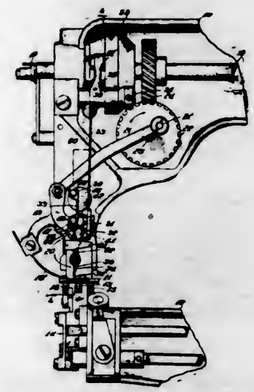
1. In a receptacle, a main blank scored to form bottom, end, and top sections, and a plurality of blanks scored longitudinally to form a plurality of channel shaped side and partition members, the former being placed along the side edges of the bottom section with the channels facing inward, and the latter being placed on the bottom section between the side members with the channel facing upward.

1,347,310. ANIMAL-EXTERMINATOR. JAMES WRIGHT VAN METER, Buenos Aires, Argentina. Filed July 23, 1915. Serial No. 41,591. Renewed Nov. 28, 1917. Serial No. 204,454. 1 Claim. (Cl. 43—81.)



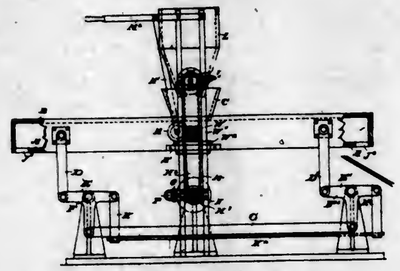
A device of the class described comprising a frame having a back and sides, a transverse rod connected to the sides, a spring controlled striker pivoted on the rod between the sides, a trigger arranged against the outer face of the back and having its upper end extending forwardly through the back and pivotally connected thereto, said upper end of the trigger normally engaging the striker to hold it in set position, a W-shaped bait holder pivoted on the sides, and projecting through the back for engagement with the trigger to hold it in contact with the striker, said bait holder being adapted to be actuated by an animal to release the trigger and free the striker, and a liquid containing breakable tube mounted in the frame in the path of the striker and adapted to be broken thereby when the striker is freed from the trigger to release the liquid.

1,347,311. PAINT. GROVER C. WATSON, Mineral Wells, Tex. Filed Oct. 13, 1919. Serial No. 330,378. 3 Claims. (Cl. 134—51.)



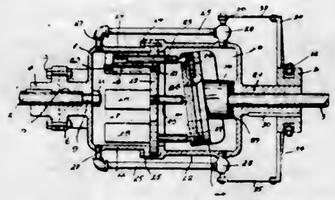
1. A paint for industrial purposes composed of crude oil or petroleum, gloss oil, and a mineral for making paints.

1,347,312. PRINTING-PRESS CHASE. CLARENCE H. WEANT, Baltimore, Md. Filed Oct. 14, 1919. Serial No. 330,628. 3 Claims. (Cl. 101—391.)



1. The combination of a printing press chase having ears on the inner edge thereof provided with recesses, a smaller chase adapted to fit within the said first named chase and resting in said recesses, two pins projecting through the first named chase and having beveled lower edges adapted to impinge against the beveled edge of the smaller chase and lock it in the first named chase, and a spring to release said pins when the first named chase is removed.

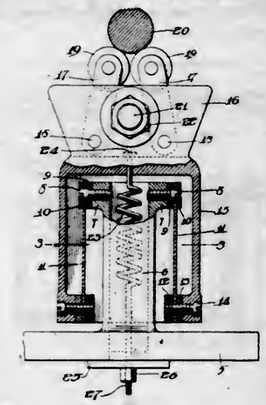
1,347,313. SEWING-MACHINE LOOPER. JAMES WHITELAW, St. Louis, Mo., and GEORGE T. MAY, Jr., Chicago, Ill. Filed Apr. 17, 1919. Serial No. 290,763. 11 Claims. (Cl. 112—176.)



1. The combination with a laterally reciprocating needle and means for presenting work thereto, of a looper comprising a movable unit having a looper-point, and means for moving said unit through a six-way path without changing the angle of said unit with respect to the plane of the work.

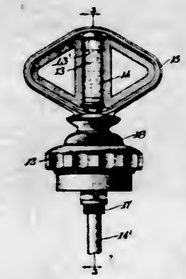
1,347,314. SEPARATING OR GRADING APPARATUS. THOMAS FEWSTER WILKINSON, Manchester, England, assignor of one-half to Herbert Tatlock Wilkinson, Manchester, England. Filed June 2, 1914. Serial No. 842,535. 4 Claims. (Cl. 130—17.)

1. A grading, separating or like appliance comprising a horizontal table, a bracket secured to the underside at about the middle of said table, a crank adapted to impart continuous, uninterrupted and complete circular motion in a vertical plane to said table and situated below the said bracket, the pin of the said crank being journaled in said bracket, and links so arranged that circular motion in a vertical plane is given to the table while it always retains a horizontal position, substantially as and for the purpose described.



1,347,315. POWER-TRANSMISSION MECHANISM. ROMEO L. WILLIAMSON, Mount Vernon, Ohio. Filed Apr. 1, 1918. Serial No. 225,870. 8 Claims. (Cl. 192—18.)

1. In a transmission mechanism of the character described, the combination with a driving and a driven shaft, of means for forming a driving connection between said shafts comprising a casing member rigidly carried by the driving shaft, said casing member being divided into high and low pressure compartments, a plurality of cylinders in said casing operatively located between said high and low pressure compartments and disposed in an array around said driving shaft to be parallel therewith, pistons movable in said cylinders, valve mechanism governing the flow of liquid through said cylinders from the low to the high pressure compartment, means for controlling the rate of flow of liquid from the high to the low pressure compartment and means associated with the driven shaft for coöperation with said pistons and arranged to successively move them into their respective cylinders upon a relative rotative movement between said shafts.

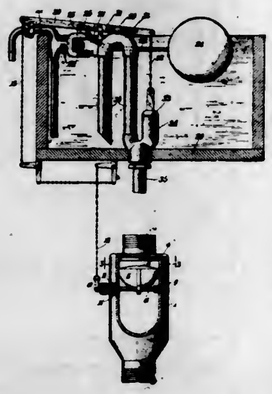


1,347,316. SHAFT-SUPPORT FOR TESTING PURPOSES. NICHOLAS W. AKIMOFF, Philadelphia, Pa., assignor to Vibration Specialty Company, a Corporation of Delaware. Filed July 18, 1917. Serial No. 181,228. 6 Claims. (Cl. 73—51.)

1. In a device of the character described for supporting a rotatable shaft against vertical movement while permitting the same to oscillate laterally without damping, the combination of a stationary support, plate springs depending downwardly from a portion of said stationary support, and a vibratory housing element secured

to the lower free ends of said plate springs and surrounding the same and carrying means for journaling the rotatable shaft.

1,347,317. TEMPERATURE-INDICATING DEVICE FOR COOLING SYSTEMS FOR INTERNAL-COMBUSTION ENGINES. LOUIS V. ARONSON, Newark, N. J. Filed Oct. 17, 1916. Serial No. 126,196. 3 Claims. (Cl. 116—114.)



1. A heat responsive element for insertion through an automobile radiator cap, and consisting of a compound tubular member containing a heat responsive liquid capable of automatically changing its normal color to an abnormal one simultaneously when the normal conditions of the engine become abnormal, the said member having a transparent indicator portion for said liquid projecting above the radiator cap and a continuation thereof of flexible material.

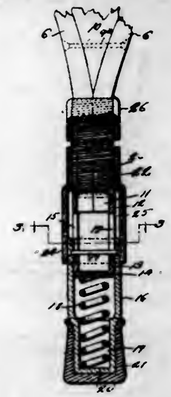
2. A heat responsive element for insertion through an automobile radiator cap, and consisting of a compound tubular member containing a heat responsive liquid capable of automatically changing its normal color to an abnormal one simultaneously when the normal conditions of the engine become abnormal, the said member having a glass indicator portion for said liquid projecting above the radiator cap and a continuation thereof of flexible material.

3. A heat responsive element for insertion through an automobile radiator cap, and consisting of a compound tubular member containing a heat responsive liquid capable of automatically changing its normal color to an abnormal one simultaneously when the normal conditions of the engine become abnormal, the said member having a transparent rigid indicator portion for said liquid

projecting above the radiator cap and a continuation thereof adapted to be bent into position to bring its outer end into direct contact with the fluid issuing from the radiator return pipe, and means secured to the other end whereby the said heat responsive element may be attached to the radiator cap.

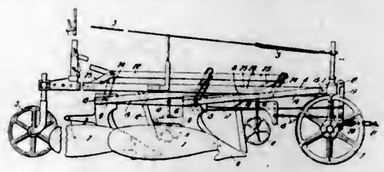
1,347,318. FLUSHING DEVICE. GEORGE P. BENDER, New York, N. Y. Filed June 21, 1916. Serial No. 104,856. 30 Claims. (Cl. 4—5.)

1. In a flushing device, a receptacle, and means to flush said receptacle automatically when a predetermined weight is contained in said receptacle comprising a tank, an inlet valve, a float, connections between said float and said inlet valve, a lever mounted on said connections, an outlet valve, and connections between said lever and said outlet valve.



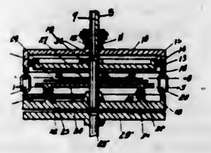
1,347,319. LENS. LUCIAN W. BUGBEE, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Dec. 13, 1916. Serial No. 136,686. 5 Claims. (Cl. 88—54.)

1. An ophthalmic lens, comprising a plurality of parts adapted to be joined one to the other, said parts having polished contacting surfaces, and an adhesive interposed between said parts and comprising a powdered transparent mineral matter and a gum which is transparent in a thin film.



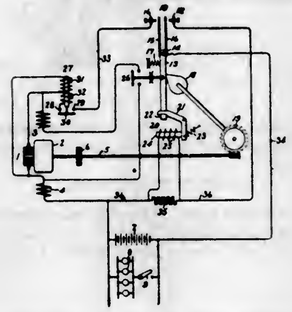
1,347,320. CRUTCH AND CUSHION-TIP THEREFOR. MOSE BRUYERE, Green Bay, Wis. Filed Feb. 17, 1920. Serial No. 359,286. 2 Claims. (Cl. 135—53.)

1. The combination with a crutch having a cylindrical sleeve disposed on its lower end, of a slidable sleeve slidably mounted on the crutch carrying sleeve, slidable connections between the crutch carrying sleeve and the slidable sleeve for preventing rotation of said slidable sleeve and limiting the same in its upward and downward movement, the lower end of the crutch carrying sleeve being closed, the lower end of the slidable sleeve being closed, a spring disposed between said closed ends for normally holding the slidable sleeve extended, and a sleeve



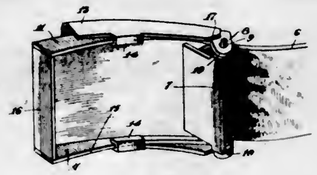
carried by the crutch carrying sleeve and provided with an enlarged portion telescopically engaging over the upper end of the slidable sleeve.

1,347,321. AGRICULTURAL PLOW. EDWARD CORNELL CALEY and CHARLES CREASEY WRAY, Burton Pidsea, near Kingston-upon-Hull, England. Filed Mar. 4, 1920. Serial No. 363,162. 2 Claims. (Cl. 97—36.)



1. The combination, with a wheeled frame, of plows provided with substantially horizontal plow beams, gage wheels supported from the plow beams in front of the plows, downwardly and rearwardly inclined bars having their front ends pivoted to the front end portion of the frame by horizontal pivots and having their rear end portions pivotally connected with the rear end parts of the plow beams, a clevis pivoted on a horizontal axis at the front end portion of the said frame and provided with a draft connection, and links extending longitudinally under the front end pivots of the said bars and connecting the front end portions of the plow beams with the said clevis.

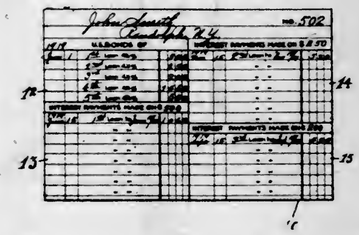
1,347,322. FLUID-CONTROLLED CLUTCH MECHANISM. FRANK M. CAMPBELL, Seattle, Wash. Filed Apr. 15, 1918. Serial No. 228,576. 3 Claims. (Cl. 192—18.)



1. A clutch device for actuating air compressors comprising a driven disk mounted to turn with the compressor actuating shaft and movable axially thereof, a driving disk facing thereto, a piston fixed to the compressor actuating shaft, a cylinder for said piston movable on the same shaft, members connecting said driven disk with said cylinder, and independent means acting to yieldingly force said driven member against said driving member.

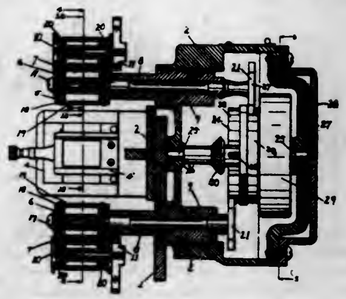
1,347,323. AUTOMATIC BATTERY-CHARGING SYSTEM. FRANK E. CASE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 14, 1918. Serial No. 266,795. 8 Claims. (Cl. 171—314.)

5. In combination a variable speed generator, driving means therefor, a storage battery, a testing circuit, switching means for connecting said source and battery and connecting said battery and testing circuit, means rotated by said driving means for actuating said switching means, and means responsive to the current in said testing circuit for controlling the actuation of said switching means to connect said source and battery.



1,347,324. BELT-BUCKLE. LEHMAN H. CRANDALL, Los Angeles, Calif. Filed Oct. 6, 1919. Serial No. 328,671. 4 Claims. (Cl. 24—194.)

1. In a belt buckle, a curved fixed gripping member, a curved fixed gripping member, a curved slidable gripping member having a face plate normally spaced from the fixed member thereon, said face plate formed with a less curvature than that of the fixed gripping member, and means whereby advancing said slidable gripping member longitudinally on said fixed gripping member will operate to move the face plate toward the fixed member to grip a belt interposed between said members.

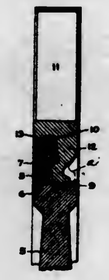


1,347,325. DEVICE FOR TABULATING BONDS AND OTHER SECURITIES. JEROME A. CROWLEY, Randolph, N. Y. Filed Nov. 28, 1919. Serial No. 340,981. 1 Claim. (Cl. 283—57.)

A bank tabulating device for bonds and the like including a depositor's pass book having designated spaces to receive a list constituting acknowledgments by the bank of receipts from the depositor of bonds of the different issues and of the interest borne by each issue, and having a series of divisions one for each of the different bonds so listed, each division having a designated space to receive the amount of the bond and having a series of designated spaces to receive a record of the interest collected by the bank and placed to the credit of the depositor as of the date collected by the bank, and a card for retention by the bank having designated spaces to receive a record list of the different bond issues held by the bank to the credit of the depositor and having a series of divisions one for

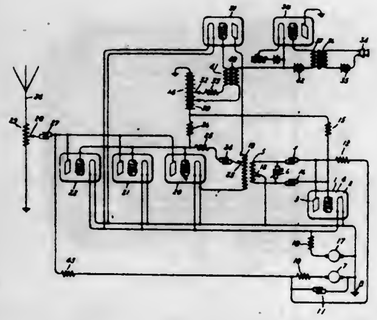
each of the different bond issues so listed, each of the last named divisions having designated spaces to receive the amount of the bond and further having a series of designated spaces to receive a record of the interest collected by the bank and held thereby to the credit of the depositor as of the date collected by the bank.

1,347,326. MOTION-PICTURE APPARATUS. RALPH P. DE VAULT, Battle Creek, Mich. Filed Aug. 8, 1918. Serial No. 248,851. 4 Claims. (Cl. 88—18.3.)



1. In a motion picture apparatus of the class comprising an intermittently driven film and an aperture gate, the combination of a pair of film sprockets disposed one at each side of the gate, feed rollers disposed at the outer sides of the film sprockets to hold the films thereto, guide rollers disposed to engage the film as it passes from the first sprocket and to the second whereby the film is held to the film sprockets and guided to the gate, the film being free from braking friction between said film sprockets, spindles for said film sprockets, star wheels on said spindles provided with slots having outwardly diverging surfaces at the entrance thereof and concave locking surfaces between the slots, and a driving wheel disposed between said star wheels and provided with a pair of oppositely disposed and oppositely projecting pins coacting with said star wheel slots and with recessed cylindrical locking cams on the sides thereof, arranged so that the pins travel over the diverging said surfaces of the slots while the locking cams are in locking engagement with the star wheels.

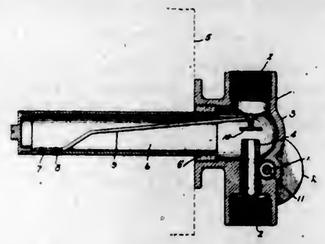
1,347,327. ELASTIC-FLUID TURBINE. EDGAR D. DICKINSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 15, 1920. Serial No. 351,576. 3 Claims. (Cl. 253—77.)



1. In an elastic fluid turbine, the combination of a rotor having a rim provided with a recess in its surface,

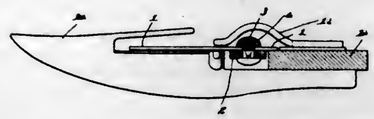
an annular flange projecting from such surface, said flange having a recess in the side adjacent to said first named recess, a bucket having a part which hooks over the edge

of said flange, and a leg which engages in said recesses, the end of said leg being driven into said recess in the rim after the bucket is in position.



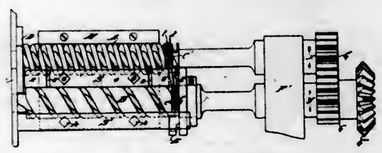
1,347,328. RADIOSIGNALING SYSTEM. ALFRED N. GOLDSMITH, New York, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 29, 1917. Serial No. 158,218. 12 Claims. (Cl. 250—6.)

4. The combination in a radio signaling system of a pliotron oscillator having a resonant circuit associated therewith and so arranged that radio frequency oscillations will be produced in an inductance included in said resonant circuit, a second inductance coupled to the first mentioned inductance and connected in the grid circuits of a plurality of pliotron amplifiers connected in parallel, a pliotron modulator having its cathode and anode connected to said second inductance, means for applying to the cathode and anode of said modulator a different voltage than that applied to the grid circuits of the amplifiers and means for varying the grid potential of said modulator in accordance with variations in a signaling current.



1,347,329. THERMOSTATIC REGULATOR. CHESTER I. HALL, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Mar. 31, 1919. Serial No. 286,438. 3 Claims. (Cl. 236—33.)

1. A thermostatically controlled valve comprising a pipe coupling, a casing secured thereto and thermally insulated therefrom forming a closed chamber communicating with the coupling, a thermostatic element extending to the coupling and having one end secured to the casing, a self-aliining valve mounted on the other end of



said thermostatic element within the coupling and a valve seat coöperating with the valve to control the passage of fluid.

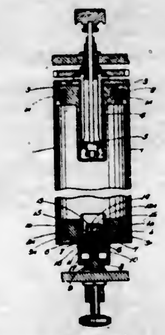
1,347,330. CUTTER-BAR. LOUIS N. HATHAWAY, MOSES W. TWOMBLY, and ELMER H. HAMMOND, Laconia, N. H. Filed May 8, 1920. Serial No. 379,794. 5 Claims. (Cl. 56—300.)

3. In a cutter bar, the combination of a series of cutter blades, having mutually registering marginal recesses to form bolt-holes, a back strip on which the blade sections are carried, provided with bolt holes recessed longitudinally of the back strip, bolts having lateral extensions to engage the recessed bolt holes, passing through the back strip and said bolt holes, elongated nuts, and projections on the blade sections to engage said nuts.

1,347,331. ADJUSTABLE SADDLE FOR GILL-DRAWING FRAMES. WILLIE HOLDSWORTH, Providence, R. I. Filed June 9, 1919. Serial No. 302,954. 13 Claims. (Cl. 19—6.)

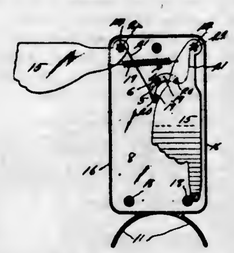
12. In a gill-drawing frame, the combination with the gill-screws and faller-bars operated therefrom, of a fixed support, opposite extensible saddle-sections mounted on said support, means for holding said saddle-sections in alinement, and means for clamping the sections against the support, said clamping means being releasable to allow for longitudinal adjustment of the saddle-sections.

1,347,332. METHOD OF AND APPARATUS FOR DRIVING TUNNELS FOR MILITARY OR OTHER PURPOSES IN EARTH OR SOFT ROCK. AUSTIN HOPKINSON, Guide Bridge, England. Filed Aug. 6, 1917. Serial No. 184,722. 14 Claims. (Cl. 61—86.)



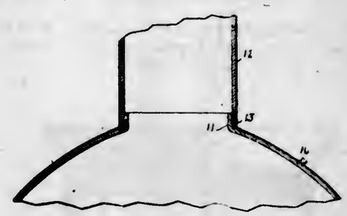
1. An excavator for tunneling, comprising, in combination, a cutter, means for operating the cutter in any

plane, a shaft carrying the cutter, supports for the shaft, and a guide frame in advance of said supports limiting



the positions of the cutter and similar in outline to the cross-section of the tunnel to be driven.

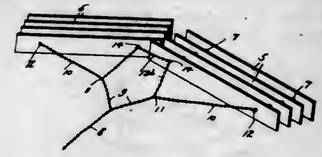
1,347,333. TYPEWRITING-MACHINE. CONSTANCE MABEL MEREDITH HOUSTON, Papanui, Christchurch, New Zealand. Filed Feb. 10, 1919. Serial No. 276,143. 4 Claims. (Cl. 197—147.)



2. In typewriting machines, a cylindrical platen, disk members closing the ends of said cylinder, non-conducting material interposed between the ends of said cylinder and said disk members and means connected to one of said end disk members to create a partial vacuum within said cylinder.

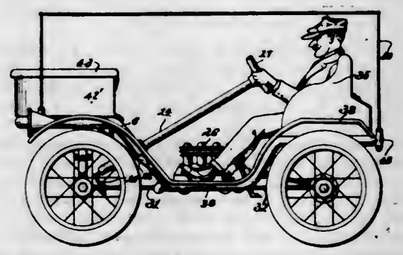
1,347,334. DIRECTION-INDICATOR FOR BICYCLES. EDMISTON P. JOHNSON, Decatur, Ill. Filed Apr. 6, 1920. Serial No. 371,709. 1 Claim. (Cl. 116—36.)

The combination with a bicycle, of a direction indicator therefor, said direction indicator comprsing a casing adapted to be secured to the mud guard of the rear wheel, indicator arms having their upper ends pivoted in the upper end of the casing at each side thereof, a spring connected to the indicator arms at points below their pivotal points, limiting stops for limiting the inward movement of the arms, a rockable operating shaft disposed in the casing at a point between the indicator arms, said rockable shaft being provided with outwardly extending arms, drums carried by the indicator arms at their pivotal points, flexible connections between the operating rod arms and the drums whereby said drums may be rotated as either arm is moved downwardly and means for operating the rotatable operating shaft from adjacent the handle bars of the bicycle.



1,347,335. METAL REFLECTOR AND METHOD OF MAKING THE SAME. FRANK E. JONES, Sebring, Ohio, assignor to General Electric Company, a Corporation of New York. Filed Apr. 19, 1918. Serial No. 229,541. 4 Claims. (Cl. 113—112.)

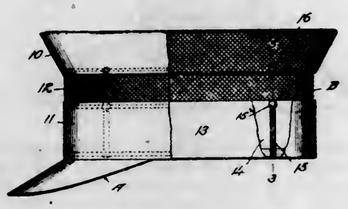
1. The method of making metal reflectors which consists in separately forming a bowl portion with a shoulder surrounding an aperture therein and a heel portion with an end to fit against said shoulder and then welding said end to said shoulder.



4. A metal reflector comprising a bowl portion and a comparatively long heel portion, said bowl portion having an aperture in its top surrounded by a shoulder and said heel portion being welded at its lower end to the outside of said shoulder and to the adjacent part of the bowl portion so as to form a smooth junction therewith.

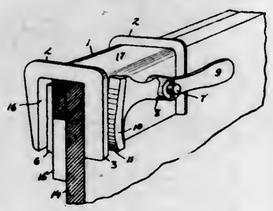
1,347,336. ROAD-DRAG. JOHN C. KARR, Chicago, Ill. Filed Jan. 6, 1919. Serial No. 269,867. 1 Claim. (Cl. 37—5.)

A road scraper comprising a pair of drag units, a flexible connection between the units for holding the same in laterally spaced relation, a draft chain connected to each unit, one end of said chain being detachably connected to the unit near its outer end and the other end of the chain near the inner end of the unit, a hauling chain having diverging branches connected respectively to the draft chains intermediate the ends of the latter, and means on the rear of the units for connection of the draft chains to permit reversal of the units.



1,347,337. AUTO-CHASSIS. GEORGE L. KLINE, St. Louis, Mo. Filed Aug. 9, 1919. Serial No. 316,316. 5 Claims. (Cl. 180—1.)

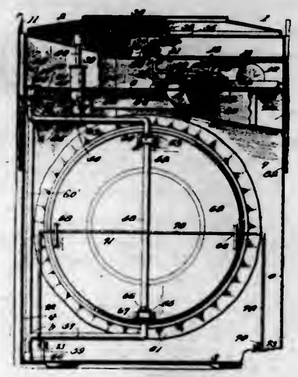
1. An automobile chassis comprising tubular side members provided with downwardly and inwardly bent por-



tions forming a support for a motor, transverse members connected to said side portions at the front and rear and forming with said side portions a horizontal support for the rear seat and a horizontal support for a container or front seat.

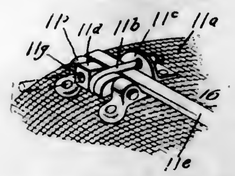
1,347,338. CONVERTIBLE HAT. THOMAS S. KNOTTS, Little Rock, Ark. Filed July 28, 1919. Serial No. 313,688. 2 Claims. (Cl. 2—114.)

2. In a hat, a crown portion having openings in the side thereof, a shutter movable longitudinally with respect to the crown to cover and uncover said openings, elastic elements secured to the crown and shutter for holding said shutter normally out of covering relation to the openings, and coöperating fastening devices on the shutter and crown for positively and detachably holding the shutter in covering relation to said openings against the influence of said elastic members.



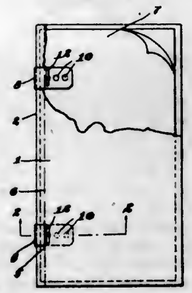
1,347,339. ANCHOR-ROPE FASTENER. SAMUEL L. KUNTZ, Fort Wayne, Ind. Filed Apr. 26, 1920. Serial No. 376,453. 1 Claim. (Cl. 114—199.)

In a device of the class described for a boat, a U-shaped base forming a shield for the upper edge of the boat and having a laterally projecting jaw; a securing means in connection with one side of the base for clamping the side of the boat against the opposite side of the shield; and an operating lever pivotally supported in connection with one side of the shield and extending parallel therewith, and having a cam shaped jaw for clamping a rope against the jaw on the shield.



1,347,340. GAS-METER. GEORGE A. LANE, Chicago, Ill., assignor to American Meter Company, Incorporated, New York, N. Y., a Corporation of Delaware. Filed Jan. 9, 1919. Serial No. 270,301. 8 Claims. (Cl. 73—1.)

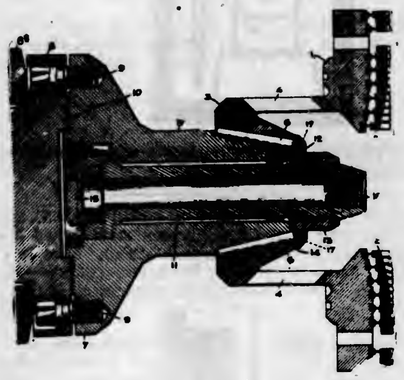
1. In a gas meter, in combination, a meter casing, having diaphragm compartments therein, a valve table, valves on said table, a double diaphragm in each compartment, a flagstaff in each compartment formed in two sections out of alinement with each other, and connections between the two sections whereby the oscillation of one section will communicate similar movement to the other, an operating shaft, connections between the operating shaft and one of the flagstaff sections, whereby a rotary motion is given the shaft upon the expansion and collapse of the diaphragms, and connections between the



operating shaft and the valves, whereby the flow of gas into and out of the diaphragms and their compartments is controlled.

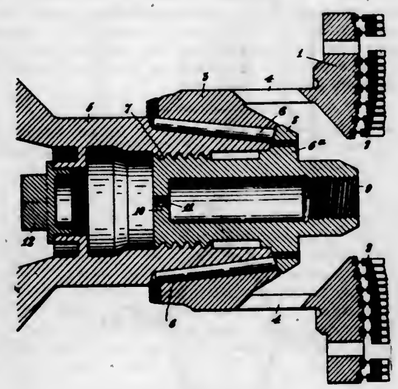
1,347,341. DETACHABLE FASTENER FOR CYLINDRICAL SCREENS. WILLIAM LOGAN LEACH, Brownwood, Tex. Filed Apr. 10, 1917. Serial No. 160,983. 1 Claim. (Cl. 292—98.)

In an apparatus of the character described, a clamping connection for relatively movable parts including a bracket carried by one of said parts, a pair of laterally spaced bearing members carried by the other of said parts, a shaft having its ends journaled in the said bearing members and having an eccentric portion and a tool receiving socket between the bearing members, and a bolt one end of which is loosely adjustably mounted through the bracket and the opposite end of which has a hook detachably engaging the eccentric portion of the said shaft as and for the purpose set forth.



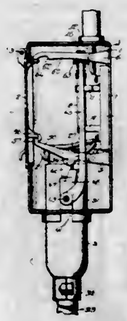
1,347,342. LOOSE-LEAF BINDER. LEO R. LEWIS, Somerville, Mass. Filed Oct. 30, 1919. Serial No. 334,410. 10 Claims. (Cl. 129—19.)

1. A loose-leaf binder having a pair of slots in the region of its binding edge, and a strap of flat, flexible



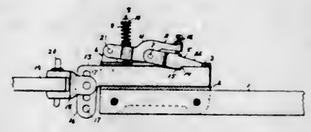
material extending over the outside of the binder between the slots with its free ends extending through said slots to the inside of the binder.

1,347,343. MEANS FOR SECURING TURBINE-ROTORS TO THEIR SHAFTS. BIRGER LJUNGSTRÖM, Stockholm, Sweden, assignor to Aktiebolaget Ljungströms Angturbin, a Corporation of Sweden. Filed Mar. 25, 1919. Serial No. 285,032. 6 Claims. (Cl. 253—39.)



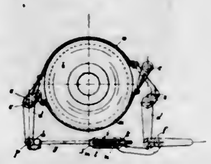
1. In a turbine, the combination of a rotor, a hollow shaft having a tapered end to which the rotor is keyed, a tension member which is carried by the shaft, and means mounted on the member for holding the rotor on the shaft and said member under tension.

1,347,344. MEANS FOR SECURING TURBINE-ROTORS TO THEIR SHAFTS. FREDRIK LJUNGSTRÖM, Brevik, Lidingön, Sweden, assignor to Aktiebolaget Ljungströms Angturbin, Stockholm, Sweden, a Corporation. Filed Apr. 15, 1919. Serial No. 290,355. 2 Claims. (Cl. 253—39.)



1. In a turbine, the combination of a rotor, a hollow shaft having a tapered end to which the rotor is keyed, and a hollow tension member having a fixed flange on its inner end which engages said rotor, the outer end of said member being connected to said rotor for putting such member under tension.

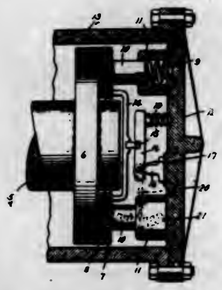
1,347,345. COMBINATION SAFETY SWITCH AND RECEPTACLE. JOHN LOFGREN, Chicago, Ill., assignor to Ralco Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 26, 1918. Serial No. 268,311. 9 Claims. (Cl. 200—50.)



2. In a device of the class described, the combination of a switch box, a door for closing it, a receptacle carried by the box, a plug for the receptacle, and locking means for holding the door closed, said locking means being held by the plug in acting position when the plug is in position within the receptacle, whereby the door cannot be opened without first withdrawing the plug.

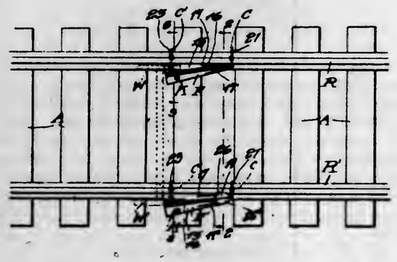
1,347,346. SAFETY TRACTOR-HITCH. DAVID F. LONDT, Columbia City, Ind. Filed June 6, 1919. Serial No. 302,337. 1 Claim. (Cl. 213—67.)

In a hitch for connecting a tractor and plow, a socket on the plow-beam; a draw-bar extending removably into the socket; a pair of toggles pivoted together, one having pivotal support on the socket and the other locking engagement with the draw-bar; a spring for holding the toggles in locking position; and adjustable means in connection with one of the toggles and having bearing relation with the other to limit the relative movement thereof.



1,347,347. BRAKE. EDWARD D. MACKINTOSH, Brooklyn, N. Y., assignor to S. S. Hepworth Company, New York, N. Y., a Corporation of New York, and Edith M. Mackintosh, Brooklyn, N. Y. Filed July 24, 1918. Serial No. 246,600. 2 Claims. (Cl. 188—77.)

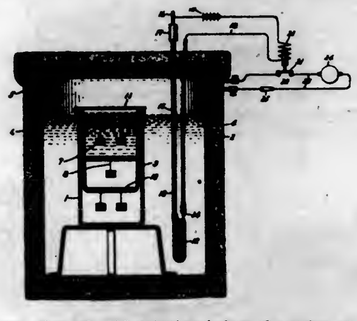
1. A brake drum, two bands secured, at one end of each, to two anchorages at diametrically opposite sides of the drum and bearing on the cylindrical face thereof, two levers pivoted and secured to the other ends of the bands,



and an elastic toggle, including a coil spring under compression, connecting the two levers and forcing the bands against the drum by swinging the levers on their fulcrums.

1,347,348. THRUST-MEASURING INSTRUMENT. CAMPBELL MACMILLAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 14, 1919. Serial No. 277,073. 2 Claims. (Cl. 265—68.)

1. The combination with a continuously rotating shaft which is subjected to axial thrust, of a thrust collar on the shaft, an annular thrust plate which engages said collar, a casing, a head fixed to an end of said casing, spring means located between said head and thrust plate and directly engaging the thrust plate to hold it against said thrust collar and take the thrust of the shaft, and means for indicating axial movements of the shaft and thrust plate.

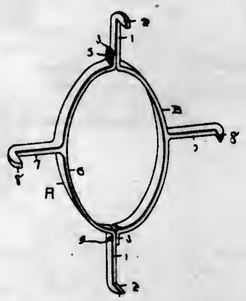


1,347,349. CAR-REPLACING DEVICE. WILLIAM MATNEY, Stacy, Va. Filed Nov. 3, 1919. Serial No. 335,251. 4 Claims. (Cl. 104—269.)

1. A car replacing device comprising a pair of frog members, each member comprising a tapered body having an inclined upper face, a rib formed centrally of said face and having inclined side walls, said body having the side walls thereof formed with recessed portions to provide shoulders which are adapted to engage the under side of the head of a rail, a depending flange formed on the under side of said body and extending longitudinally thereof, said flange having inclined sides and tapering in width, chains secured to the under side of said body portion, and hooks carried by said chains which are adapted to engage the base of a rail.

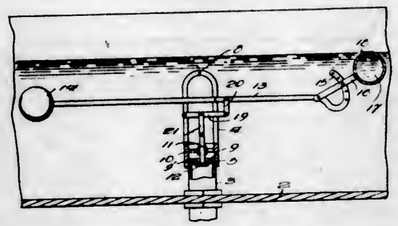
1,347,350. CRYSTAL PRODUCTION. ROY W. MOORE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 26, 1918. Serial No. 219,312. 8 Claims. (Cl. 23—13.)

1. The method of producing crystals which consist in producing supersaturation in a solution of the material to be crystallized, maintaining said solution supersaturated when crystallization has begun but holding the degree of



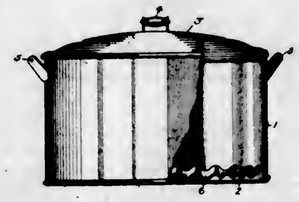
supersaturation of said solution below the point at which irregular crystallization occurs.

1,347,351. PACKING DEVICE FOR PISTONS, RAMS, RODS, AND THE LIKE. ANGUS MURRAY and ANGUS ROBERTSON MURRAY, Glasgow, Scotland. Filed July 29, 1919. Serial No. 314,175. 4 Claims. (Cl. 286—33.)



1. In a packing device for pistons, rams, rods and the like, a number of conoidal rings of a malleable or deformable metal or alloy, the ring being of radial width greater than its thickness, a joint forming lip on the ring and means for so supporting the ring that its lip is free to act under pressure as a strut or buttress against the surface where joint is to be made.

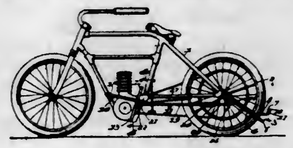
1,347,352. HOG-YOKE. TILLMAN D. RICKS, Lyons, Ga. Filed Oct. 16, 1919. Serial No. 331,142. 1 Claim. (Cl. 119—138.)



An animal yoke comprising a pair of sections identical to each other, and adapted to be reversed when connected together, each section formed with a bowed portion, a foot at one end of the bowed portion, an arm at the other end of the bowed portion, and in alinement with said foot, a second arm projecting laterally from the bowed portion medially thereof, hook ends on said arms, the foot and first-named arm being flat, whereby when the two sections are reversed relative to each other, the foot on each section will rest against the arm adjacent thereto of the other section, and removable fasteners passed transversely through the feet and arms adjacent thereto of both sections for detachably securing said sections together.

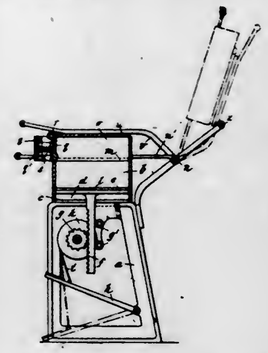
1,347,353 AUTOMATIC TROUGH-VTLVE. FRITZ STRIEGLER, Fort McKavett, Tex. Filed May 21, 1918. Serial No. 235,787. 2 Claims. (Cl. 137—104.)

1. The combination with a trough having an inlet pipe extending therein, of a valve normally seated by water pressure for regulating the inflow of water from the pipe, a horizontal operating lever connected with the valve, a submerged counter-balancing weight on one end of the lever, and a normally submereged float at the opposite end of the lever, the weight of the float when submerged being the same or slightly less than that of the counter-balance and greater than that of the counter-balance when resting on the surface of the water whereby to move the lever and unseat the valve when the surface of the water falls below said float.



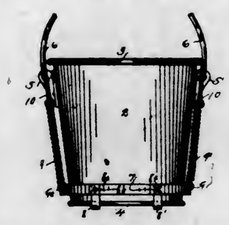
1,347,354. WASHBOILER. ANTONIO T. TIMOSCI, San Jose, Calif. Filed Dec. 5, 1919. Serial No. 342,695. 1 Claim. (Cl. 68—30.)

A wash boiler having rigidly held within the same a false bottom for supporting the clothes to be washed above the bottom of the boiler, said bottom being of imperforate material and shaped to fit within the boiler and having a relatively narrow and relatively long slot at the center of the boiler extending from near one end of the boiler to near the other, said bottom having alternating ribs and grooves extending from the outer edges thereof inwardly toward the slot and inclining downwardly from its peripheral edge toward the slot.



1,347,355. MOTORCYCLE-STAND. CLARENCE B. TINSLEY, Cleveland, Ohio. Filed May 12, 1919. Serial No. 296,416. 2 Claims. (Cl. 208—75.)

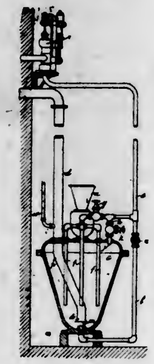
1. A device of the character described including a swingingly mounted support, a pivotally mounted foot pedal, a rigidly mounted rack bar composed of spaced sides, a plurality of teeth, a shoulder formed on the inner surface of one of the sides of the rack bar, the shoulder being positioned near the rear end of the rack bar, the foot pedal operating between the sides of the rack bar and being engageable with any of the teeth or the shoulder, a connecting rod operably arranged betwen the pedal and the support, and a coil compression spring connected to the



connecting rod near its point of connection of the pedal and to the frame for either facilitating the maintenance of the pedal in engagement with any one of the teeth so as to consequently retain the support in an operative position or for automatically returning the support to an inactive position so that the lever will be positioned in engagement with the shoulder.

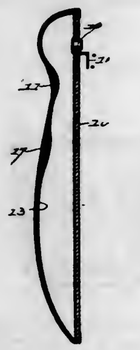
1,347,356. MACHINE FOR MOLDING CONCRETE OR LIKE BLOCKS. GEORGE ALEXANDER TONKIN, London, England, assignor of one-half to Percy Evans, London, England. Filed Dec. 15, 1919. Serial No. 344,997. 8 Claims. (Cl. 25—41.)

8. In a machine for molding concrete blocks, the combination of a lower mold part, a tray, means for moving the said tray through the said lower mold part, and a combined rammer and upper mold part mounted so as to be movable relatively to the said lower mold part.



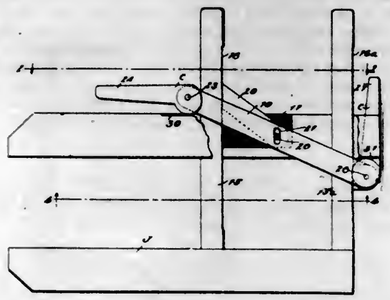
1,347,357. GUARD FOR METAL PAILS. JOHN C. WRIGHT, Syracuse, N. Y. Filed Aug. 28, 1919. Serial No. 320,373. 3 Claims. Cl. 220—69.)

1. The combination with a pail having perforated lugs at its opposite sides, of a hoop loosely slipped over the bottom end of the pail, U-shaped guards having their free ends secured to the hoop and spaced apart to receive and support the bottom of the pail, and tension springs resiliently connecting the hoop to the lugs of the pail.



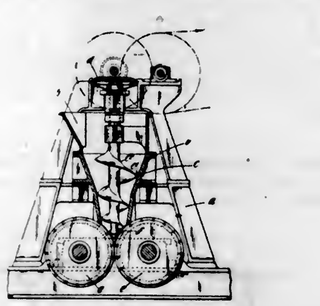
2. In a device of the class described, the combination with a pail, of a ring loosely encircling the bottom portion of the pail, U-shaped runners rigidly secured to said ring and supporting the weight of the pail, said runners disposed parallel to each other and spaced apart to prevent the rocking of the pail, and tension springs for detachably securing the device to the pail.

1,347,358. FLUID OR AIR DIRECT-PRESSURE LIFTING AND FORCING APPARATUS FOR SOLIDS AND SEMISOLIDS. SAMUEL HENRY ADAMS and COLIN HENRY ADAMS, Fulford, England. Filed Feb. 28, 1919. Serial No. 279,830. 3 Claims. (Cl. 302—53.)



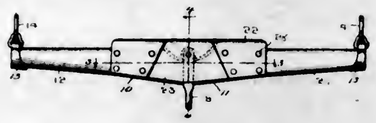
1. A displacement ejector consisting of a closed receiver with an inlet for the material to be ejected, air-pipe-connections to the upper part of the receiver, a plurality of air-pipes opening in a downward direction into the body of the receiver near the lower part thereof, a discharge pipe extending into said receiver and opening in a downward direction near the bottom of said receiver, an air pipe extending into the bottom of said receiver and opening upward in the direction of the inlet of the discharge pipe, a source of compressed air, an air-outlet and a power-actuated valve whereby said air-pipes are alternately connected to the source of compressed air and are disconnected therefrom.

1,347,359. PNEUMATIC NECKTIE. JOSEPH K. ALLISON, Iowa Falls, Iowa. Filed Jan. 15, 1920. Serial No. 351,676. 3 Claims. (2—83.)



1. A necktie having a base or backing and a flexible facing carried thereby, and an inflatable sack or lining interposed between said base or backing and the facing.

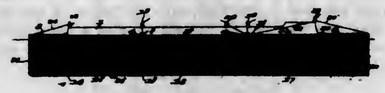
1,347,360. PORTABLE CLAMP. ALOIS ANTHONY, Baltimore, Md. Filed Dec. 11, 1919. Serial No. 344,069. 3 Claims. (Cl. 144—297.)



1. A wood working clamp comprising a stationary jaw, beams carried by said jaw, a movable jaw slidable on said beams, links pivoted on the movable jaw, and cam levers carried by said links and engageable with the opposite sides of the movable jaw for effecting when operated a movement on the forward end of the movable jaw toward the stationary jaw, and a rearward movement of the opposite end of the movable jaw away from the stationary jaw.

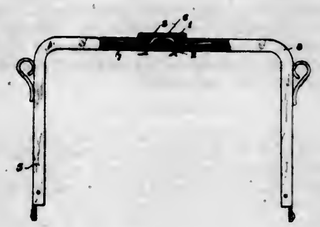
1,347,361. BRIQUET-MOLDING MACHINE. DANDRIDGE HUNT BIBB, Aldwych, London, England. Filed July 11, 1919. Serial No. 310,240. 6 Claims. (Cl. 25—77.)

1. A briquet molding machine comprising a framework, a pair of rollers, a hopper above the rollers, a tapered lower part to the hopper, a tapered screw in the said lower part and having a web which is sloped downwardly from about the center to the outer edge the said screw having its smaller end adjacent the periphery of the said rollers, means for rotating the rollers in opposite directions and means for rotating the said screw.



1,347,362. SWINGLETREE. WILLIAM F. BOSSE, Stamford, Tex. Filed Feb. 19, 1920. Serial No. 359,777. 4 Claims. (21—78.)

1. A draft appliance of the character described comprising a swinging member having trace-attaching devices

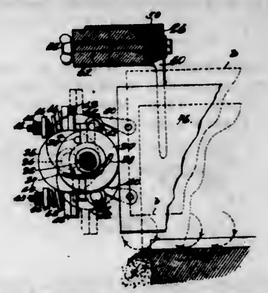


at its ends, a clevis loosely connected with the member, a saddle carried by the member and having a concave runway for the clevis to traverse, a covering saddle plate for the first-named saddle, and a roller in the clevis and contacting with the wall of the runway.

1,347,363. TORPEDO-NET FOR SHIPS. CHARLES F. DATHAN, Chicago, Ill. Filed Dec. 7, 1918. Serial No. 265,808. 2 Claims. (Cl. 114—240.)

1. The combination with the hull of the ship of vertically swinging booms on the bow and stern thereof, laterally swinging booms on the sides of the hull, a sectional shield composed of a plurality of reticulated sections, connecting cables trained through the adjacent edges of the sections and through the ends of the laterally swinging booms and connecting to the hull at their terminals, other connecting cables trained through the outer side edges of the end sections for connecting them together and also trained through the outer ends of the vertically swinging booms and having their upper terminals connected to the bow and stern of the hull, and supporting cables trained through the ends of the booms and the upper edges of the sections of the shield and connected to the hull.

1,347,364. FASTENER FOR BAGS, PURSES, AND THE LIKE. HENRY EDMONDS, Birmingham, England. Filed Aug. 11, 1919. Serial No. 316,742. 2 Claims. (Cl. 292—228.)



1. A device of the character described comprising, in combination, two frame members, one frame member having an aperture therein, a spring adapted to bear on the underside of said frame member and having a bent portion adapted to project through said aperture for vertical spring movement therein, a catch lever having a channeled lug adapted to engage the bent portion of said spring and being adapted to fulcrum at one edge upon said frame member and means carried by said catch member and the second frame member for securing said frame members in latched position.

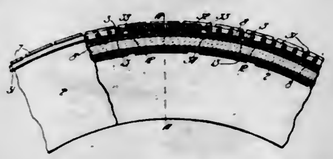
1,347,365. HAMMER-SAW OR LINE-HAMMER. HENRY J. FLETCHER, Brainerd, Minn. Filed Oct. 24, 1918. Serial No. 259,552. 9 Claims. (Cl. 125—1.)

1. In a machine of the character described, a suitable overhead frame, a counterbalanced frame mounted upon the overhead frame and having vertical movement with respect to the said overhead frame, and means for channeling the stone, the said means comprising a cutting member mounted upon the counterbalanced frame, and devices

mounted upon the said counterbalanced frame for imparting simultaneous longitudinal and vertical move-

ment to the channeling member, whereby to cause the said member to impart rapid hammering blows against the stone.

1,347,366. SPARK-PLUG-CLEANING DEVICE. JOHN T. GALBREATH, Cynthiana, Ky. Filed Aug. 4, 1919. Serial No. 315,235. 4 Claims. (Cl. 141—7.)



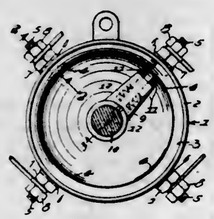
1. A spark plug cleaning device comprising a hollow body adapted at one end to detachably receive the threaded portion of a spark plug for the positioning of the electrodes of the latter interiorly of said body, and brushing means interiorly of the body for brushing action upon the electrodes of the spark plug to clean the same.

1,347,367. SPARKING PLUG FOR INTERNAL-COMBUSTION ENGINES AND METHOD OF MANUFACTURING THE SAME. CHARLES EMILE GERBAUD, Paris, France. Filed Feb. 24, 1919. Serial No. 278,694. 3 Claims. (Cl. 123—169.)

1. The herein described process for manufacturing spark plugs, for explosion motors consisting in casting a glass insulator on a metal rod which forms an electrode and then immediately while the insulator is in a plastic state, casting a metal shell upon the insulator.

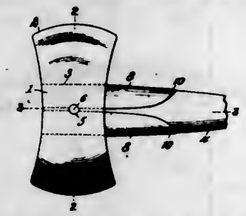
1,347,368. NON-SKID PROTECTOR. THOMAS H. GYTON, Collingwood, Victoria, Australia. Filed Sept. 23, 1918. Serial No. 255,375. 3 Claims. (Cl. 152—16.)

2. A non-skid protector comprising a resilient spacing member adapted to fit in an annular groove formed in the tread of a tire, a series of plates having U-shaped projections adapted to fit in the groove, said plates being se-



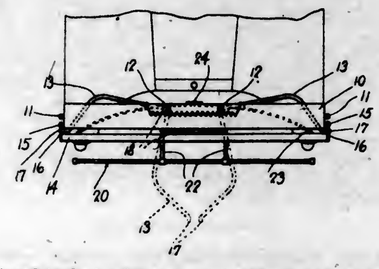
cured to and held in spaced relation by the resilient spacing member, and flexible means for holding the plates in the groove to prevent centrifugal movement of said plates.

1,347,369. DRAFT-HOOK. MARTIN D. HAMRICK, Chehalis, Wash., assignor of one-half to Andrew E. Young, Chehalis, Wash. Filed May 3, 1919. Serial No. 294,608. 5 Claims. (Cl. 24—241.)



4. A draft hook comprising a shank or stem, a curved bill, a guard pivotally connected at one end to the shank or stem and movable to and from a position where it will close the opening between the shank and bill, a projection on the shank adjacent the pivotal point of the guard, a locking ring surrounding the shank and movable to and from engagement with the guard past said projection, the ring having an interior groove to receive said projection and being adapted to be turned about the shank when it is between the projection and guard, to constitute a lock for holding the guard in closed position.

1,347,370. TIMER FOR INTERNAL-COMBUSTION ENGINES. OSCAR H. HASSELBAUM, Fresno, Calif. Filed May 15, 1918. Serial No. 234,639. 1 Claim. (Cl. 200—26.)

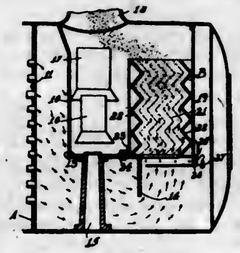


In a spark timing-device, the combination of a casing, an insulating ring carried in the casing, contact segments inset in the inner periphery of said ring, a rotating shaft having a portion within the casing and being concentrically disposed with reference to said ring, a brush holder within the casing and carried by and rotated by said shaft, and a pair of yieldably mounted brushes carried in the said holder and disposed side by side, the brushes bearing upon the insulating ring and the segments but being so positioned that one leads the other in the direction in which they move, as herein shown and specified.

1,347,371. AX-HANDLE SHIELD AND FASTENING. WILLIAM THOMAS HATTEN, Hay Creek, Oreg. Filed Apr. 29, 1919. Serial No. 293,489. 3 Claims. (Cl. 287—36.)

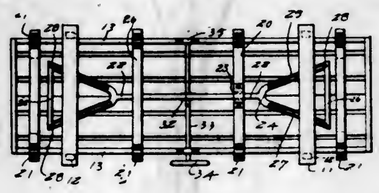
1. The combination with an ax head or similar tool having an eye and a handle therefor, a metallic shield plate U-shaped in cross section bent to conform to the shape of the handle and practically surrounding the same at the end where entering the eye, said plate fitting against the wall of the eye and extending across the plane of action of the tool and projecting along the handle beyond the inner side of the head a sufficient distance to serve as a protection for that portion of the handle contiguous to the head, said plate having an equal thickness throughout and a width within the eye greater than the corresponding dimension without the eye, said handle having a transverse bore, said ax head also having a transverse bore, said shield plate having a transverse seat, a wedge adapted to be driven into the end of the handle where entering the eye of the ax head and having a transverse aperture adapted to register with the bores in the handle and head and the seat in the shield, and a transverse pin of a size to fit the specified bores, aperture and seat to hold the parts together.

1,347,372. LIFE-SAVING DEVICE. IGNATIUS A. HEBERT, New Orleans, La., assignor to The Hebert Life Saving Device Co., Inc., New Orleans, La., a Corporation of Louisiana. Filed Sept. 26, 1919. Serial No. 326,468. 5 Claims. (Cl. 293—16.)



1. A safety device for automobiles having laterally movable cooperating grappling arms for grasping the body of a person with which the vehicle collides, and an impact member movable rearwardly upon engagement with an object in the path of the vehicle for controlling the movement of the grappling arms, said impact member consisting of a cross bar and suspending arms and being yieldingly held in and returned to its advanced position subsequent to impact with an object.

1,347,373. ATTACHMENT FOR SODA-FOUNTAIN FAUCETS. JAMES H. HOLLAND, St. Louis, Mo., assignor to Holland Manufacturing Co., St. Louis, Mo., a Corporation of Missouri. Filed Apr. 23, 1920. Serial No. 375,981. 10 Claims. (Cl. 259—44.)

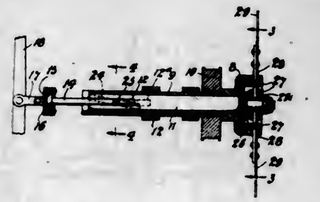


1. An attachment for soda fountain faucets, having a gassing discharge passage and filling discharge passages, in combination with a revoluble stirrer operated incidentally to the discharge of liquid from said filling discharge passages.

1,347,374. SPARK-ARRESTER. ALBERT EDMUND HUDSON, Calgary, Alberta, Canada. Filed Oct. 13, 1919. Serial No. 330,191. 1 Claim. (Cl. 183—99.)

A spark arrester and extinguisher of the class described, comprising a removable section of box-like formation open at the top and bottom, a plurality of corrugated baffle walls in the section, and a pair of corrugated and finely perforated plates embracing the baffles and located against the front and rear walls of the section.

1,347,375. DUMPING-BED FOR WAGONS. JOHN WILLIAM HUFFMAN, Marion, Mich. Filed Sept. 25, 1918. Serial No. 255,657. 6 Claims. (Cl. 298—27.)

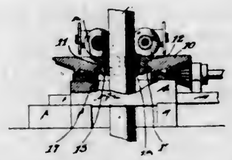


1. A dumping apparatus including a plurality of spaced sections, a plurality of releasing sections coacting with the spaced sections, forks having their arms slidably connected with the releasing sections, and means to reciprocate the forks for positioning said releasing sections.

1,347,376. RAIL-JOINT. JOHAN JANIK, Johnstown, Pa. Filed Mar. 5, 1920. Serial No. 363,371. 2 Claims. (Cl. 238—226.)

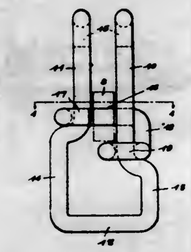
1. A rail joint comprising a pair of fish plates, means for connecting one plate with the rails, a member carried by said plate of the same cross sectional shape as the rails and adapted to fit between the ends of the rails, said second fish plate having longitudinally extending keyways therein, keys on said member for engaging said keyways and means for locking said second plate against movement.

1,347,377. REVERSING FAN. PETER JENSEN, Wayne, Alberta, Canada. Filed Aug. 8, 1919. Serial No. 316,213. 1 Claim. (Cl. 170—163.)



A variable pitch fan mechanism for use in combination with automobile radiators, comprising a tubular shaft, a casing made on the tubular shaft, a gear transmission contained in the casing, fan blades related with the gear transmission, said shaft provided with a longitudinal bore and a transverse bore, a shaft confined in the longitudinal bore, a pin fixed to the shaft and confined in the transverse bore, the shaft having a journal-head bearing connection made on the outer end thereof, and a lever attached to the journal-head bearing connection to effect a change of the pitch of the fan blades.

1,347,378. SPARK-GAP INDICATOR. TOMLINSON F. JOHNSON, Jr., Atlanta, Ga. Filed Jan. 12, 1920. Serial No. 350,764. 9 Claims. (Cl. 175—183.)



1. In a high tension alternating current transmission line, an insulator for supporting the line conductor having a series spark gap between the line conductor and ground.

1,347,379. ATTACHMENT FOR ROTARIES. HORACE G. JOHNSTON, Corsicana, Tex., assignor to Genevieve Johnston, Corsicana, Tex. Filed May 28, 1919. Serial No. 300,459. 3 Claims. (Cl. 255—23.)

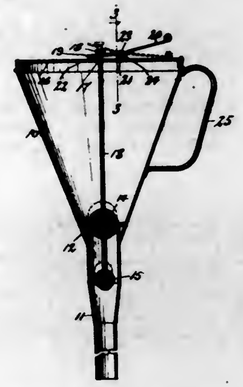
1. The combination with a rotary table having a central opening of an inwardly extending ledge formed therein with an aperture formed therethrough, a bushing proportioned to be inserted through the opening and having a flange proportioned to rest upon the ledge and means formed upon the bushing proportioned and positioned to pass through said aperture and engage under the ledge and prevent the withdrawal of the bushing from the central opening except when said aperture and means register.

1,347,380. UNCOUPLING DEVICE FOR CAR-COUPLINGS. EDWIN JONES, Cleveland, Ohio. Filed Aug. 28, 1919. Serial No. 320,350. 5 Claims. (Cl. 213—59.)

1. A device for connecting a movable locking member and a movable releasing member together comprising a link carried by the locking member, a connector carried by the releasing member, and coacting means carried by said link and said connector for slidably coupling said link to said connector, said means being arranged for disengagement by a rotary movement of said connector with respect to said link, whereby to detach said connector from said link while said connector remains attached to said releasing member.

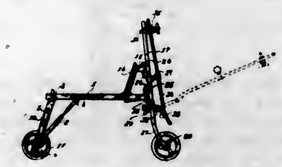
1,347,381. RIFLE-CLEANING ROD. JOHN BERTRAND JONES, Brookville, Pa. Filed Feb. 9, 1920. Serial No. 357,151. 6 Claims. (Cl. 42—92.)

1. An implement of the character described including two sections pivotally connected to each other whereby the sections may be turned into parallel relation or into alinement, a longitudinally slotted sleeve mounted upon one of said sections, said section having a transverse pin engageable with the slots of the sleeve, the slots of the sleeve being open at one end and the sleeve being provided with notches in its end between said slots with which said pin is adapted to engage, and means for releasably locking the sleeve in position with its notches in engagement with the pin to thereby hold the sleeve from longitudinal shifting movement and over the joint between the sections.



1,347,382. CANE. WILLIAM W. KARRO, Great Neck, N. Y. Filed Oct. 3, 1919. Serial No. 328,188. 2 Claims. (Cl. 46—37.)

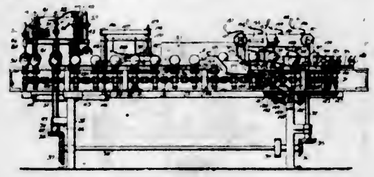
1. A toy comprising a cane or wand, an electro-magnet embedded in the cane and having one end exposed, a battery mounted within the cane adjacent the handle thereof, wires connecting the magnet and battery and a switch



connected in circuit with said parts and disposed in convenient reach of the user for the purpose specified.

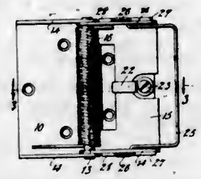
1,347,383. FUNNEL. WILLIAM F. KENDT, Buffalo, N. Y. Filed Oct. 7, 1919. Serial No. 329,034. 2 Claims. (Cl. 226—36.)

1. A funnel comprising a body or receptacle having an outlet at its lower small end and a valve seat around said outlet, a cross bar extending over the upper end of said body and connected at its opposite ends to said body on diametrically opposite sides thereof, an upright rod guided at its upper end on said cross bar and provided with a valve which controls said outlet, a loop secured to the upper side of said cross piece, and a lever having a downwardly-bent central part which is confined between said loop and cross piece and having one of its arms connected with said rod while its other arm serves as a handle.



1,347,384. TOY. ROBERT M. KINNARD, Trenton, N. J. Filed Oct. 20, 1919. Serial No. 331,829. 3 Claims. (Cl. 208—165.)

1. A device of the character described, comprising a steering post, a bracket connected thereto and provided

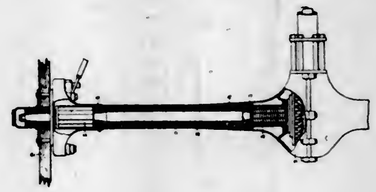


with a pair of angularly disposed channels, a seat member, an upright member connected to the seat member and means for attaching said seat member to either of the channel portions of the bracket to convert the device into a vehicle designed for a sitting or standing position, the seat member being located in a horizontal plane when one of said channels is engaged and the upright member being located in a horizontal plane and forming a foot support when the other channel is engaged.

1,347,385. MACHINE FOR PEELING TOMATOES. CHARLES KIRINO, Ogden, Utah. Filed Jan. 28, 1920. Serial No. 354,639. 21 Claims. (Cl. 146—14.)

1. A machine for peeling tomatoes or similar articles, including an endless carrier belt having its runs approximately in a horizontal plane, holders on said belt adapted to receive the individual articles and accessible at the feed point of the machine for the placing thereon of the articles to be peeled, and means disposed about the machine adjacent to the path of travel of the belt, to perform successive operations on the articles for effecting the removal of the skins.

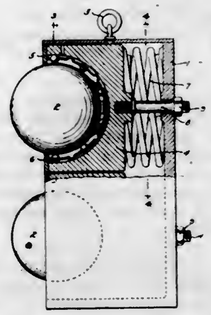
1,347,386. DETACHABLE SPRING-HINGE. PHILIP KLEIN and HARLAND HUMPHREY, Mansfield, Ohio. Filed Sept. 23, 1919. Serial No. 325,732. 3 Claims. (Cl. 16—25.)



2. A detachable spring hinge consisting of two leaves pivoted together, one of said leaves being fixed to a swinging member, a plate fixed to the frame of said swinging member, an opening in the other of said leaves, an offset flange formed on said plate arranged to engage the edge of said opening, a depending flange formed on the edge of the last mentioned leaf and arranged to engage the edge of said plate, and a finger pivoted to said plate so as to engage the last mentioned leaf thereby locking said leaf to the plate.

1,347,387. PAINT COMPOSITION. KUSTAA KOIVISTO, Portland, Oreg. Filed Mar. 28, 1919. Serial No. 285,899. 2 Claims. (Cl. 134—52.)

2. A paint composition comprising a mixture of twelve pounds of copper sulfate and twelve pounds of alum, thirty-eight pounds of rye flour, one hundred and twenty-five to one hundred and fifty pounds of dry coloring matter, two gallons of pine tar and ten gallons of linseed oil.

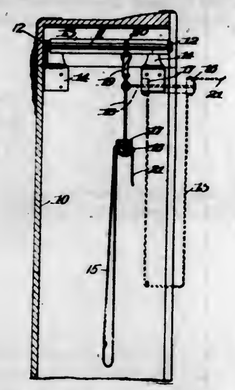


1,347,388. LUBRICATING-PACKING. HARRY A. LACERDA, Schenectady, N. Y., assignor of one-half to Ralph W. Benson, New York, N. Y. Filed Oct. 17, 1917. Serial No. 197,068. 1 Claim. (Cl. 286—7.)

In a vehicle having a driving axle, a housing through which extends the driving axle, and a bearing at each end of said driving axle, a tubular packing filling the annular space between the axle and the housing, said packing being made in short sections and pliable to permit of tightly packing it in said annular space so as to

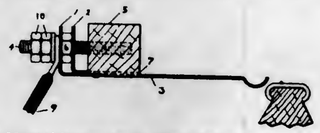
completely fill said space from one bearing to the other, said packing having lubricating qualities to lubricate the axle and being of a fatty nature so as to resist the flow of a lubricating medium.

1,347,389. ANTIFRICTION-BUFFER. LEE LARSEN, Tampico, Mexico. Filed Nov. 4, 1919. Serial No. 335,587. 4 Claims. (Cl. 114—220.)



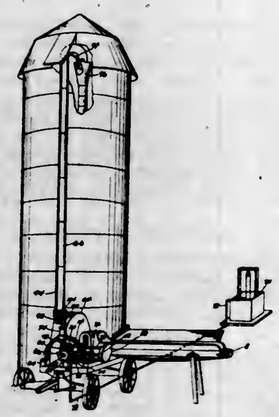
1. In an anti-friction buffer of the class described, an anti-friction element, and a shock absorbing mounting in which said element is supported with freedom of rotation and with a portion of the contact surface of said element presented beyond the face of said mounting, said mounting comprising a buffer head, a housing, said head being received entirely within said housing with freedom of movement in a direction toward and from the force of impact of an object therewith, and shock absorbing means within the housing between the latter and said buffer head.

1,347,390. SELF-CLOSING TRUNK-BAG. HENRY KENNETH LIKLY, Rochester, N. Y., assignor to Henry Likly Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 28, 1917. Serial No. 151,424. 7 Claims. (Cl. 190—13.)



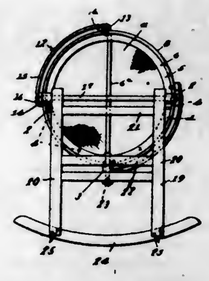
1. The combination with a support and a rod pivotally suspended therefrom, of a bag, said rod being attached adjacent its end remote from said support to one side of the mouth of the bag while the opposite side of the mouth of the bag is slidably secured to said rod above the first mentioned side when the rod is in a position normally depending from the support, the pivotal support

permitting movement of the rod above the horizontal plane through the pivotal support whereby the slidable



side of the mouth of the bag may automatically slide on the rod to open the bag.

1,347,391. ADJUSTABLE ELECTRIC CONTACT. FRANCIS HOWARD LORKING, Wayville, South Australia, Australia. Filed Dec. 5, 1919. Serial No. 342,634. 3 Claims. (Cl. 200—170.)



2. An adjustable contact, comprising a contact having at one end of its stem bifurcations, said bifurcations being perforated and extending at right angles to the stem, an insulating block, a threaded stem projecting from the insulating block parallel with the stem of the contact and extending through the perforations of the bifurcations of the stem, and a nut on the stud between the said bifurcations.

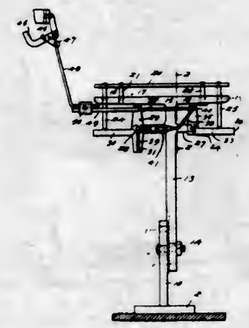
1,347,392. AUTOMATIC WATER-FEED FOR ENSILAGE APPARATUS. HARRY A. LYON, Kansas City, Mo., assignor of one-half to John L. Orr, Springfield, Ohio. Filed Sept. 15, 1919. Serial No. 324,022. 2 Claims. (Cl. 146—29.)

1. In an ensilage apparatus, the combination with ensilage cutting mechanism, of a conduit for conducting the material away from said cutting mechanism, a blower device for driving the material through said conduit away from said cutting mechanism, and pumping means responsive to the rate of operation of said cutting mechanism and operating to discharge a jet of water into the path of the material within said conduit at a point immediately adjacent to the blower device.

1,347,393. COMBINATION SCREEN-BED. ALFRED W. MCCREARY, Mount Pleasant, Pa. Filed Nov. 22, 1919. Serial No. 339,909. 3 Claims. (Cl. 5—56.)

1. In a bed, a semi-cylindrical body provided with semi-circular end members, upper semi-circular end members detachably secured to the end members of the body and coöperating therewith to form circular end frames, guide rings detachably secured to the body in concentric spaced relation to said end frames, and cover members slidable on said rings and adapted when raised to cover the upper portion of said body.

1,347,394. HEADLIGHT. ALTON R. MARTIN, Buffalo, N. Y. Filed June 20, 1919. Serial No. 305,454. 5 Claims. (Cl. 240—41.)

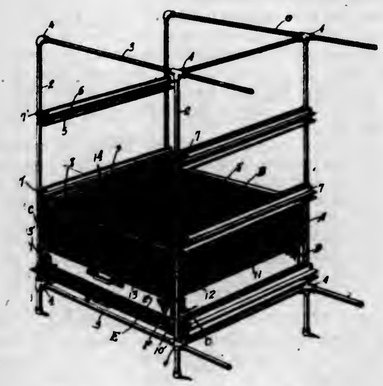


1. In a headlight, a casing having an inner projecting reflector, a source of light within the casing, and a refracting and reflecting member positioned below the light source and adapted to refract certain of the light rays downwardly onto the traction surface and reflect other light rays against the projecting reflector so as to be projected thereby outwardly of the casing.

1,347,395. STOP-MOTION FOR LOOMS. PHINEAS A. MILLIS, Lewiston, Me. Filed May 13, 1920. Serial No. 381,110. 6 Claims. (Cl. 139—52.)

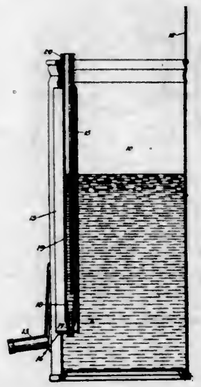
3. In a device of the class described, a plurality of pivotally mounted devices movable to operative position in opposite directions, means for operating said devices

by the downward movement of the harness of a loom, a feeler bar actuating device, and means for imparting



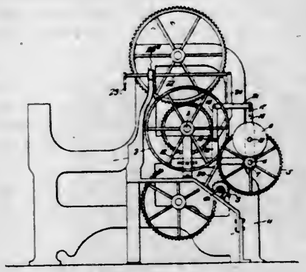
thrust thereto in one direction upon the movement of said pivoted devices in opposite directions.

1,347,396. SPLINT APPARATUS. ALVA B. MULVANY, Kansas City, Mo., assignor of one-half to Lemuel J. Husted, Kansas City, Mo. Filed Apr. 25, 1918, Serial No. 230,757. Renewed June 18, 1920. Serial No. 389,963. 7 Claims. (Cl. 128—85.)



1. In splint apparatus, a hip supporting frame approximately flat, a hole in said frame to receive the projecting portion of the hips, and a leg supporting frame detachably secured to said hip supporting frame.

1,347,397. ANIMAL-CAGE. GEORGE R. J. NEWMAN, Cherrydale, Va. Filed Sept. 27, 1919. Serial No. 326,752. 6 Claims. (Cl. 119—17.)

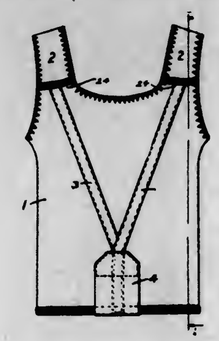


1. An animal caging device comprising a drip pan, a cage, a track for said pan and cage, said track comprising a pair of superposed angle irons in contact with each other, one forming the track for said pan and the other the track for said cage and common means for securing said tracks.

1,347,398. DOUCHE-CAN. FRANK J. O'ROURKE, New York, N. Y. Filed Feb. 6, 1919. Serial No. 275,425. 2 Claims. (Cl. 73—54.)

1. In a douche can, the combination with a vessel open at the top and having an inset wall at its front portion forming a niche over a bottom wall; of a nipple in the niche and opening through the bottom thereof into the vessel, said nipple extending upwardly and being provided with a rubber sleeve, and a diaphanous tube extending in and throughout the length of said niche and having its lower end fitting on the said rubber sleeve and its upper end extending through the upper end of the niche.

1,347,399. LOOM ATTACHMENT. JEAN B. OUELLETTE, New Bedford, Mass. Filed Mar. 14, 1919. Serial No. 282,526. 5 Claims. (Cl. 139—67.)

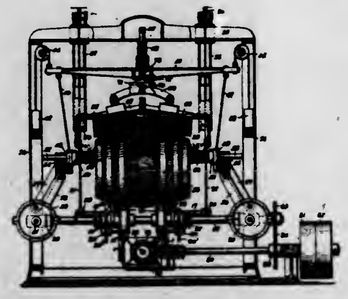


1. The combination with the crank shaft of a loom, a tappet fast thereon, a pulley also fast on said crank shaft, a motor shaft and a gear or pinion fast on the motor shaft; of a movable gear connected with the gear on the motor shaft and having a portion arranged to engage the pulley on the crank shaft, and movable means carrying the said gear and manually operable to move the same into engagement with the pulley; said movable means being subject to movement in the opposite direction by the tappet on the crank shaft to move the gear out of engagement with the pulley.

1,347,400. CHILD'S UNDERGARMENT. CHARLES E. OVENSHIRE, Minneapolis, Minn., assignor to Minneapolis Knitting Works, Minneapolis, Minn., a Corporation of Minnesota. Filed Oct. 24, 1919. Serial No. 333,048. 2 Claims. (Cl. 2—98.)

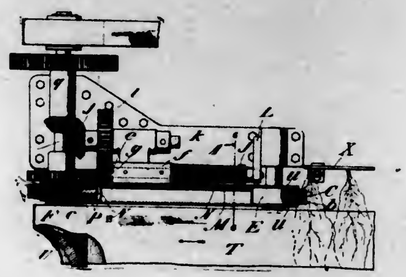
2. An undergarment comprising a body of tubular knitted fabric having spaced pairs of front and back shoulder

tabs, a pair of separate shoulder pieces each formed of plurality of thicknesses of knitted fabric, secured at their ends transversely across the respective shoulder tabs, and reinforcing tapes having their upper ends connected to



and terminating at the ends of said shoulder pieces, whereby the latter only extend over the shoulders, said tapes extending downward over the body of the garment and having their lower ends adapted for supporting a garment.

1,347,401. COMPOSITION FOR ARTIFICIALLY INDUCING MOLD ACTION IN SOILS. REDDIN W. PARRAMORE, Somerville, N. J. Filed Aug. 11, 1919. Serial No. 316,765. 7 Claims. (Cl. 71—9.)



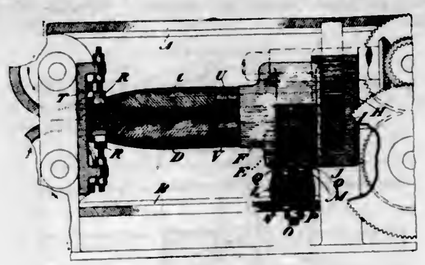
4. A mold forming and propagating composition for fertilizing purposes, comprising a vegetable meal made from dried and ground leaves and stems of green or immature plants, mixed with ground inorganic fertilizing material.

1,347,402. BARREL-WASHING MACHINE. HENRY REININGER, New Orleans, La. Filed June 20, 1918. Serial No. 240,965. 6 Claims. (Cl. 141—6.)

6. A barrel washing apparatus comprising a support for a barrel, means for rotating said support whereby the barrel will be rotated, means for supplying exteriorly a washing liquid to the barrel at each end and on the periphery, a brush engaging the periphery of said barrel, a brush engaging each end of the barrel, a beam arranged above said brushes, a link connecting the end brushes with said beam, a pair of cables connected with said beam, pulleys over which said cables pass, a pair of weights connected to said cables whereby the beam and parts connected therewith are yieldingly supported by said weights and associated parts, means connected with said end brushes for moving said end brushes toward and from the ends of said barrel, means for moving a barrel on to said support, and means for transferring the washed barrel from said support.

1,347,403. TOBACCO-STEMMING MACHINE. HANS F. RICHTER, Winston-Salem, N. C., assignor, by mesne assignments, to R. J. Reynolds Tobacco Company, Winston-Salem, N. C., a Corporation of New Jersey. Filed Apr. 27, 1916, Serial No. 93,952. Renewed May 12, 1919. Serial No. 296,535. 30 Claims. (Cl. 131—57.)

2. A tobacco stemming machine having a pair of endless traveling leaf holding belts, each belt having a yielding face consisting of wire teeth, and the co-acting runs of the belts holding and retaining the blades of the leaves during the stemming action, in combination with stem gripping rolls which pull the stems from the blades of the leaves as the latter are carried along by the conveying belts.



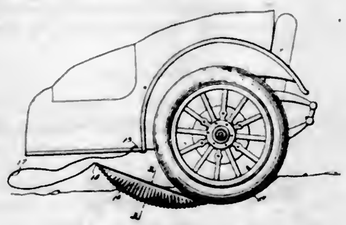
7. A tobacco stemming machine having, in combination, a leaf conveyer; stem gripping rolls, each journaled at one end only, the gap between the rolls being open at the feed end of the machine; and thrust rolls, one for each stem gripping roll, the free ends of said gripping rolls being between said thrust rolls.

20. A tobacco stemming machine having as its stemming instrumentalities a leaf conveyer consisting of a pair of endless traveling leaf holding and grasping conveyer belts and a pair of stem gripping rolls alongside and close to the active runs of said belts, said rolls gripping the butt ends of the stems and the active runs of the belts grasping the bases of the leaves close to the gripping rolls and conveying the leaves lengthwise of the rolls as the rolls pull the stems from the leaves, each belt having a yielding grasping face consisting of wire teeth and the adjacent active runs of the two belts traveling in a straight path with the ends of their teeth in close proximity, and the stem gripping rolls having rough surfaces and being tapered at the feed end of the machine with the space between the rolls gradually diminishing toward the discharge end of the machine and being alongside the meeting faces of the belts, in combination with mechanism for driving the belts and the rolls at different surfaces, the surface speed of the rolls being much greater than that of the belts.

26. A tobacco stemming machine having as its stemming instrumentalities a traveling leaf holding and grasping conveyer, and a pair of stem gripping rolls, said rolls gripping the butt ends of the stems and the conveyer yieldingly grasping the bases of the leaves close to the gripping rolls and conveying the leaves lengthwise of the rolls as the rolls pull the stems from the leaves.

1,347,404. TOBACCO-STEMMING MACHINE. HANS F. RICHTER, Winston-Salem, N. C., assignor, by mesne assignments, to R. J. Reynolds Tobacco Company, Winston-Salem, N. C., a Corporation of New Jersey. Filed July 1, 1916, Serial No. 107,119. Renewed May 12, 1919. Serial No. 296,536. 5 Claims. (Cl. 131—57.)

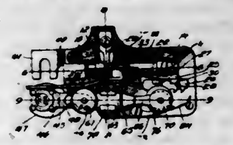
1. A tobacco stemming machine having, in combination, a pair of stem gripping rolls, one of said rolls having a knife and the other an opposing anvil for cutting across the stems, said knife and anvil being located at the terminus of the gripping surface of the rolls, and a traveling leaf conveyer which feeds the leaves and stems lengthwise of the rolls and brings the stems into position to be cut by the knife.



2. A tobacco stemming machine having, in combination, a pair of stem gripping rolls, one of said rolls having a knife for cutting across the stems, said knife being located at the terminus of the gripping surfaces of the rolls, and a traveling leaf conveyer which feeds the leaves and stems lengthwise of the rolls and brings the stems into position to be cut by the knife.

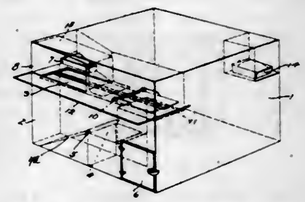
3. A tobacco stemming machine having, in combination, a traveling leaf conveyer, and a pair of stem gripping rolls having knurled or roughened surfaces to enhance their grip upon the stems, the knurling or roughening extending spirally throughout the gripping surfaces of the rolls for the purpose of aiding in feeding the stems lengthwise of the rolls as the leaves are advanced along the rolls by the conveyer.

4. A tobacco stemming machine having, in combination, a pair of stem gripping rolls journaled at their inner ends and having separated and spaced cylindrical ends constituting outer journals for said rolls, and fixed thrust bearings for said cylindrical ends, said bearings being open on their facing sides.



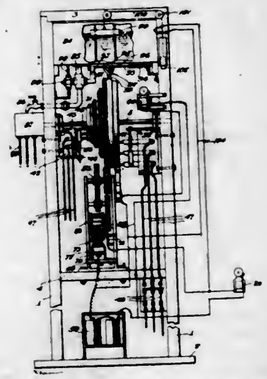
5. A tobacco stemming machine having rotating gripping rollers geared together, in combination with a movable bearing for one of said rolls, means for limiting the movement of said bearing so as to prevent disengagement of the gears, a frame in which said movable bearing is mounted, a bolt fastened to one wall of said frame, a plate movable on said bolt, pins extending through the wall of said frame and between said movable plate and said movable bearing, a second plate carried by said bolt in normally fixed position, and a stiff spring surrounding said bolt and interposed between said plates.

1,347,405. ROAD-SHOE FOR AUTOMOBILES. LOUIS S. ROBBINS and WILLIAM E. GILMORE, Klamath Falls, Oreg. Filed Jan. 3, 1920. Serial No. 349,313. 2 Claims. (Cl. 238—14.)



1. The herein described road shoe for traction vehicle wheels comprising an open topped trough-like member having the general form of a segment of a flat drum, the bottom surface of which longitudinally is arc shaped on a radius greater than that of the wheel.

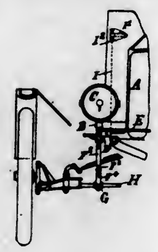
1,347,406. SEWING-MACHINE ATTACHMENT. BENJAMIN E. ROBINSON, Tulsa, Okla. Filed Aug. 3, 1918. Serial No. 248,144. 3 Claims. (Cl. 112—115.)



1. In a device of the class described, a base plate, a reciprocable member mounted thereon, a rack bar movable with the reciprocable member, a rotary device, a button holding device, said rotary device being engaged by the rack bar and giving to the button holding device an oscillating movement and means for actuating the reciprocable member from the needle bar of a machine, said means including a resilient device placed under compression and then automatically released.

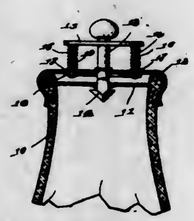
1,347,407. EVER-SET CAGE-TRAP. HERMAN ROHLFF, Davenport, Iowa. Filed Oct. 29, 1919. Serial No. 334,119. 1 Claim. (Cl. 43—69.)

In an ever set cage trap, a confining cage and a supplemental cage, an entrance in the supplemental cage, a downwardly opening ever set trap door within said entrance closing the supplemental cage to exit when in normal closed position but operable downwardly to permit access to be had to said supplemental cage, an auxiliary closure for the opening left by said trap door when moved downwardly normally inactive operable by the movement of said trap door to close said opening to exit when said ever set trap door is operated, and a communicating opening between the confining cage and the supplemental cage normally closed by a trap door operable independently from said ever set trap door to leave an unobstructed passage between the cages.



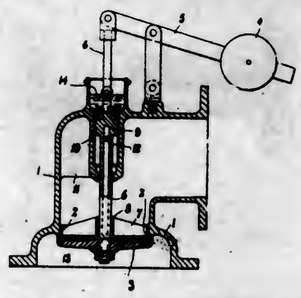
1,347,408. WATER-PUMP-CONTROLLING DEVICE. JOSHUA ROSSINI, Olyphant, Pa. Filed Jan. 7, 1919. Serial No. 270,069. 1 Claim. (Cl. 200—6.)

In a circuit controller for electrically driven pumps for pumping water from the sump in mines, a circuit



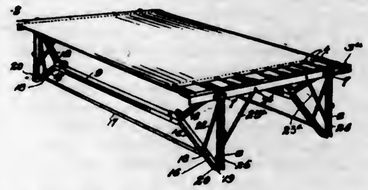
closer embodying a disk like element mounted for rotary movement, electric current conducting strips on one side of said element concentrically disposed with relation to one another, contact strips on the other side of said element concentrically arranged and electrically connected with the first named strips respectively, contact fingers normally in engagement with the first named strips, contact fingers coöperating with the respective last named strips and normally out of engagement therewith, means for holding the last named fingers out of engagement with the conducting strips during the movement of said element in one direction, means for actuating said fingers into engagement with the respective strips in the reverse movement of said element, and means controlling the movement of said element.

1,347,409. HEADLIGHT ATTACHMENT FOR VEHICLES. CECIL BLIGHT ROWE and JAMES LAVERCOMBE, Castlemaine, Victoria, Australia. Filed Dec. 3, 1917. Serial No. 205,168. 2 Claims. (Cl. 240—62.)



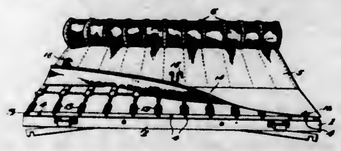
1. In dirigible headlights for vehicles that embody steering mechanism, rotatable headlight supporting socket members connected together to rotate or turn in unison, a member-rotating connection between the steering mechanism and one of said socket members embodying a relatively freely movable spindle received in said socket member, a bolt projecting through said socket member, means yieldingly urging said bolt into engagement with said spindle to releasably lock said freely movable spindle to rotation with said socket member, and a manually controlled device operative from the driver's seat for withdrawing said bolt from engagement with said spindle against the action of said yielding urging means, said manually controlled device adapted to be secured with said bolt in either operative or inoperative position.

1,347,410. CAP-REMOVER. CORNELIUS J. RYAN, Meriden, Conn. Filed Dec. 6, 1919. Serial No. 342,888. 6 Claims. (Cl. 215—10.)



1. A device of the class described comprising a cap, designed to fit the mouth of the milk bottle, means supported by the cap for engaging and removing the disk from the bottle, and means carried by the cap for separating the disk from the aforementioned means as described.

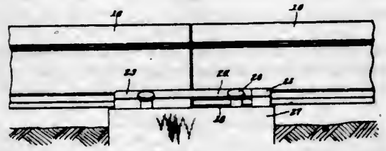
1,347,411. VALVE DEVICE. ARTHUR EDWIN LEIGH SCANES, Ashton-on-Mersey, England, assignor to The British Westinghouse Electric and Manufacturing Company Limited, a Company of Great Britain. Filed Nov. 25, 1918. Serial No. 264,030. 3 Claims. (Cl. 251—147.)



1. In the suction pipe of an air or gas exhausting device, the combination with a non-return valve adapted to be closed by an excess of pressure on the suction or pump side thereof, means adapted to positively close said valve, a cylinder, a piston coöperating therewith, the space in the cylinder on one side of the piston being in communication with the suction pipe on the suction or pump side of the valve, and the space in the cylinder on the other side of said piston being in communication with the atmosphere or a source of pressure above atmospheric, said piston being so connected with the valve as to assist in the opening thereof when the pressure on the suction side of said piston is reduced below that on the other side of said piston.

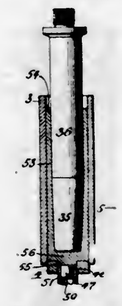
1,347,412. AUTO-PORCH BED. PETER C. SCHAEFER, HORACE D. HULSE, and GEORGE M. LIVINGSTONE, Denver, Colo., assignors to said Peter C. Schaefer. Filed Jan. 20, 1920. Serial No. 352,847. 6 Claims. (Cl. 5—5.)

1. In an apparatus of the class described, the combination of a pair of side structures, each said structure comprising a rail, of primary and auxiliary arms pivotally connected to the ends of said rail, standards pivotally connected to the auxiliary arms, intermediate braces connected to the standards and to the auxiliary arms, an auxiliary side rail connected to the auxiliary arms, and a top structure detachably supported upon the standards and the primary arms.



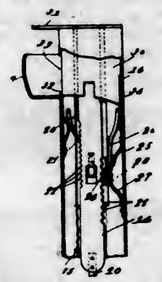
1,347,413. AUTO-PORCH BED. PETER C. SCHAEFER, Denver, Colo. Filed Feb. 26, 1920. Serial No. 361,594. 4 Claims. (Cl. 5—40.)

1. In an apparatus of the class described, the combination of a body having strips attached longitudinally



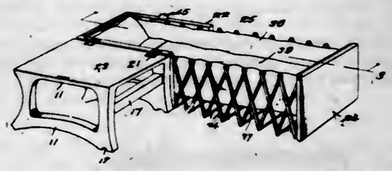
thereto, said body provided at one end with a pocket, a bar in said pocket, said body provided at its other end with said strips extending beyond the end and formed into loops, metal loops in said first-mentioned loops, chains attached to said metal loops, and springs detachably attached to the chains.

1,347,414. RAIL-JOINT. JOHN SEDLAK, Fairchance, Pa. Filed Mar. 14, 1919. Serial No. 282,535. 1 Claim. (Cl. 238—205.)



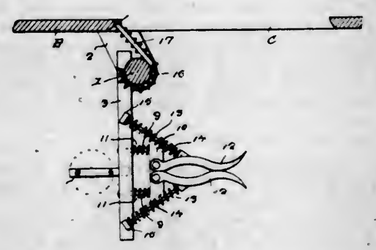
In combination with the meeting ends of two railway rails having their base flanges on one side of their webs provided with spaced slots, and a tie on which the rail ends rest; of a joint plate for each of the rails, including a base member which is arranged upon the under face of the respective rails and which is of a width approximately equaling one half the width of the base flange of the rail, said body plate having on its inner end a lateral extension that terminates in an overlying flange that rests on the base flange of the rail, said plate having its opposite edge also formed with an overlying flange to engage with the base flange of the rail, said flange having a depending lug to be received in the slot of the base flange of the rail and being further provided with an extension providing a tongue that has on its inner face a downwardly extending lug designed to be received in the slot of the coacting rail when the rail ends are assembled, and spikes entering the tie and having their heads contacting with the tongues, and the overlying flanges on which said tongues are formed.

1,347,415. METHOD AND APPARATUS FOR MAKING SHELL-FORGINGS. FRANK A. SHERMAN and JOSEPH M. HALL, Hamilton, Ontario, Canada. Filed Aug. 2, 1918. Serial No. 247,957. 6 Claims. (Cl. 207—6.)



1. An apparatus for making shell forgings comprising a die pot having a tubular wall and a bottom arranged at one end of said wall, said wall being movable lengthwise relatively to said bottom, a mandrel adapted to enter the opposite end of said tubular wall, a base having a central body which carries said bottom and is engaged by the adjacent end of said wall and tubular guide arranged on said body and engaging slidingly with the outer side of said wall, a packing interposed between said guide and wall, and a deflecting flange arranged on the outer side of said wall and overhanging the end of said guide.

1,347,416. DISPENSING-MACHINE. WILLIAM W. STEWART, Leavenworth, Kans. Filed Oct. 14, 1919. Serial No. 330,648. 2 Claims. (Cl. 194—82.)



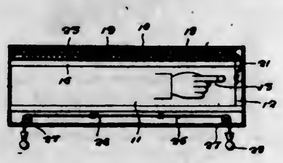
1. A device of the class described comprising a case, a container therein, means for delivering the contents of the container to the outside of the case, a plunger member for actuating said delivering means, said plunger having two sets of rack teeth thereon, the teeth of which are oppositely arranged, a pair of dogs engaging said teeth, a third dog for holding one of the dogs normally out of engagement with the teeth, means for guiding a coin onto said dogs to disengage one dog of the pair from the rack and the the third dog from the other dog to permit the plunger to be raised while preventing it from being lowered and means carried by the plunger for forcing the coin away from the dogs to permit the third dog to again engage the second dog to permit the plunger to be lowered.

1,347,417. COMBINATION FURNITURE. ERNEST EWALD STURK, Tuxedo Park, N. Y. Filed Apr. 18, 1919. Serial No. 291,001. 2 Claims. (Cl. 155—45.)

1. A chair comprising a hollow base, a seat hingedly secured to said base, and adapted to fold out of its operative position to form a table, a removable back for said seat, arms carried by the seat and adapted to act as legs when the same is in its operative position as a table, and an extensible bed mounted in said hollow base.

1,347,418. MAIL CATCHING AND DELIVERING APPARATUS. ADOLPH SUSSLIN, New Orleans, La. Filed Oct. 18, 1919. Serial No. 331,602. 2 Claims. (Cl. 258—11.)

1. A mail bag catching and delivering apparatus comprising a shaft, a pair of arms extending therefrom, a



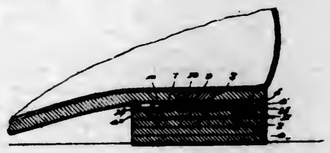
third arm extending therefrom swingingly mounted clips connected to the pair of arms and mail bag catching means supported by the other arm consisting of a pair of jaws, a bar supporting the jaws for pivotal movement toward and away from each other, springs forcing the jaws toward each other, and other springs resiliently opposing movement of the bar.

1,347,419. RECEPTACLE-COVER. AXEL SWENSON, Lyndhurst, N. J. Filed Oct. 8, 1919. Serial No. 329,276. 1 Claim. (Cl. 65—60.)

The combination with a bowl having an interiorly disposed bead defining its open side, a cover provided throughout a portion of its marginal edge with an integral depending flange, a depending flange secured to the under side of said cover and extending parallel to the first-mentioned flange, and spaced therefrom, and a resilient tongue formed by cutting a portion of said last-mentioned flange, said tongue being bent out of alinement with said flange to a position where it will engage beneath the bead of the open side of the bowl when the edge of the open side of the bowl is placed between said flanges.

1,347,420. DIRECTION-SIGNAL. JOSEPH SETARI and LOUIS KOVÁCS, Bellaire, Ohio. Filed Feb. 28, 1920. Serial No. 362,073. 2 Claims. (Cl. 116—50.)

1. A direction signal comprising an elongated casing having a slot at each end, said slots being staggered, a pair of slides arranged one behind the other within the casing, means for normally holding the slides positioned within the casing, upper and lower channel shaped guide members for each slide, the lowermost member of each pair having a longitudinal slot, a pin projecting from the lower edge of each slide and through said slot, flexible elements having their adjacent ends secured to said pins, the bottom of the casing having spaced openings through which the flexible elements are threaded, whereby said slides may be singly projected beyond the ends of the casing, each slide having a hand or indicator thereon.



1,347,421. ELECTRICAL INDICATOR. FRED W. TEMPLE, Kalamazoo, Mich. Filed Sept. 25, 1917. Serial No. 193,093. 8 Claims. (Cl. 177—339.)

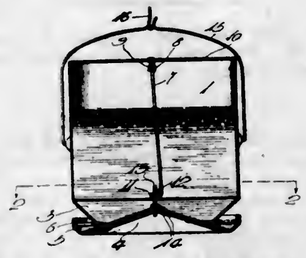
8. The combination with a casing having an apertured front end, of a translucent number plate mounted in said aperture, a block of insulation mounted upon said casing, a door bell circuit comprising an electric door bell and a source of current, an electric light mounted upon said insulation block and normally in series with said door bell, and means for short circuiting said lamp, comprising

a spring contact mounted on said block and means for actuating said spring contact comprising a push button extending through an aperture in said casing.

1,347,422. SHOE-HEEL. ALBERT VANBLOM, Rockford, Ill. Filed Feb. 12, 1919. Serial No. 276,517. 1 Claim. (Cl. 36—42.)

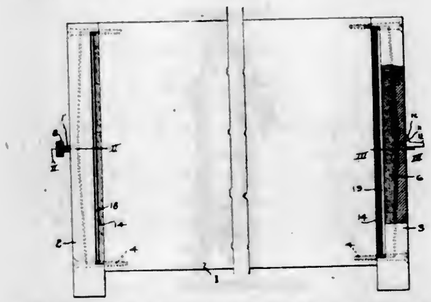
The combination with a shoe, of a stationary riser secured thereto and provided with a recess, and having holes in its lower part communicating with said recess, a rotatable plate pivoted in said recess, projections on the edges of said plate, a heel part, slotted lugs carried thereby and extending through the holes into the recess and a spring carried by the stationary riser and engaging a part of the plate for holding the projections thereon in engagement with the slots in said lugs.

1,347,423. FLASH-LIGHT. JOSEPH VINCE, Brooklyn, N. Y. Filed Sept. 18, 1919. Serial No. 324,431. 24 Claims. (Cl. 240—8.5.)



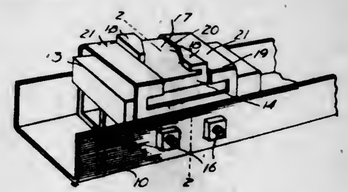
19. An attachment for the battery of a flashlight to be inserted in and removable from the flashlight casing with the insertion and the removal of the battery, said attachment including a conductor element having a length to extend along the battery at the exterior and having means to detachably secure it to the battery, said element being adapted to complete an electric circuit with the battery and lamp.

1,347,424. PROPELLING, TRACTIVE, AND SUPPORTING APPARATUS. TRAJAN VUIA, Garches, France. Filed Mar. 4, 1919. Serial No. 280,678. 2 Claims. (Cl. 170—165.)



1. In propelling, tractive and supporting apparatus such as screw propellers or inclined planes and the like operating in air and water, the combination upon one shaft of two propellers or inclined planes having different pitches such that the incidence or pitch of the propeller or inclined plane on the exit or exhaust side is 75% greater than the incidence or pitch of the propeller on the suction or admission side.

1,347,425. DRINKING-FOUNTAIN AND FEEDER FOR POULTRY. SOLOMON B. WENGER, South English, Iowa. Filed May 17, 1920. Serial No. 381,981. 2 Claims. (Cl. 119—53.)

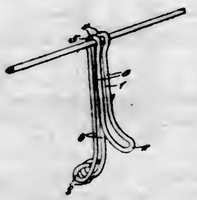


1. A receptacle of the character described comprising an open-ended hopper having its walls converging toward the open end of the receptacle, a rod connected with the head of the hopper for swinging movement and having its free end portion bent to provide a foot having a threaded opening formed therein, a tray having a conical central portion for extending into the open end of the hopper and having its peripheral portion bent to provide a trough extending about the walls of the hopper, a threaded stem in the center of the tray extending into the hopper and through the threaded opening in the foot of the hanger-rod, and means carried by the hopper for supporting the same.

1,347,426. DRAFTING-BOARD. STANLEY E. WILLIAMS, San Francisco, Calif. Filed Aug. 27, 1917. Serial No. 188,354. 5 Claims. (Cl. 45—131.)

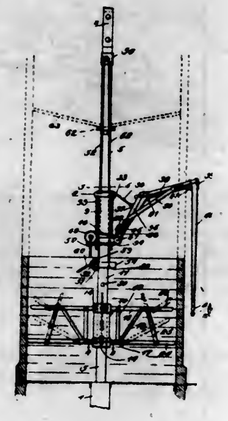
1. A drawing board; end strips fixed to the ends of said board by dowels and having slots between said dowels; paper clamping jaws movable in said strips across said slots and engaging said dowels, whereby the strips are guided in their movement; and adjusting means in said strips engaging said jaws.

1,347,427. RAILROAD-TIE. WILLIAM T. WILSON, Bush, Ill. Filed Oct. 28, 1919. Serial No. 334,039. 3 Claims. (Cl. 238—269.)



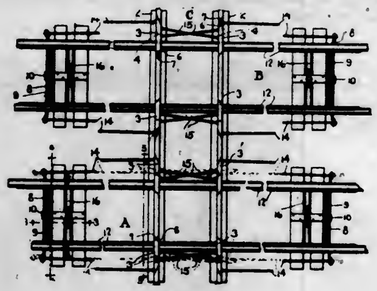
1. A metallic railroad tie comprising a channel-shaped base member, a metallic block fitted in said member adjacent each end, a wooden block disposed upon the metal block, a metallic plate resting upon the wooden block, means for holding all of said parts fixed relatively, and lugs carried by said plate for engagement with the base of the rail.

1,347,428. COOKING UTENSIL. ARNOLD F. WITTEKIND, Trenton, N. J. Filed Apr. 25, 1919. Serial No. 292,550. 1 Claim. (Cl. 53—8.)



A cooking utensil of the character described including, inner and outer receptacles, longitudinally curved lugs attached to the inner side of the inner receptacle and extending upwardly and outwardly and engaging the top of the outer receptacle, and a closure having its peripheral portion engaging the top of said outer receptacle and provided with struck up portions engaging over said lugs, said struck up portions providing recesses in which the lugs are received.

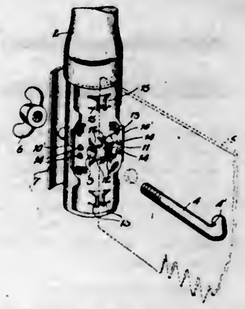
1,347,429. CLOTHESPIN. WILLIAM H. WITT, Petersburg, Va., assignor of one-half to Richard Alexander Titmus, Petersburg, Va. Filed Mar. 22, 1920. Serial No. 367,794. 3 Claims. (Cl. 24—139.)



1. As an article of manufacture, an improved clothes pin constructed from a single length of wire bent upon itself substantially midway its ends to form a clamping loop, the sides of said loop slightly inclined toward each other and being slightly inclined outwardly and laterally at the opposite ends, said outwardly and laterally inclined parts terminating in additional loops constituting clamping jaws, said additional loops being positioned at right angles to the first loop and constituting jaws, the second loops terminating in additional jaws at right angles to the sides of the first clamping loop jaw and being inclined slightly away from each other and the greater part of their length, said additional jaws terminating in eyes, either pair of said jaws constituting means to engage the clothes on the line.

1,347,430. COMBINED SCAFFOLD AND DERRICK. CARL C. YOUNG, Rushville, Ill. Filed Mar. 26, 1919. Serial No. 285,330. 4 Claims. (Cl. 304—12.)

1. In an apparatus for the purpose set forth, the combination of a mast, a carrier mounted thereon for vertical movement and provided with upper and lower annular series of sockets, the upper sockets having overhanging lips, and scaffold supports provided at their inner ends with upper and lower tongues to engage in said sockets and upstanding hooks on the upper tongues to engage behind said overhanging lips.



1,347,431. RAILROAD-CROSSING. CHARLES ALEXANDER ZOBEL, Roanoke, Ala. Filed Jan. 10, 1919, Serial No. 270,534. Renewed Dec. 13, 1919. Serial No. 344,759. 3 Claims. (Cl. 246—376.)

1. A railroad crossing having one track in a higher plane than the other track, said higher track having cut away portions leaving spaces for receiving the lower track, pivoted bridges for said spaces having inclined ends engaging the inclined ends of the rails of the higher track and each having a recess on its under face for receiving the tread of the rail of the lower track and means for operating said bridges by a train on the lower track.

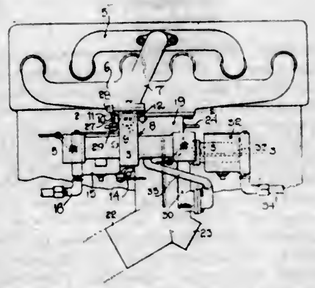
1,347,432. SAW-HANDLE. PERCY C. ABBOTT, Dumbarton, Va., assignor to Hardware Specialty Co., Inc., Richmond, Va., a Corporation of Virginia. Filed Sept. 30, 1918. Serial No. 256,296. 4 Claims. (Cl. 145—109.)

1. A sheet metal butt plate for cross cut saw handles having seating means for the butt end of a saw comprising pairs of struck up tongues, said pairs being spaced apart to provide for the admission of the saw butt longi-

tudinally of the plate and said tongues being located and the ends of the tongues of each pair being spaced so as to admit the passage of a clamp bolt.

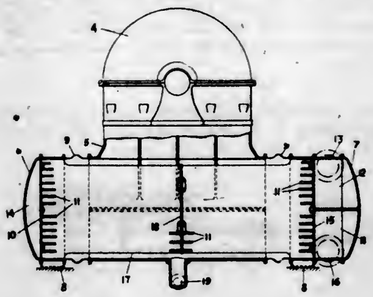
1,347,433. TOY FIREARM. CHARLES L. ALLEN, Pittsburgh, Pa. Filed Feb. 4, 1920. Serial No. 356,169. 3 Claims. (Cl. 124—12.)

1. In a toy firearm, the combination with a firearm barrel having a projectile receiving bore and provided with a projectile receiving chamber above the bore, so that the projectile can enter the bore, spring tensioned means mounted in the barrel for discharging the projectile and a leaf spring having an enlargement protruding into the projectile receiving chamber above the bore, to retain the projectile in position in the bore.



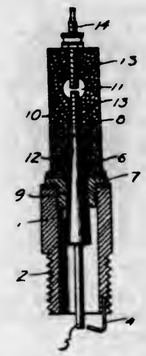
1,347,434. AIR-PUMP. SETH S. AVERY, Pleasant Lake, Ind. Filed Feb. 18, 1919. Serial No. 277,807. 1 Claim. (Cl. 230—27.)

A pump comprising a base, an internal screw-threaded flange projecting from the top face of said base, a pump cylinder having threaded engagement with said flange and having its opposite end open, a hollow pump piston movable in the cylinder, a valve mounted in the piston



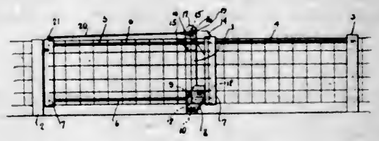
head, an intake opening in the other end of the piston, a collar carried by the open end of the pump cylinder and provided with an outlet passage, said collar having screw-threaded engagement with the first-mentioned collar, and a washer interposed between said collar and the end of the cylinder, said washer forming an air-tight joint between the cylinder and the hollow piston in its movement within the cylinder, substantially as described.

1,347,435. VAPORIZER. JAMIE H. BATCHELOR, Savannah, Ga., assignor to Carl Espy, Savannah, Ga. Filed Oct. 24, 1917. Serial No. 198,296. 6 Claims. (Cl. 123—122.)



1. The combination with a fuel supply connection to the intake manifold of an internal combustion engine and throttle valve, of a casting secured to the exhaust manifold of the engine and having spaced exhaust receiving passages, the wall of one of said passages being provided with an exterior jacket, means for supplying a mixture of fuel and air to the upper end of said jacket, a connection between the lower end of the jacket and the supply connection on the intake manifold, valves to control the passage of the exhaust gases into said passages and to simultaneously open one of said passages when the other is closed, and means for operating said valves in unison with the throttle valve.

1,347,436. CONDENSER. KARL BAUMANN, Urmston, England, assignor to The British Westinghouse Electric and Manufacturing Company, Limited, a Company of Great Britain. Original application filed Jan. 31, 1917, Serial No. 145,706. Divided and this application filed Oct. 2, 1918. Serial No. 256,577. 9 Claims. (Cl. 60—95.)



1. A steam condenser for turbines comprising a horizontal shell adapted to be supported at its central portion by the turbine and at its end portions independently of the turbine and provided with means whereby axial displacement of its central portion with respect to the end portions is permitted.

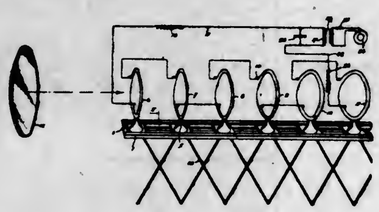
1,347,437. SPARK-PLUG. FLETCHER W. BEALL, Jr., McCalla, Ala. Filed Nov. 25, 1919. Serial No. 340,524. 1 Claim. (Cl. 123—169.)

A spark plug comprising a shell equipped with an electrode, a compression nut, a main electrode having an outwardly tapered portion wrapped with sheet mica and wedged in the compression nut and also having a threaded shank outwardly beyond said tapered portion, a post of fiber opposed at its inner end to the compression nut and having a taper bore receiving the tapered portion of the main electrode and also having a threaded bore receiving and engaging the threaded shank of the main electrode and further having a diametrical opening, and a terminal adjustable in the upper portion of the post and extending into the opening thereof and arranged within said opening in spaced relation to the outer end of the main electrode.

1,347,438. GATE. DAVID E. BENTZEL, York, Pa. Filed Mar. 26, 1920. Serial No. 368,976. 3 Claims. (Cl. 39—48.)

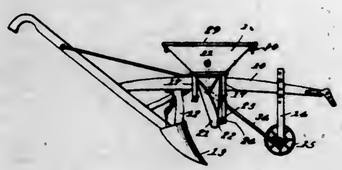
1. In combination with the gate post and the post of a fence, a rod connecting one of the gate posts with said fence post, a gate comprising cross bars and upright members, a casing secured to the rear part of the gate, a casing secured to the gate post, a pair of diagonally arranged rollers in each casing, one pair engaging the rod and the other pair engaging a bar of the gate and means for adjusting the rollers in relation to the bar and rod.

1,347,439. TIRE-CASING SEAL. GEORGE H. BUDD, Salt Lake City, Utah. Filed May 23, 1918, Serial No. 236,150. Renewed Dec. 13, 1919. Serial No. 344,760. 2 Claims. (Cl. 152—13.)



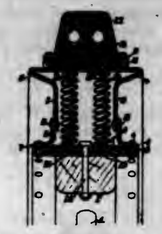
1. In combination with a channeled wheel rim, a tire casing on said rim, and means for inflating said casing; an air seal for said casing comprising a one piece elastic ring of soft rubber located between the beads of the casing and of sufficient elasticity to stretch over the rim flange when applying and removing, said ring having a relatively narrow rim engaging side, a pair of opposed edges diverging outwardly from said rim engaging side, and a peripheral side curved transversely on substantially

the same curvature as the cross sectional contour of the casing, said edges and said peripheral side converging



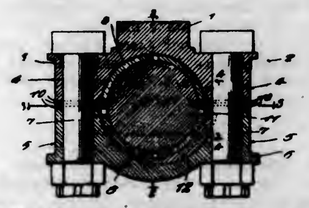
gradually outward and forming thin feather-edged flaps contacting snugly with the side walls of the casing and yieldable freely therewith.

1,347,440. APPARATUS FOR PROPAGATING AND INTENSIFYING ELECTRICAL OSCILLATIONS. JOHN J. CALLAGHAN, Livermore, Calif., assignor to Henry J. Callaghan, Livermore, Calif. Filed Nov. 11, 1918. Serial No. 261,995. 7 Claims. (Cl. 250—11.)



1. A wireless apparatus comprising a plurality of identical coils arranged with their axes in line, means for exciting said coils, and a reflecting surface arranged with its axis coincident with the axis of said coils.

1,347,441. PLANTER. MARION N. CARLISLE, Appleby, Tex. Filed Sept. 20, 1919. Serial No. 325,054. 2 Claims. (Cl. 111—71.)



2. A planter having a beam carrying a stop or standard for a covering shovel, a seed box provided with an outlet, an adjustable slide for regulating the opening of the outlet, an agitator having a rock shaft mounted in the seed box, a ground or pilot wheel operatively connected with said rock shaft for imparting agitating movement thereto, a seed chute in communication at its upper end with said seed box outlet, and movable at its lower end toward and from the vertical plane of the beam, a bracket carried by the beam for supporting the outlet end of the seed chute, and means for adjustably connecting the outlet end of the seed chute to said bracket to regulate the distance between said outlet and the vertical plane of the plow beam.

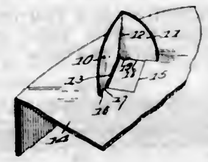
1,347,442. RESILIENT WHEEL. THOMAS T. CHALONER, New York, N. Y. Filed Sept. 27, 1917, Serial No. 193,574. Renewed Feb. 4, 1920. Serial No. 356,121. 3 Claims. (Cl. 152—8.)

3. A resilient tire divided into sections comprising a plate divided into a plurality of independent sections, a band fitted against the outer face of said plate; said band being divided into the same number of sections as said plate, securing means extending through said plate and through said band for clamping the band in position, said band having a pair of spaced outstanding flanges, a casing divided into the same number of sections as said plate rigidly secured to said outstanding flanges, said casing extending outwardly and formed with a pair of resilient sections substantially V-shaped in cross section, said sections being joined by a rim, means on said rim for securing a tire thereto, a plurality of springs arranged in said casing for resiliently holding said casing in a predetermined position, and means for removably securing each of said sections to the felly of a wheel.

1,347,443. AUTOMATICALLY-ADJUSTABLE BEARING. THOMAS CHRISTIANI, Sarles, N. D. Filed Apr. 3, 1919. Serial No. 287,208. 4 Claims. (Cl. 64—55.)

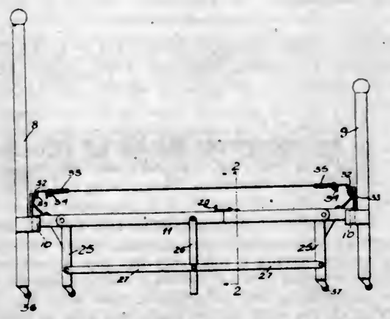
3. A bearing including two halves having a shaft opening there between and bolt means connecting the halves, two bushing halves in said shaft opening, circumferential flanges extending outwardly from the sides of the bushing halves, wear take-up means including a curved wedge member disposed between one of the bushing halves and the adjacent bearing half and between said flanges and spring means for moving the wedge circumferentially to take up wear.

1,347,444. PNEUMATIC MOTOR. HANS R. CHRISTIANSEN, Brooklyn, N. Y. Filed Sept. 21, 1917. Serial No. 192,523. 5 Claims. (Cl. 121—164.)



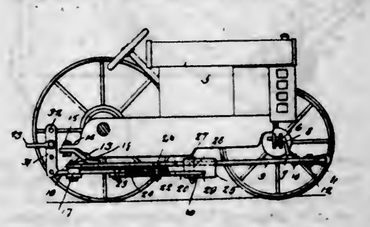
1. A compressed air motor comprising a cylinder, a reciprocatory piston working therein, an automatic air controlling slide valve, a piston rod extending from said piston through a head of the cylinder, means including tappets for varying the stroke of the piston and means whereby said tappets may be simultaneously adjusted to vary the stroke during the operation of the motor.

1,347,445. PERFORATING-MACHINE FOR BANK-DRAFTS AND OTHER DOCUMENTS. GAETANO ARTURO CROCCO, Rome, Italy. Filed Apr. 15, 1920. Serial No. 374,209. 2 Claims. (Cl. 101—19.)



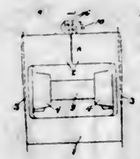
1. In a perforating machine, a drum for operating the perforating pins having peripheral projections and recesses, said drum being formed of a plurality of thin disks.

1,347,446. RECEPTACLE-CLOSURE. CLARENCE E. DOYLE, Washington, D. C., assignor to Hutchinson Egg-Case Filler Company, Hutchinson, Kans. Filed Feb. 4, 1920. Serial No. 356,273. 8 Claims. (Cl. 221—11.)



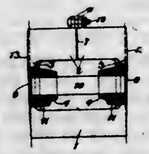
1. A convertible closure and spout for receptacles having angularly disposed cover and guide wings, of which the former is adapted to be hingedly seated at one edge on a receptacle wall adjacent to an opening therein, and wall penetrating extensions on the seated edge of the cover wing for contact with the inner surface of the penetrated wall respectively in the closed and open positions of the cover wing.

1,347,447. FOLDING ATTACHMENT FOR BEDS. FRANK EBERL, New York, N. Y. Filed Oct. 29, 1917. Serial No. 198,965. 2 Claims. (Cl. 5—9.)



1. A foldable spring-bed unit for interposition between and engagement, of itself, with head and foot sections, comprising corner members having vertical tongues at their outer ends to seat in sockets of head and foot sections, a vertically-foldable leg-supported frame portion arranged between and hinged to the corner members at the ends of the unit, upright longitudinal brackets fixed with respect to and rising from the corner members, and a mattress-supporting spring interposed between and connected to the upper portions of said brackets; the said brackets being arranged in superimposed relation to the corner members and extending longitudinally above the tongues to bear on the socket members of head and foot sections.

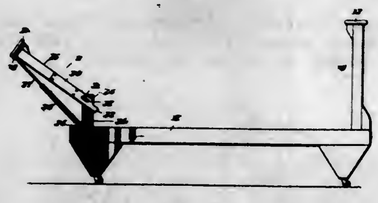
1,347,448. DRAFT-RIGGING FOR TRACTORS. DANIEL W. EVANS, Scranton, Pa. Filed July 26, 1919. Serial No. 313,489. 10 Claims. (Cl. 213—67.)



1. In a draft rigging for tractors, a draft beam, a bracket connecting the draft beam at one end to an axle, means for connecting the opposite end of the draft beam to a tractor frame, said draft beam having apertures therein, a block secured on the draft beam, a draw bar pivotally connected to the block, a coupling member on one end of the draft beam, and a coupling member on the end of the draw bar.

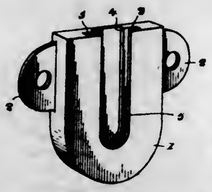
1,347,449. PROCESS OF MAKING PISTONS. JOHN FLAMMANG, St. Louis, Mo., assignor to Ottmar G. Stark, St. Louis, Mo. Filed Feb. 27, 1918. Serial No. 219,363. 7 Claims. (Cl. 29—148.)

1. The process of making a piston which consists in dividing the upper portion of the piston body into segmental sections; drawing the segmental sections toward each other; and forming the exterior periphery of the segmental sections in cylindrical form while the said sections are held drawn together.



1,347,450. PROCESS OF MAKING PISTONS. JOHN FLAMMANG, St. Louis, Mo., assignor to Ottmar G. Stark, St. Louis, Mo. Filed May 23, 1918. Serial No. 236,189. 9 Claims. (Cl. 29—148.)

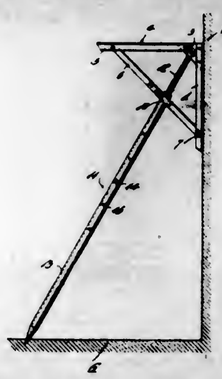
1. The process of making a piston which consists in forming a piston body with an upper ring and a lower ring which are integrally united; splitting the upper



ring to form segmental sections; expanding the upper portion of the piston body; treating the piston body to set the material in its expanded shape; compressing the expanded portion of the piston body; and finishing the same while under compression.

1,347,451. COMBINED CRADLE AND BED. MICHAEL F. FLIS, Mohawk, Ontario, Canada. Filed Apr. 29, 1918. Serial No. 231,446. 1 Claim. (Cl. 5—56.)

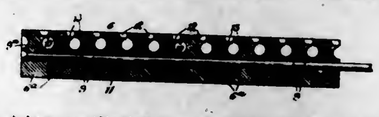
In a bedstead, a head board, comprising a fixed section and a movable section which normally rests directly on the fixed section, slotted plates on the ends of the movable section disposed in contacting engagement with the ends of the fixed section, said plates having their outer ends reduced and formed with tongues, pins on the fixed section passing through the slots of the plates, other pins on the fixed section designed to be engaged by the tongues of the plates for holding the movable section in vertical alinement with the fixed section, telescopic members, one hingedly connected to the fixed section and the other hingedly connected to the movable section, and said telescopic members having a contacting engagement with each other for limiting the outward swinging of the movable section with respect to the fixed section when the tongues of the plates have been brought out of engagement with the last mentioned pins on the fixed section.



1,347,452. CHECK-POCKET. FRANK C. FRANZEN, Buxton, Iowa. Filed Dec. 7, 1917. Serial No. 206,111. 1 Claim. (Cl. 40—10.)

A check receiving pocket for miners' cars, comprising a body, a lug on each side thereof having an aperture therein, said body having a slot in its front part extending from the upper edge to a point an appreciable distance from the lower edge and a groove formed in the walls of the slot intermediate their ends, the lower walls of the slot and groove being rounded and said body having an opening in its lower end which connects with the bottom of the groove.

1,347,453. FOLDING SCAFFOLD-BRACKET. KARL GARNER, St. Marys, Pa. Filed Sept. 8, 1919. Serial No. 322,334. 2 Claims. (Cl. 304—11.)



1. A device of the class described comprising a plate, an upright bar secured at its upper end to said plate, a horizontal supporting arm pivoted at one end to said plate, a diagonal brace pivoted at one end to the other end of said arm, means for detachably connecting the lower end of said brace to the lower end of said bar, a diagonal prop pivoted at its upper end to said plate and crossing said brace at the intermediate portion of the same, and a hook-shaped keeper secured to the intermediate portion of said brace and adapted to be hooked around said prop.

1,347,454. WRITING AND ENGROSSING INK. EMIL GOODWIATH, St. Louis, Mo. Filed Jan. 12, 1920. Serial No. 350,959. 2 Claims. (Cl. 134—37.)

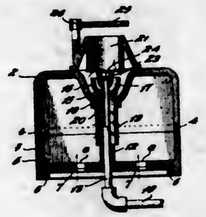
1. A soluble ink composition consisting of soluble blue, a mild alkali and a dye assisting agent.

1,347,455. COMPRESSION-BOX FOR OIL-PRESSES. MICHAEL B. GREEN, Memphis, Tenn. Filed Oct. 17, 1919. Serial No. 331,342. 5 Claims. (Cl. 100—54.)

5. A bar constituting a longitudinal side bar in the construction of compression boxes for oil presses, having grooves in the side faces to form escape passages with the grooved part of the outer face of the bar closed at the ends and the groove on the inner face of the bar open at the ends and with the top of the bar overhanging the grooves, said overhanging portions having lateral slits extending from the top surface of the bar into the grooves with each groove entered by a plurality of said slits, and lateral recesses formed in the under surfaces of the overhangs with each recess extending on opposite sides of a corresponding slit in communication therewith throughout the length of the recess, whereby to provide enlarged drainage area between a slit and the groove into which it empties.

1,347,456. COMPRESSION-BOX FOR OIL-PRESSES. MICHAEL B. GREEN, Memphis, Tenn. Filed Dec. 3, 1919. Serial No. 342,113. 7 Claims. (Cl. 100—54.)

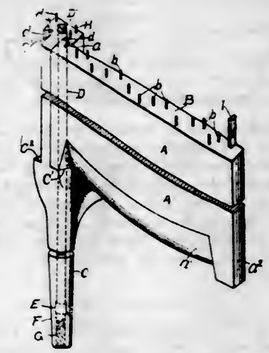
3. An element of a compression box for oil presses, comprising an elongated bar of substantially rectangular cross section having a relatively flat top, a longitudinal centrally-disposed web on its lower surface, spaced cross webs intersecting the longitudinal web with the lower edges of all the webs in one plane, the side walls of the longitudinal web between the cross webs being formed with series of spaced grooves rising along the sides of the central web and merging into the under surface of the top portion to the outer edges of said top portion and



the lower portion of the central web having transverse openings therethrough constituting passages, and the grooves in the under surface of the upper portion of the bar having slits extending through the top surface of the bar and from the outer edge of the bar toward the central portion thereof, said slits being arranged in groups on opposite sides of the bar with the slits on one side of the bar alternating with those on the other side thereof, and all the groups of slits on the same side of the bar being closer to one cross web than to the neighboring cross web between which the group of slits is located.

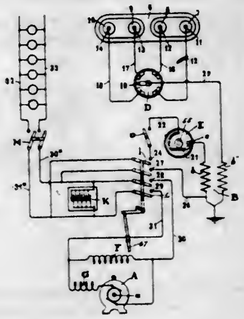
1,347,457. FEEDING POLYPHASE-CURRENT CIRCUITS WITH MONOPHASE CURRENT. HERBERT GUTZWILLER, Schönenwerd, Switzerland, assignor of one-half to Theophil Buess, Liestal, Switzerland. Filed Aug. 5, 1918. Serial No. 248,445. 2 Claims. (Cl. 172—238.)

1. The combination with a monophase current feeding circuit, of a receiving circuit having n-phase conductors, where n is odd and a current divider interconnecting said circuits and arranged so as to separate the successive positive and negative half waves of the primary monophase current and to alternately distribute the same over the n-phase conductors of the receiving circuit, so that in each of the n-phase conductors thereof there flows a partial alternate current which in the same time has n times less half waves than the primary monophase current, substantially as described.



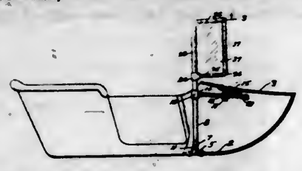
1,347,458. OIL-BURNER. CHARLES E. GREEN, St. Augustine, Fla. Filed June 24, 1919. Serial No. 306,504. 8 Claims. (Cl. 158—91.)

1. An oil burner comprising an air chamber having two sections, one forming the top and one forming the bottom, the lower section having a perforated bottom; an air regulator adjustably mounted on the bottom to control the admission of air into the chamber through the perforated bottom; an oil feed pipe extending up into the chamber; a basin with an open bottom surrounding the upper end of the feed pipe; a baffle mounted on the upper end of the feed pipe and spaced from the inner surface of the basin; and a combustion or fire box above the upper end of the feed pipe; and an adapter adjustable to the discharge end of the feed pipe to adapt the burner to the combustion of a given grade of oil.



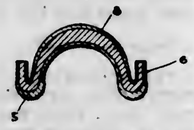
1,347,459. PROCESS OF INSTALLING WATER-FRONT WALLS. EDGAR K. HAND, Chicago, Ill., assignor of one-third to Charles Turner Brown, Chicago, Ill. Filed Sept. 2, 1919. Serial No. 321,164. 1 Claim. (Cl. 61—39.)

The process of grouting wells between bodies of concrete, said wells having water therein, and making said grouting integral with said bodies, which comprises the substantial sealing of the walls of said wells, the expulsion, by means of air under pressure, of substantially all of the water in said wells, the conveying to and discharging thereinto and near the lower ends of said wells,



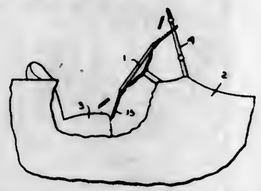
a mixture of air and dehydrated grouting, under pressure sufficient to direct said grouting to said lower ends, subsequently hydrating said grouting, and continuously directing a mixture of air and dehydrated grouting on said continuously advancing grouting in said wells.

1,347,460. MEANS FOR SUPPLYING LIGHTING AND IGNITION CURRENT FOR AUTOMOTIVE VEHICLES. JOHN ALLEN HEANY, Flint, Mich., assignor, by mesne assignments, to Industrial Research Corporation, a Corporation of Delaware. Filed July 27, 1910. Serial No. 574,030. 17 Claims. (Cl. 290—41.)



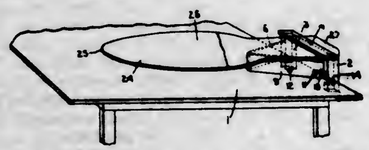
13. In an automotive vehicle, the combination with a variable speed internal combustion engine, of an electrical system comprising a storage battery, translating devices including an ignition system for said engine, including a primary circuit, a secondary circuit, a make and break mechanism for the primary circuit including contacts adapted to be opened and closed, means for effecting an opening of said contacts, means for maintaining said contacts closed for a greater part of the period of the cycle of operation of the make and break mechanism, and a dynamo-electric machine comprising a rotor the rotative speed of which varies with the speed of the engine, and field exciting means connected to inherently control the excitation to maintain an approximately constant voltage in said system independent of speed changes of the dynamo-electric machine when the same is connected in the system.

1,347,461. WINDSHIELD FOR SIDE CARS OF MOTORCYCLES. JAMES E. HELPLING, Los Angeles, Calif. Filed June 11, 1919. Serial No. 303,484. 2 Claims. (Cl. 296—90.)



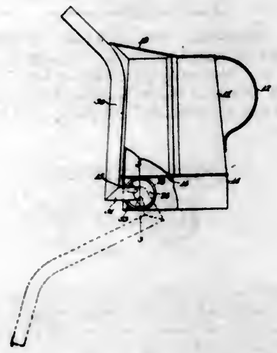
1. A windshield for a motor cycle side car having a bottom and a front hood, comprising posts pivotally connected to the bottom of the car, adjusting bars pivotally connected to the post and extending forwardly below the front hood of the car, means fixed within the hood for holding the bars in an adjusted position, and a windshield fixed to each post above the hood and extending forwardly, the two shields meeting at an angle forwardly of the posts.

1,347,462. OPHTHALMIC MOUNTING. PITT H. HERBERT, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Original application filed Aug. 1, 1917, Serial No. 183,950. Divided and this application filed May 2, 1919. Serial No. 294,214. 4 Claims. (Cl. 88—43.)



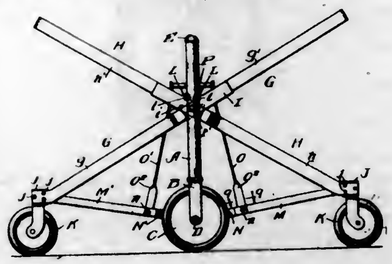
1. A spectacle bridge comprising a central curved portion and enlargements formed at the termini of said curved portion, as and for the purpose set forth.

1,347,463. AUTOMOBILE-LOCK. WINTHROP S. JAMESON, Belmont, Mass. Filed Aug. 16, 1919. Serial No. 317,868. 5 Claims. (Cl. 70—129.)



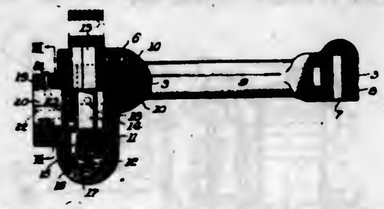
2. An automobile locking device comprising a rigid member having means for locking the same to the wheel of an automobile, said member having an extension of sufficient length to engage the wind shield upon rotation of the steering wheel.

1,347,464. HOLDER FOR SHELVES. THURB A. JOHNSON, Lynn, Mass. Filed Aug. 28, 1919. Serial No. 320,478. 9 Claims. (Cl. 68—10.)



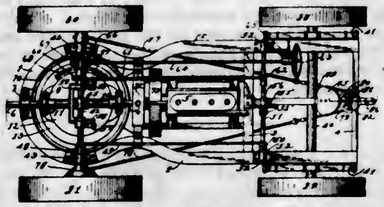
1. A holder for shelves and the like, comprising a stand, means pivotally secured thereto adapted to support a shelf from beneath and means on said stand positioned to engage the shelf from above and hold the same down upon the supporting means.

1,347,465. MEASURE. JESSE DEWEY LEWIS, Los Angeles, Calif., assignor, by direct and mesne assignments, to Scott E. Allen, Hal D. Rives, and Frank Carroll, Los Angeles, Calif. Filed Feb. 3, 1919, Serial No. 274,798. Renewed Jan. 9, 1920. Serial No. 350,478. 2 Claims. (Cl. 221—26.)



1. A measure comprising a can having an opening in the bottom, a valve casing in open communication with said opening, a plate formed on the valve casing, having a discharge opening therein, a felt washer against the said plate having a corresponding opening therein, said felt washer being crimped at its edge within the edge of the plate, a valve disk against said felt washer retained within the edge of the plate, said disk having an opening therein, a spout chamber formed on said disk, and a spout in open communication with said spout chamber.

1,347,466. COLLAPSIBLE CASKET-CARRIER. JOSEPH A. RAYMOND, Chicago, Ill. Filed Sept. 29, 1919. Serial No. 327,122. 5 Claims. (Cl. 280—36.)

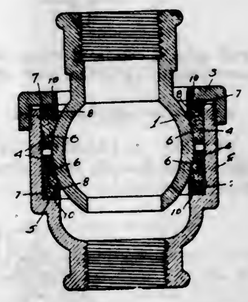


5. In a collapsible carrier, standards, a shaft and an additional shaft joining said standards, wheels rotatably mounted on said shafts, and a frame consisting of caster bases, casters in said bases, bars, one end of said bars attached to said caster bases and the other end of said bars pivotally supported on said adidtional shaft, cradles attached to said pivotally supported end of said bars, and additional bars pivotally attached to said first named bars by pivots extending through said cradles and said additional bars, in combination with a sub frame consisting of bars and a plurality of bars, a handle and vertical bars, said bars pivotally attached to said caster bases, to said plurality of bars and to said vertical bars, and said plurality of bars pivotally supported on said first named shaft, and said handle and vertical bars connected.

1,347,467. TIRE-LOCK. JOSEPH A. SCOTT and JOHNSTON STUART VOIOT, Detroit, Mich., assignors of one-third to Johnston Stuart, Detroit, Mich. Filed Nov. 3, 1919. Serial No. 335,285. 5 Claims. (Cl. 70—17.)

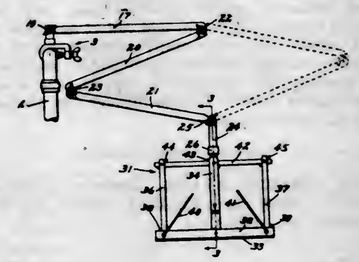
1. A lock of the type described comprising a shackle, a locking bar having one end thereof pivotally connected to one end of said shackle, a socket carried by the opposite end of said locking bar and adapted to receive the other end of said shackle, a lock body carried by said socket, a reciprocable bolt in said lock body adapted to engage the end of the shackle in said socket, and means carried by said lock body adapted to retain said bolt in a retracted position in engagement with the end of said shackle.

1,347,468. TRACTOR. MILLARD E. STOCKWELL, Monrovia, Calif. Filed Mar. 7, 1919. Serial No. 282,480. 3 Claims. (Cl. 180—42.)



1. In a tractor, a frame, a housing rotatable thereon, a driving mechanism including a driving pinion, a pair of spaced gears journaled in said housing and having vertical axes and operated by said pinion, a pair of worm gears axially alined with said gears and operated thereby, a common gear carried on the axle of the vehicle and meshing with both of said worm gears, whereby the operation thereof may be balanced, a tractor frame, and a housing for rotatably supporting said axle and adapted to inclose said gears.

1,347,469. WELL-BORING TOOL. STEVEN TOTH, Los Angeles, Calif. Filed Mar. 11, 1919. Serial No. 281,928. 1 Claim. (Cl. 255—76.)

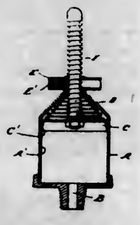


A well boring tool comprising a stock having a hollow bore, a piston mounted in said bore and adapted to slide therein, a plurality of cutting jaws pivoted adjacent the bottom of said stock and adapted to engage with said piston, means for admitting fluid under pressure to said hollow bore and behind said piston, and a spring tension valve in said stock communicating with said hollow bore for automatically relieving the fluid pressure in said bore when said jaws start to contract.

1,347,470. GASKET FOR FLEXIBLE JOINTS. FRANCIS N. BARD, Highland Park, Ill. Filed Aug. 6, 1915. Serial No. 43,996. 1 Claim. (Cl. 285—95.)

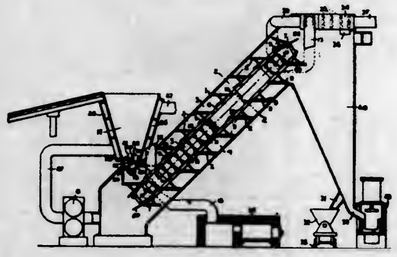
A ball and socket joint comprising a ball, a casing into which said ball is received, a cap for said casing, one or more molded non metallic gaskets within said casing, said gaskets being engaged by said ball, an annular rigid piece having an annular groove extending entirely thereabout and into which the non metallic gasket is molded, the outer and inner faces of said rigid piece being substantially flush with the outer and inner faces of the gasket.

1,347,471. BOOK-HOLDER FOR BEDS, &c. ALFORD A. CONNORS, Universal City, Calif. Filed July 25, 1919. Serial No. 313,356. 3 Claims. (Cl. 45—82.)



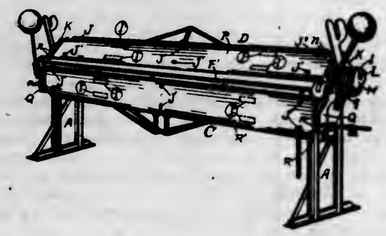
1. A bookholder for beds and the like comprising a clamp adapted to engage the round horizontal head rail of a bed, a swivel upon the clamp having a vertical axis and having a bifurcated upper end, an arm adapted to be clamped within the bifurcated end of the swivel and extending outwardly therefrom, a second arm connected to the first arm by a clamping joint, a third arm connected to the second arm by a clamping joint, and a book frame connected to the third arm by a clamping joint and adapted to hold a book in position to be read by a person lying upon his back upon a bed.

1,347,472. GREASE-CUP. CULLEN D. CORLISS, Detroit, Mich., assignor to Michigan Lubricator Company, Detroit, Mich., a Corporation of Michigan. Filed June 20, 1918. Serial No. 240,914. 2 Claims. (Cl. 184—48.)



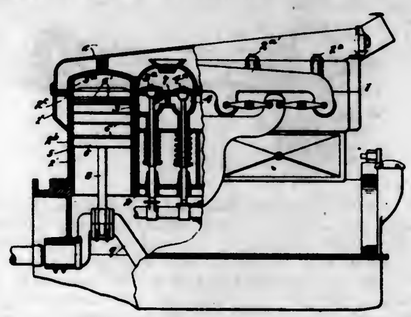
1. In a grease cup, the combination with the cup for the grease, of a resilient metal plunger relatively mov-

able longitudinally thereof, said plunger provided with an integral peripheral knife-edge flange slidably engaging



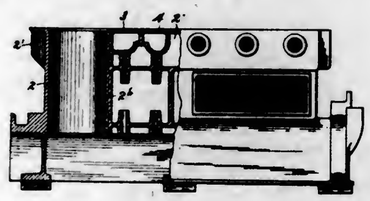
the inner wall of said cup, said flange having a normal outer diameter greater than the inner diameter of said cup.

1,347,473. DRYING APPARATUS. FRED T. DOW, Bangor, Me. Filed Apr. 29, 1919. Serial No. 293,386. 11 Claims. (Cl. 34—12.)



9. In a drying apparatus, the combination with an elongated inclined chamber divided longitudinally into two passages, of an endless conveyer having its runs operating in said passages and comprising a plurality of reticulated carriers constructed to stand in a horizontal position, means to operate said conveyer, said chamber having an opening leading to one end of one passage and beneath which the horizontally-arranged carriers pass successively, means to deliver continuously material to be dried through said opening by gravity, and means to cause a heating medium to pass through the passage containing the loaded carrier.

1,347,474. BENDING-BRAKE. HERMAN C. DEBIS, Chicago, Ill. Filed Sept. 22, 1919. Serial No. 325,439. 7 Claims. (Cl. 153—16.)

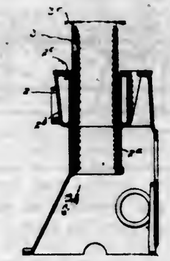


1. In a bending brake, an apron consisting of pivoted end members, in combination with a plate arranged to form a supporting member secured at its ends to said end members, an additional plate member, and means, between the ends thereof, to support said additional member in spaced relation to said supporting member.

1,347,475. INTERNAL-COMBUSTION MOTOR. EDMUND E. ALLYNE, Cleveland, Ohio, assignor to The Aluminum Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 29, 1915. Serial No. 17,656. 7 Claims. (Cl. 123—193.)

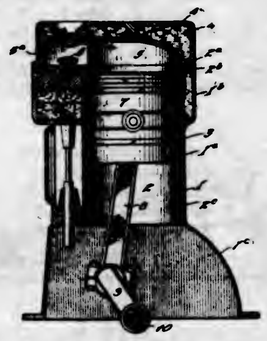
1. A composite internal combustion motor cylinder comprising a casting of metallic alloy having high coefficients of heat conductivity and expansion and low specific gravity, in comparison with iron, and formed with an inner cylindrical wall surrounded by a water jacket and interiorly surfaced concentrically to the axis of said cylinder, and a tubular member constituting a piston-wear-resisting liner for said cylindrical wall, said member being of substantially uniform cross section in any transverse plane to be traversed by the motor piston and having its outer surface snugly fitting the inner cylindrical wall of said casting throughout the length of said liner to be traversed by the piston.

1,347,476. PROCESS OF MAKING CYLINDERS FOR INTERNAL-COMBUSTION ENGINES. EDMUND E. ALLYNE, Cleveland, Ohio, assignor to The Aluminum Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 29, 1915. Serial No. 17,657. 7 Claims. (Cl. 123—193.)



1. The herein described process which consists in casting from a metal having a higher co-efficient of heat conductivity and a softer consistency than iron, a tubular section surrounded by cooling means, forming a tubular liner of iron the walls of which at any cross section are of uniform thickness throughout and then inserting said liner into said tubular section of said casting and causing intimate contact between its exterior relatively hard surface and the relatively soft interior surface of said casting wherever heat is to be transferred through said liner and casting to said cooling means.

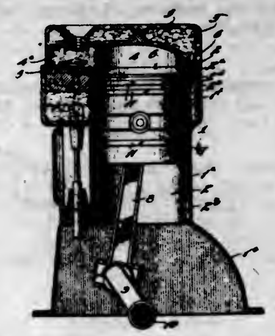
1,347,477. MOTOR-CYLINDER AND PROCESS OF MAKING SAME. EDMUND E. ALLYNE, Cleveland, Ohio, and JOHN WESLEY COLLINS, Detroit, Mich., assignors to The Aluminum Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 12, 1916. Serial No. 103,136. 4 Claims. (Cl. 29—148.)



1. The art of making a composite internal combustion motor cylinder, which consists in pouring molten aluminum

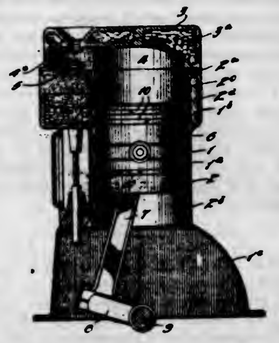
alloy having a low specific gravity and a high coefficient of heat conductivity, in comparison with iron, against a core having cylindrical peripheral parts formed of material with a high coefficient of heat conductivity in comparison with sand, then accurately surfacing the inner

cylindrical chilled wall of the resulting casting, and then inserting a tubular liner, of a shape and size to fit within said cylinder section, in said casting with its outer walls in intimate engagement where desired with said chilled inner cylindrical wall of said casting.



1,347,478. INTERNAL-COMBUSTION-MOTOR CYLINDER. JAMES E. DIAMOND, Cleveland, Ohio, assignor to The Aluminum Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 17, 1916. Serial No. 126,182. 3 Claims. (Cl. 74—108.)

1. A composite internal combustion motor cylinder comprising a casting of metallic alloy having a high coefficient of heat conductivity and formed with an inner cylindrical wall surrounded by a water jacket, and a wear-resisting lining sleeve operatively secured within the said cylindrical wall with a continuous heat insulating space extending between the water jacketed part of the said cylindrical wall and the sleeve.

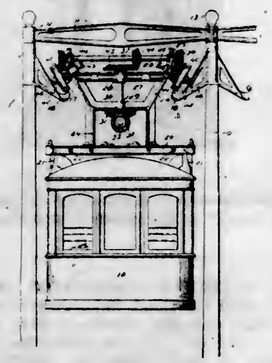


1,347,479. INTERNAL-COMBUSTION MOTOR. ZAY JEFFRIES, East Cleveland, Ohio, assignor to The Aluminum Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 23, 1916, Serial No. 127,152. Renewed Nov. 8, 1919. Serial No. 336,733. 13 Claims. (Cl. 74—108.)

6. A composite cylinder for internal combustion motors comprising a casting with a cylindrical wall surrounded by cooling means and a cylindrical liner secured concentrically within the said cylindrical wall, the liner having its external diameter less than the diameter of the inner wall of the casting to afford a clearance between the liner

and casting adapted to be taken up by the expansion of the liner when heated by the internal combustion within the motor.

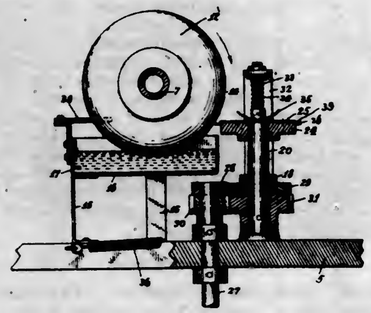
1,347,480. INTERNAL-COMBUSTION MOTOR. ZAY JEFFRIES, East Cleveland, Ohio, assignor to The Aluminum Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 23, 1916, Serial No. 127,153. Renewed Nov. 8, 1919. Serial No. 336,734. 7 Claims. (Cl. 74—108.)



1. In an internal combustion motor, the combination with a composite cylinder comprising an aluminum alloy casting with a cylindrical wall surrounded by cooling means, and a cylindrical liner secured concentrically within the said cylindrical wall, the said liner being made of a metallic alloy having a high coefficient of thermal expansion approximating that of the alloy of the said casting and having its outside diameter less than the diameter of the inner wall of the casting to afford a clearance between the liner and casting adapted to be taken up by the expansion of the liner when heated by the internal combustion within the motor, of an aluminum alloy piston arranged to reciprocate in the liner.

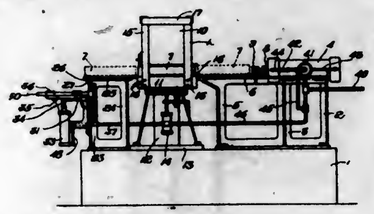
1,347,481. PROCESS OF MAKING CASTINGS. ZAY JEFFRIES, East Cleveland, Ohio, assignor to The Aluminum Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 24, 1917. Serial No. 192,931. 1 Claim. (Cl. 22—188.)

The process of making intricate castings, having shapes with abrupt changes in their cross sectional dimensions, from aluminum alloys or other metals having high coefficients of thermal expansion in comparison with iron, said process being characterized by the introduction of the



molten metal of the character specified into a permanent mold which is formed of metal having substantially the same coefficient of thermal expansion as the metal of the casting and a high coefficient of thermal conductivity in comparison with iron.

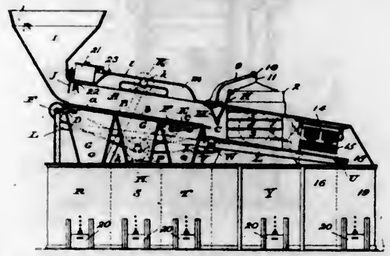
1,347,482. OVERHEAD TRANSIT APPARATUS. OMAR BARTLETT and HARRY FAYER, Lewiston, Idaho. Filed Sept. 24, 1919. Serial No. 325,892. 4 Claims. (Cl. 104—94.)



1. An apparatus of the character described, comprising spaced vertical uprights, track hangers secured to said uprights and having upturned rail supporting ends, track rails carried by said ends, a carrier, brackets on the carrier and having upwardly divergent portions, horizontal and angularly disposed bearings on said upwardly divergent portions, a counter shaft journaled in the horizontal bearings, stub axles carried in the angularly disposed bearings, peripherally grooved traction rollers on said axles and engaging said track rails, gear connections between said shaft and said rollers, and motor driven connections coöperating with said shaft.

1,347,483. NON-CIRCULAR-CAN-COVER-LINING MACHINE. JULIUS BRENZINGER, Fairfield, Conn., assignor to Sanitary Can Machinery Company, Ellsworth, Me., a Corporation of Maine. Filed Aug. 9, 1918. Serial No. 249,105. 12 Claims. (Cl. 113—80.)

1. In a machine of the character described, the combination of a rotating element having a smooth face adapted to receive a liquid coating, means for supporting a can head or cover in edgewise disposition relative to said face, and means for rotating said supporting means, said element and said supporting means being relatively shiftable toward and away from each other during rotation thereof.

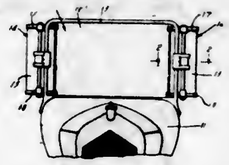


1,347,484. PROCESS OF AND APPARATUS FOR MOLDING CLAY PRODUCTS. DAVIS BROWN, Bucyrus, Ohio, assignor to Raymond C. Penfield, Chicago, Ill. Filed Mar. 13, 1918. Serial No. 222,167. 1 Claim. (Cl. 25—41.)

Apparatus of the kind described for forming clay articles, comprising a mold receiving table, a power actuated cylinder in alinement with said table, jolt ramming mechanism having a vertically removable table normally at rest and in alinement with the mold receiving table, a hopper carried by said vertically reciprocating table and spaced therefrom, and automatic means to actuate said power cylinder and jolt ramming mechanism, whereby an empty mold applied to the mold receiving table will be forced under the hopper and thereupon subjected to jolt ramming action with said hopper to fill the mold, the action of the cylinder forcing said mold into position, being automatically retracted to receive a second empty mold, and the successive action of the cylinder removing the filled mold and positioning the second empty mold under the hopper.

REISSUES.

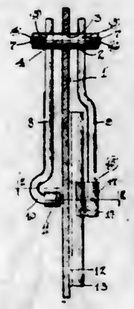
14,917. APPARATUS FOR SORTING HETEROGENEOUS MATERIAL. DANIEL R. BRYAN, Chatham, N. J.; Francis J. Bryan administrator of said Daniel R. Bryan, deceased. Filed Mar. 31, 1917. Serial No. 158,972. Original No. 1,139,484, dated May 18, 1915, Serial No. 837,851, filed May 11, 1914. 19 Claims. (Cl. 83—54.)



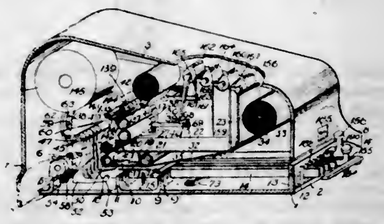
1. In an apparatus for sorting heterogeneous material, the combination of a chute, a casing opening into said chute and having a series of compartments, said compartments having a plurality of inlet openings arranged therein at relatively different heights, a fan located diametrically opposite the said openings, arranged for blowing a blast of air transversely of the material as it passes down the chute for separating paper and light particles from the mass and directing them into the said inlet openings, and means for adjusting said casing relatively to said chute.

14,918. SPRING SUSPENSION FOR VEHICLES. CHARLES DRABEK, Cleveland, Ohio, assignor to The Drabek Equalizer Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 22, 1916. Serial No. 86,015. Original No. 1,119,937, dated Dec. 8, 1914, Serial No. 805,535, filed Dec. 9, 1913. 12 Claims. (Cl. 267—19.)

1. In a vehicle, the combination with two fixed supporting members, of two frame members each pivotally attached at one end to one of said supporting members, two other frame members each pivotally attached at one end to the other of said supporting members, a transverse member connecting said two first-named frame members, a second transverse member connecting said two last-named frame members, connections between said transverse members, and resilient means connecting each of said transverse members to the frame members to which it is already attached, said resilient means being attached to the ends of said frame members.

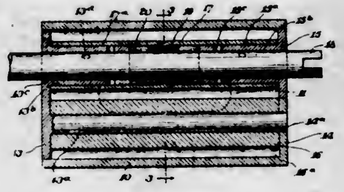


14,919. WINDSHIELD. CLARENCE D. KELLER, Los Angeles, Calif. Filed May 22, 1919. Serial No. 299,030. Original No. 1,284,357, dated Nov. 12, 1918, Serial No. 174,770, filed June 14, 1917. 23 Claims. (Cl. 296—84.)



6. In an auxiliary windshield, the combination of a shield member, a supporting element for the shield member embodying a rod and spaced brackets thereon engaging and supporting the shield member at spaced points of support, and a single adjustable supporting means for the rod engaging and supporting the rod between the spaced brackets.

14,920. WINDSHIELD-CLEANER. LAWRENCE H. MORSE and JAMES J. TRACY, Cleveland, Ohio; said Morse assignor to said Tracy. Filed June 15, 1920. Serial No. 389,483. Original No. 1,339,216, dated May 4, 1920, Serial No. 66,154, filed Dec. 10, 1915. 4 Claims. (Cl. 15—59.)

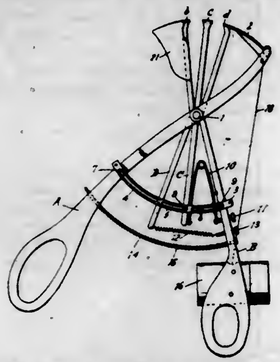


1. A wind-shield cleaner, comprising a bearing fixed transversely of the shield; a spindle loosely held in such bearing; two transversely disposed arms rigidly attached one to each end of said spindle, so as to lie on opposite sides of such shield; and an elongated cleaning element attached to one of said arms so as to be held in approximately parallel relation therewith, the other arm being disposed to movably contact with such shield at a point approximately opposite the middle of said cleaning element, whereby said cleaning element is pressed against such shield, and said spindle being both longitudinally movable in the bearing in said shield and oscillatory in the plane of the device about an axis passing through such point of contact of said other arm with such shield, whereby the pressure of said cleaning element on the shield is at all times automatically maintained uniform throughout the length of said element.

14,921. TELEGRAPH-TRANSMITTER. EDWIN H. PIERSEN, Topeka, Kans., assignor to The Piersen Telegraph Transmitter Company, Topeka, Kans., a Corporation of Kansas. Filed July 28, 1919. Serial No. 313,705. Original No. 1,289,900, dated Dec. 31, 1918, Serial No. 768,473, filed May 19, 1913. 41 Claims. (Cl. 178—17.5.)

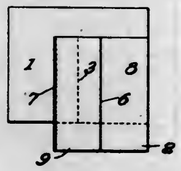
5. A telegraph transmitter comprising paired rollers for guiding and forwarding a character tape, a circuit closer adapted for actuation by said tape, a motor, and differential gearing for driving said rollers from the motor.

14,922. PUMP FOR SPEEDOMETERS. THEODORE C. PROUTY, Hermosa Beach, Calif., assignor, by mesne assignments, to Van Sicklen Speedometer Company, Wilmington, Del., a Corporation of Delaware. Filed May 29, 1920. Serial No. 385,366. Original application filed Mar. 28, 1914, Serial No. 827,911. Renewed Aug. 6, 1917, Serial No. 184,787. Original No. 1,256,829, dated Feb. 19, 1918. 7 Claims. (Cl. 103—44.)



1. In a device of the class described, the combination of rotatable fluid actuating mechanism, bearing mechanism upon which said rotatable mechanism is rotatably mounted, and provided with a concentric axial bore, shaft mechanism extending through and journaled in said axial bore, a collar secured to said shaft and having embedded therein portions of said rotatable fluid actuating mechanism, whereby said rotatable fluid actuating mechanism and said shaft rotate in unison.

14,923. SURGICAL INSTRUMENT. HARRY SMIT, New York, N. Y. Filed Nov. 26, 1919. Serial No. 340,937. Original No. 1,293,565, dated Feb. 4, 1919, Serial No. 256,737, filed Oct. 3, 1918. 28 Claims. (Cl. 128—340.)



1. In a surgical instrument of the character specified, main members pivotally connected, an intermediate piv-

oted member, connecting means between the intermediate member and one of the main members to limit the relative

movement of the members in one direction, and a spring connection between the intermediate member and one of the main members.

14,924. CATAMENIAL BANDAGE. ALBERT T. VAN ALSTYN, Grand Rapids, Mich. Filed June 15, 1920. Serial No. 389,485. Original No. 1,175,090, dated Mar. 14, 1916, Serial No. 859,939, filed Sept. 3, 1914. Reissue No. 14,722, dated Sept. 9, 1919, Serial No. 135,483, filed Dec. 6, 1916. Reissue No. 14,830, dated Mar. 30, 1920, Serial No. 342,564, filed Dec. 4, 1919. 5 Claims. (Cl. 128—290.)

5. A duplex reversible bandage comprehending two connected parts each of single thickness and either of which may be folded a plurality of times to provide a relatively short but thick absorbent pad, said pad being folded within the remaining part, whereby the folded bandage comprises the pad inclosed in a container formed of the remaining part and providing relatively thin attaching ends.

DESIGNS.

55,838. TOY WAGON. EDNA HESTER BADGLEY, Springfield, Mo. Filed Apr. 2, 1920. Serial No. 370,889. Term of patent 7 years.

The ornamental design for a toy wagon, as shown.

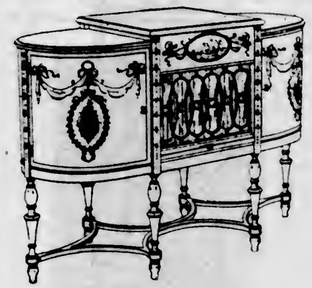
The ornamental design for a statue as shown.

55,873. CASING FOR A DISPENSING APPARATUS. MATTHEW B. MUXEN, Fort Wayne, Ind., assignor to Tokheim Oil Tank and Pump Company, a Corporation of Indiana. Filed Apr. 10, 1919. Serial No. 289,142. Term of patent 14 years.

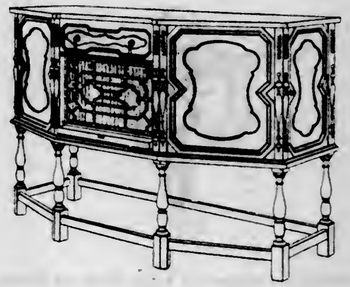


The ornamental design for a casing for a dispensing apparatus as shown.

55,874. CHILD'S VEHICLE. LEO F. NOIROT and OTTO G. NOIROT, Peoria, Ill. Filed Jan. 29, 1920. Serial No. 354,966. Term of patent 7 years.

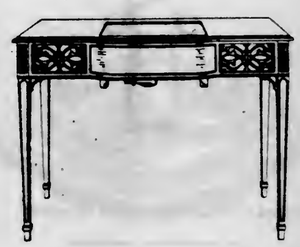
The ornamental design for a child's vehicle as shown.

55,875. PHONOGRAPH-CABINET. HENRY ORSENIGO, Mount Vernon, N. Y. Filed Apr. 10, 1919. Serial No. 289,137. Term of patent 14 years.



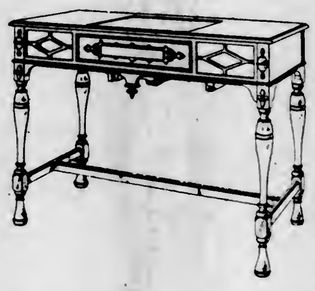
The ornamental design for a phonograph cabinet, as shown.

55,876. PHONOGRAPH-CABINET. HENRY ORSENIGO, Mount Vernon, N. Y. Filed Apr. 10, 1919. Serial No. 289,138. Term of patent 14 years.



The ornamental design for a phonograph cabinet, as shown.

55,877. PHONOGRAPH-CABINET. HENRY ORSENIGO, Mount Vernon, N. Y. Filed Apr. 10, 1919. Serial No. 289,139. Term of patent 14 years.



The ornamental design for a phonograph cabinet, as shown.

55,878. PHONOGRAPH-CABINET. HENRY ORSENIGO, Mount Vernon, N. Y. Filed Dec. 27, 1919. Serial No. 347,876. Term of patent 14 years.

The ornamental design for a phonograph cabinet, as shown.

55,879. PHONOGRAPH-CABINET. HENRY ORSENIGO, Mount Vernon, N. Y. Filed Dec. 27, 1919. Serial No. 347,877. Term of patent 14 years.

The ornamental design for a phonograph cabinet, as shown.

55,880. TOY RATTLE. CHARLES HAMILTON PAJEAU, Evanston, Ill. Filed Apr. 9, 1920. Serial No. 372,678. Term of patent 7 years.

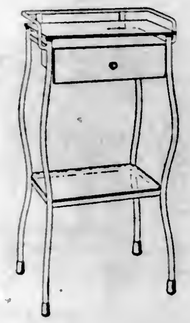
The ornamental design for a toy rattle as shown.

55,881. DOLL. CHARLES HAMILTON PAJEAU, Evanston, Ill. Filed Apr. 9, 1920. Serial No. 372,679. Term of patent 7 years.

The ornamental design for a doll, as shown.

55,882. DOLL. ERNESTO PERUGGI, New York, N. Y. Filed Oct. 20, 1919. Serial No. 332,125. Term of patent 3½ years.

The ornamental design for a doll, as shown.



55,883. DOLL. ERNESTO PERUGGI, New York, N. Y. Filed Oct. 21, 1919. Serial No. 332,815. Term of patent 3½ years.

The ornamental design for a doll, as shown.

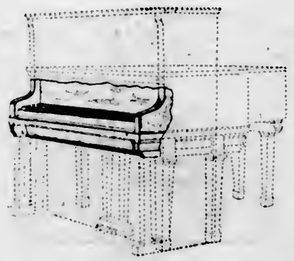
55,884. TABLE. GEORGE POLL, New York, N. Y. Filed Apr. 9, 1920. Serial No. 372,683. Term of patent 7 years.

The ornamental design for a table, as shown.

55,885. CANDY-BOX. ERASMUS COLLINS QUINBY, Los Angeles, Calif. Filed Feb. 16, 1920. Serial No. 359,182. Term of patent 14 years.

The ornamental design for a candy box, as shown.

55,886. TOY FIGURE. FLORENCE K. REYNOLDS, San Francisco, Calif. Filed Feb. 4, 1920. Serial No. 350,237. Term of patent 7 years.

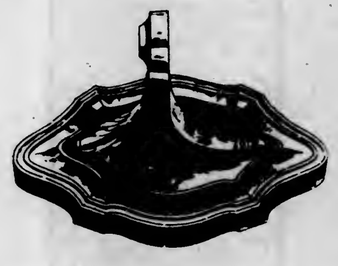


The ornamental design for a toy figure, substantially as shown.

55,887. EMBOSSED WALL-PAPER. WILLIAM F. ROEHLEN, Rochester, N. Y., assignor to Becker, Smith & Page, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 20, 1919. Serial No. 339,446. Term of patent 3½ years.

The ornamental design for embossed wall paper as shown.

55,888. KEY-BED FOR PIANOS. HENRY J. SANDLASS, Forest Park, Md. Filed Mar. 24, 1917. Serial No. 157,276. Term of patent 14 years.



The ornamental design for a key bed for pianos, as shown.

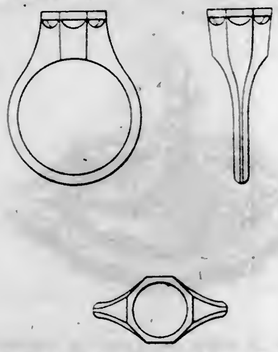
55,889. PLATE FOR LIGHTING-FIXTURES. FREDERICK SCHWARTZ, Brooklyn, N. Y., assignor to Robert Findlay Manufacturing Co., New York, N. Y., a Corporation of New York. Filed Apr. 6, 1920. Serial No. 371,773. Term of patent 7 years.

The ornamental design for a plate for lighting fixtures, as shown.

55,890. PLATE FOR LIGHTING-FIXTURES. FREDERICK SCHWARTZ, Brooklyn, N. Y., assignor to Robert Findlay Manufacturing Co., New York, N. Y., a Corporation of New York. Filed Apr. 6, 1920. Serial No. 371,774. Term of patent 7 years.

The ornamental design for a plate for lighting fixtures, as shown.

55,891. BOTTLE. ERIC SCUDDER and NEIL C. WARD, Chicago, Ill. Filed Jan. 31, 1920. Serial No. 355,437. Term of patent 14 years.



The ornamental design for a bottle as shown.

55,892. BOTTLE. ERIC SCUDDER and NEIL C. WARD, Chicago, Ill. Filed Jan. 31, 1920. Serial No. 355,438. Term of patent 14 years.

The ornamental design for a bottle as shown.

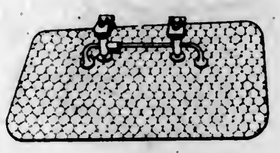
55,893. FINGER-RING. JOSEPH SIMMONS, New York, N. Y. Filed Feb. 3, 1920. Serial No. 355,983. Term of patent 3½ years.

The ornamental design for a finger ring as shown.

55,894. DOLL OR STATUETTE. HOWELL B. SMITH, Nyack, N. Y., KENNETH C. THOMAS, Interlaken, N. J., and ALFRED J. OUELLETTE, Duluth, Minn. Filed Jan. 24, 1920. Serial No. 353,879. Term of patent 3½ years.

The ornamental design for a doll or statuette, as shown.

55,895. DOLL OR STATUETTE. HOWELL B. SMITH, Nyack, N. Y., KENNETH C. THOMAS, Interlaken, N. J., and ALFRED J. OUELLETTE, Duluth, Minn. Filed Jan. 24, 1920. Serial No. 353,880. Term of patent 3½ years.



The ornamental design for a doll or statuette, as shown.

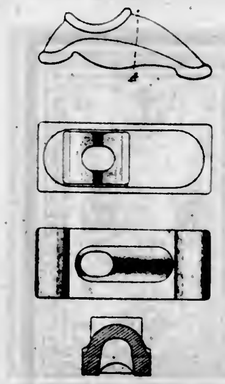
55,896. BADGE, EMBLEM, OR ARTICLE OF SIMILAR NATURE. EDWIN D. STACKHOUSE, Columbus, Ohio. Filed Mar. 15, 1920. Serial No. 366,180. Term of patent 7 years.

The ornamental design for a badge, emblem, or article of similar nature as shown.

55,897. WINDSHIELD. FREDERICK S. TEW, Fort Worth, Tex. Filed Feb. 19, 1920. Serial No. 359,937. Term of patent 3½ years.

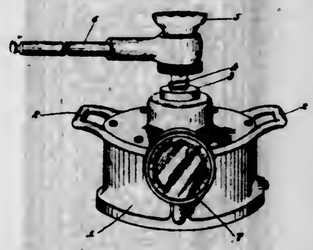
The ornamental design for a windshield, as shown.

55,898. INKSTAND. GUST THOMAS, Fort Sill, Okla. Filed Mar. 20, 1920. Serial No. 367,493. Term of patent 14 years.



The ornamental design for an inkstand, as shown.

55,899. PLATE FOR LIGHTING-FIXTURES. FREDERICK SCHWARTZ, Brooklyn, N. Y., assignor to Robert Findlay Manufacturing Co., New York, N. Y., a Corporation of New York. Filed Apr. 6, 1920. Serial No. 371,775. Term of patent 7 years.



The ornamental design for a plate for lighting fixtures, as shown.

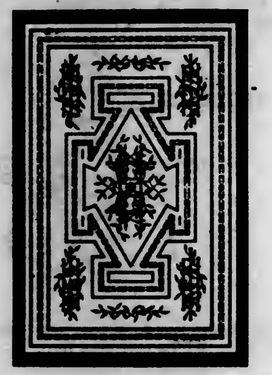
55,900. CLAMPING-DOG. CHARLES RALPH TOWNSEND, Birmingham, England, assignor to The Autoset Clamp Company Limited, Birmingham, England. Filed Mar. 5, 1919. Serial No. 280,866. Term of patent 14 years.

The ornamental design for a clamping dog as shown.

55,901. LOAD-MEASURING DEVICE. FREDERICK J. TROLL, Baltimore County, Md., assignor to The Loadometer Company, Baltimore, Md., a Corporation of Delaware. Filed Apr. 20, 1920. Serial No. 375,401. Term of patent 3½ years.

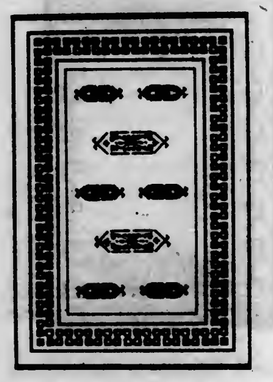
The ornamental design for a load measuring device, substantially as shown and described.

55,902. RUG. ALGERMONT H. WALDO, St. Paul, Minn. Filed Apr. 9, 1920. Serial No. 372,646. Term of patent 3½ years.



The ornamental design for a rug, as shown.

55,903. RUG. ALGERMONT H. WALDO, St. Paul, Minn. Filed Apr. 9, 1920. Serial No. 372,647. Term of patent 3½ years.



The ornamental design for a rug, as shown.

55,904. RUG. ALGERMONT H. WALDO, St. Paul, Minn. Filed Apr. 9, 1920. Serial No. 372,648. Term of patent 3½ years.

The ornamental design for a rug, as shown.

55,905. RUG. ALGERMONT H. WALDO, St. Paul, Minn. Filed Apr. 9, 1920. Serial No. 372,649. Term of patent 3½ years.

The ornamental design for a rug, as shown.

55,906. RUG. ALGERMONT H. WALDO, St. Paul, Minn. Filed Apr. 9, 1920. Serial No. 372,650. Term of patent 3½ years.

The ornamental design for a rug, as shown.

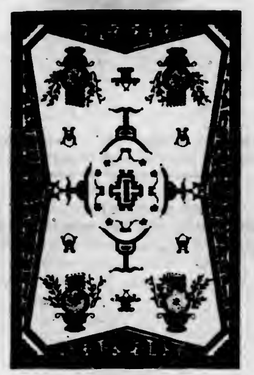
55,907. RUG. ALGERMONT H. WALDO, St. Paul, Minn. Filed Apr. 9, 1920. Serial No. 372,651. Term of patent 3½ years.

The ornamental design for a rug, as shown.

55,908. RUG. ALGERMONT H. WALDO, St. Paul, Minn. Filed Apr. 9, 1920. Serial No. 372,652. Term of patent 3½ years.

The ornamental design for a rug, as shown.

55,909. RUG. ALGERMONT H. WALDO, St. Paul, Minn. Filed Apr. 9, 1920. Serial No. 372,653. Term of patent 3½ years.



The ornamental design for a rug, as shown.

55,910. RUG. ALGERMONT H. WALDO, St. Paul, Minn. Filed Apr. 9, 1920. Serial No. 372,655. Term of patent 3½ years.

The ornamental design for a rug, as shown.

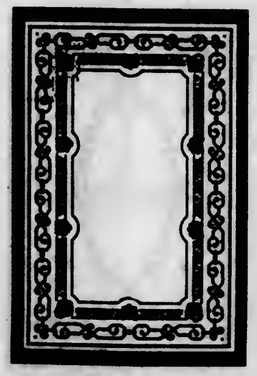
55,911. RUG. ALGERMONT H. WALDO, St. Paul, Minn. Filed Apr. 9, 1920. Serial No. 372,656. Term of patent 3½ years.

The ornamental design for a rug, as shown.

55,912. RUG. ALGERMONT H. WALDO, St. Paul, Minn. Filed Apr. 9, 1920. Serial No. 372,657. Term of patent 3½ years.

The ornamental design for a rug, as shown.

55,913. RUG. ALGERMONT H. WALDO, St. Paul, Minn. Filed Apr. 9, 1920. Serial No. 372,658. Term of patent 3½ years.



The ornamental design for a rug, as shown.

55,914. RUG. ALGERMONT H. WALDO, St. Paul, Minn. Filed Apr. 9, 1920. Serial No. 372,659. Term of patent 3½ years.

The ornamental design for a rug, as shown.

55,915. RUG. ALGERMONT H. WALDO, St. Paul, Minn. Filed Apr. 9, 1920. Serial No. 372,660. Term of patent 3½ years.

The ornamental design for a rug, as shown.

55,916. RUG. ALGERMONT H. WALDO, St. Paul, Minn. Filed Apr. 9, 1920. Serial No. 372,661. Term of patent 3½ years.

The ornamental design for a rug, as shown.

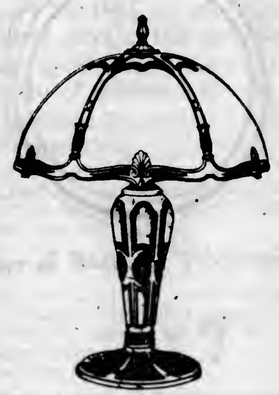
55,917. RUG. ALGERMONT H. WALDO, St. Paul, Minn. Filed Apr. 9, 1920. Serial No. 372,662. Term of patent 3½ years.

The ornamental design for a rug, as shown.

55,918. RUG. ALGERMONT H. WALDO, St. Paul, Minn. Filed Apr. 9, 1920. Serial No. 372,654. Term of patent 3½ years.

The ornamental design for a rug, as shown.

55,919. LAMP. HERMAN H. WOLTER, Meriden, Conn., assignor to Edward Miller & Co., Meriden, Conn., a Corporation of Connecticut. Filed Apr. 9, 1920. Serial No. 372,666. Term of patent 3½ years.



The ornamental design for a lamp substantially as shown.

55,920. TOWER-MONUMENT. BEY A. WISE, Vincennes, Ind. Filed Jan. 10, 1920. Serial No. 350,709. Term of patent 7 years.

The ornamental design for a tower monument as shown.

55,921. LAMP. HERMAN H. WOLTER, Meriden, Conn., assignor to Edward Miller & Co., Meriden, Conn., a Corporation of Connecticut. Filed Apr. 9, 1920. Serial No. 372,665. Term of patent 3½ years.

The ornamental design for a lamp, substantially as shown.

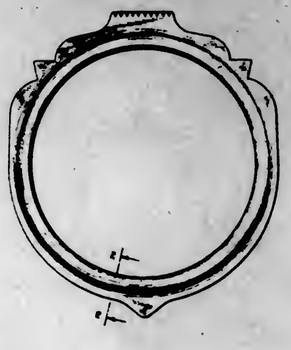
55,922. LAMP. HERMAN H. WOLTER, Meriden, Conn., assignor to Edward Miller & Co., Meriden, Conn., a Corporation of Connecticut. Filed Apr. 9, 1920. Serial No. 372,667. Term of patent 3½ years.

The ornamental design for a lamp, substantially as shown.

55,923. LAMP. HERMAN H. WOLTER, Meriden, Conn., assignor to Edward Miller & Co., Meriden, Conn., a Corporation of Connecticut. Filed Apr. 9, 1920. Serial No. 372,668. Term of patent 3½ years.

The ornamental design for a lamp substantially as shown.

55,924. LAMP. HERMAN H. WOLTER, Meriden, Conn., assignor to Edward Miller & Co., Meriden, Conn., a Corporation of Connecticut. Filed Apr. 9, 1920. Serial No. 372,669. Term of patent 3½ years.



The ornamental design for a lamp substantially as shown.

55,925. SUPPORT. HERMAN H. WOLTER, Meriden, Conn., assignor to Edward Miller & Co., Meriden, Conn., a Corporation of Connecticut. Filed Apr. 9, 1920. Serial No. 372,670. Term of patent 3½ years.

The ornamental design for a support substantially as shown.

55,926. BEZEL. JACOB WILDENBERG, New York, N. Y., assignor to Wildenberg Bros., New York, N. Y., a Firm composed of Joseph Wildenberg, Jacob Wildenberg, and Charles Wildenberg. Filed Apr. 13, 1920. Serial No. 373,562. Term of patent 7 years.

The ornamental design for a bezel, as shown.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

EX PARTE TEALE.

Decided May 1, 1919.

1. PATENTS—PATENTABILITY—ANALOGOUS USE.

The use of a device for separating parts of ground ore is so remote from that of separating the heavier and lighter parts of ground tobacco that the latter might not be suggested by the former.

2. SAME—CLAIMS—TERMINOLOGY—"PROPELLING MEANS."

The objection that an air-draft is not a "propelling mechanism" *Held* to be not well taken, as an air-draft is a well-known propelling means and is recognized as an equivalent of a strictly structural propelling means.

3. SAME—PATENTABILITY—SUBSTITUTION OF EQUIVALENTS.

Where a prior-art patent disclosed a device to produce a shower of tobacco and direct it onto a separating means and another patent disclosed a separator to act on granulated tobacco having elements of different specific gravities in which the tobacco was fed from a hopper onto a rapidly-moving belt, which propelled the tobacco against opposing air-currents, the heavier particles being thrown through the current and the lighter ones being deflected by the current, *Held* that it involved no invention to substitute the shower-producing means of the former for the hopper of the latter combination.

[This application has resulted in Patent No. 1,326,547, dated December 30, 1919.]

APPEAL from Examiners-in-Chief.

TOBACCO-CLEANER.

Mr. Sydney I. Prescott for the applicant.

NEWTON, *Commissioner:*

Appeal is taken from the decision of the Examiners-in-Chief affirming the decision of the Primary Examiner rejecting claims 1 to 4, 6, 7, 21, 22, 23, and 26 to 30, inclusive, of which the following serve as examples:

1. The combination with means for producing a shower of tobacco, of cleaning means including propelling mechanism positioned to intercept and adapted to act upon the shower of tobacco to drive its heavier and lighter parts along different trajectories and thereby effect their separation.

21. The combination with an automatic cigarette machine feed, of cleaning means associated therewith and including propelling mechanism positioned to intercept and adapted to act upon the tobacco within said feed to drive its heavier and lighter parts along different trajectories and thereby effect their separation.

26. The combination with means for producing a shower of cut tobacco leaf, of mechanism positioned to intercept and act upon said shower to separate the heavier and lighter parts of said leaf.

The references cited are: Drummond, 384,565, June 12, 1888; Drummond, 384,566, June 12, 1888; Stuckey *et al.*, 518,082, April 10, 1894; Bonsack, 589,116, August 31, 1897; Raymond, 629,604, July 25, 1899.

The invention is an improvement in devices for cleaning tobacco for use in cigarettes and comprises a chamber containing means for feeding and picking the tobacco to pieces and distributing it in a "shower." In this falling shower is positioned a rotating vaned drum for propelling the tobacco lengthwise of the chamber, the heavier particles including bits of the stems and small lumps of leaf being thrown farthest and into a receptacle, while the lighter particles fall short and onto a moving belt carrying them to a hopper, which may be attached to a cigarette-machine.

Emphasis is laid on the character of the material acted on. It is described as being tobacco-leaf, with a part of the stem left therein, the whole being sliced and shredded into a fineness suitable for cigarettes. By the use of applicant's particular cleaning or propelling means the bits of stems remaining are said to be removed and a preliminary shredding operation obviated. The appealed claims, however, define the material specifically only by the words "cut tobacco leaf."

Most of the claims recite that the tobacco falls in a shower and that the propelling means intercepts and acts on the shower, presumably for proper distribution and separation of the light and heavier particles.

It is noted that sixteen claims have been allowed, covering the general organization of applicant's machine and details, including the specific construction of the propelling mechanism.

The question presented for review is on the patentability of broader definitions of the structure whereby separation of the heavier and lighter parts of the tobacco is secured.

It is concededly old to take cigarette-tobacco more or less in a mass and pick it to pieces and cause it to fall in a shower upon a revolving separating means. Bonsack (figure 7) shows a machine doing this, as applicant admits. He contends, and correctly, that Bonsack's scattering-roll F^5 would not separate bits of stems from small fragments of leaf; but this is clearly due to the character of said roll. Bonsack's roll is described as separating heavy foreign matter, such as nails and stones, from the disintegrated tobacco; but it is also

described as separating and distributing the tobacco by throwing it away from its surface.

The patent to Stuckey and Arthur shows a distributing-wheel very much like applicant's propelling device, for use with ground ore, but the disclosed use in so remote an art as ore concentration might not suggest its use in cleaning tobacco. The applicant is not claiming merely a distributing-wheel.

The Drummond patents show drying means for the tobacco, shredding and breaking means for the stems and portions of leaf attached thereto, and air-draft separating means to carry off the leaf fragments. The material acted on here differs from applicant's material in the different proportions of broken stems and leaf fragments contained in each. One has a large proportion of stem fragments and a small proportion of leaf fragments, being derived from tobacco-leaf waste, while the other is mostly leaf particles, with probably only a small percentage of broken-up stems. The air-draft is in the path of the falling tobacco; but the latter is not, in my opinion, in the form of a "shower."

The applicant objects to an air-draft being considered "mechanism;" but I do not consider the objection well taken. It is a well-known propelling means and is recognized as an equivalent of a strictly structural propelling means.

It is true, as applicant states, that the air-draft of Drummond does not project the stem and leaf fragments along different trajectories; but I do not regard this as important. To move one variety away from the other is equivalent to moving both into different positions so far as a separating action is concerned.

The patent to Raymond is for a separator to act on material having elements of slightly-different specific gravities. Granulated tobacco is given as an example, which has fragments of fiber to be separated from fragments of leaf—a material very similar to applicant's material.

It is fed down a hopper upon a rapidly-moving belt, which propels the material against an opposing air-current, the heavier particles being thrown through the current and the lighter ones being deflected by the current, so that the desired separation follows.

Here there seems to be the same problem applicant faced and an equivalent solution by the selection of means. The material is said to be projected with great velocity and obviously would be shot along different trajectories and the varieties effectively separated, with the air-current omitted. The material is not fed to Raymond's belt in a shower; but the action of the belt would not be changed if it were. Shower-producing means anticipatory to a separating operation are admittedly old, and while the same may be especially advantageous where leaf and fiber fragments in specific proportions are acted on and when applicant's particular propelling means are employed yet in the combinations to which the appealed claims are directed the presence of shower-producing means is not imperative.

Upon carefully examining all the claims in this case it is noted that claims 2 and 3 cover "rotary propelling mechanism," define the function thereof, and include means for producing a shower of tobacco. It is thought this combination, since the reference Stuckey *et al.* is eliminated, is properly patentable. The remainder of the appealed claims are well met in Bonsack, taken with Raymond.

It is noted that claims 16, 17, and 18 are not limited to rotary propelling mechanism. They appear to have been allowed because they include means for collecting one part of the material and delivering the other part to a cigarette-machine; but this involves nothing novel over Bonsack, and I recommend that these claims be rejected by the Primary Examiner when the case is returned to him.

The decision of the Examiners-in-Chief is reversed as to claims 2 and 3 and affirmed as to the remaining claims.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

R. H. MACY & COMPANY *v.* NEW YORK GROCERY COMPANY.

Decided June 2, 1920.

1. TRADE-MARKS—SIMILARITY—"WHITE LILY"—"LILY WHITE."

"White Lily" and "Lily White" are so similar as to be likely to lead to confusion.

2. SAME—SIMILARITY OF GOODS—COFFEE AND TEA.

Registration of the words "White Lily" for coffee canceled in view of the prior use of "Lily White" on tea and other groceries, the goods, although different in themselves, being used for the same purpose.

Mr. E. W. Bradford for the appellant.

Mr. Benj. P. Fishburne for the appellee.

VAN ORSDEL, *J.:*

This is an appeal from the decision of the Commissioner of Patents denying the petition of appellants for cancelation of the trade-mark "White Lily" for coffee, registered by appellee company September 18, 1917. Appellants have used "Lily White" as a trade-mark for tea and a large line of groceries since 1895.

The marks are so similar as to be likely to lead to confusion, and the goods, while different in themselves, are used for the same purpose. The case must, therefore, be reversed upon the authority of *Walter Baker & Co.* v. *Harrison*, (32 App. D. C., 272.)

The decision of the Commissioner of Patents is reversed, and the clerk is directed to certify these proceedings as by law required.

Reversed.

Dissenting opinion by Chief Justice SMYTH:

The single question in this case as I view it is whether coffee and tea possess the same descriptive properties. Both tribunals of the Patent Office held that they do not. If Macy & Company had originated the mark, they undoubtedly would be entitled to the exclusive use of it, because tea and coffee belong to the same general class; but they did not originate it and therefore to succeed they must establish that the articles possess the same descriptive properties. The mere fact that confusion might result or that the goods are used for the same purpose, is immaterial under the statute. It is only when the marks are "appropriated to merchandise of the same descriptive properties," that the matter of probable confusion becomes important. If the fact that they are used for the same purpose is controlling, then the mark could be extended to milk, or lemonade, or even wine and beer, if they were still on the market. They, as coffee and tea, are beverages. Besides, the statute says nothing about the use to which articles are put, and the court should follow the statute.

Tea as it appears in the container to which the mark is applied, is a dried, rolled leaf. Coffee is a dried seed or berry. The appearance, taste, and odor of the articles are markedly different; tea is strongly astringent, coffee is not. The properties by which the one may be described are not the same as those by which the other may be identified.

The fact that in *Walter Baker Co. Case* (32 App. D. C., 272) it was held that cocoa and coffee possessed like descriptive properties, does not establish that tea and coffee do.

I think the Patent Office was right, and hence I dissent.

The decision of the Assistant Commissioner reads as follows:

CLAY, *Assistant Commissioner.*

R. H. Macy & Co. appeal from a ruling of the Examiner of Trade-Mark Interferences refusing the appellant's motion to cancel the registration No. 118,562, September 18, 1917, to the New York Grocery Company, of a mark consisting of the words "White Lily" and the picture of a white lily, for coffee; Macy & Co. having set up and proven previous use of the trade-mark "Lily White" for tea. The Examiner refused to cancel because he held that tea and coffee were not goods of the same descriptive properties and under the circumstances there was no likelihood of confusion.

The registrant appellee, the New York Grocery Company, says in its brief:

"If Macy & Co. had coined or originated the mark as a trade-mark for goods generally sold over grocers' counters and had built up their business about that mark so that purchasers would naturally consider such goods to be the product of Macy & Co., the registrant would concede that they were entitled to wide latitude in determining what fell within the natural expansion of their business; *but such is not the case.* The record in this case shows that as early as 1874 this identical mark was registered for flour and that marks practically identical therewith have since been registered for many articles sold over grocers' counters." (See footnote.)

The case is not without difficulty on account of this fact that Macy & Co. were never entitled to broadly monopolize their mark, as in the case where one originates a new device having no meaning until the trader, by his own usage, gave it a meaning. The case cannot turn solely upon any definite ruling as to whether tea and coffee are goods of the same descriptive properties, for this phrase, "goods of the same descriptive properties" has a very elastic and uncertain meaning, depending, in each case, upon the circumstances.

Section 5 of the trade-mark law refers at first to "goods of the same class"; then, in specifying what marks may be refused registration, it uses the expression "same descriptive properties." Section 13, which provides for cancellation proceedings, uses neither expression, but refers broadly to the question whether the registrant "was *entitled to the use*" of the mark at the date of his application for registration. This, of course, means such exclusive use, of such goods, and in such a way, as would not have illegally interfered with the business of Macy & Co. That is, the registrant's mark should not be canceled unless at the time it applied for registration in 1917, Macy & Co. were another party who had acquired the right to use this mark in this trade. The difficulty in this case, as in many other cases, arises from the uncertainty as to what must be considered to be the trade in question, and the bearing on that question of the scope of Macy & Co.'s previous trade-mark rights. If Macy & Co. had adopted for a particular line of groceries a newly originated trade-mark (such as "Kodak" or "Mazda") I have no doubt they would have had the right to expand the use widely, and to keep other traders from using that mark on any line of goods which the public might be at all likely to suppose to have originated with Macy & Co. Some of the English cases have even gone further than that, and have enjoined a bicycle manufacturer from calling his bicycles by the name "Kodak" at the suit of the owner of the trade-mark "Kodak" for cameras. (*Eastman Co. v. Kodak Bicycle Co.*, 15 Rpts., Pat. Cas., 105.)

This is farther than any of our courts have gone; and it should be noted that in that case the defendant used the name "Kodak" as part of its corporate name, and this would allow this company to cause confusion between it and the plaintiff company. Our courts have, however, clearly indicated that the essential question is whether one dealer has gotten himself in a position where he might palm off his goods as those of another. In *Aunt Jemima's Mills Co.* v. *Rigby & Co.* (247 Fed. Rep., 407) the court dealt with the trade-mark "Aunt Jemima" which had been adopted for flour. It was also the name of the plaintiffs, but it said, "obviously the public, or a large part of it, seeing this trade-mark on a syrup, would conclude that it was made by the complainant; perhaps they might not do so if it were used for flat-irons. In this way the complainant's reputation is put in the hands of the defendants. It will enable them to get the benefit of the complainant's reputation and advertisement," (p. 410.) Of course, the court does not say syrup and flour are goods of the same descriptive properties, and of course there is no possibility of a man's being sold syrup when he wants flour. But the case illustrates the point that a new and original trade-mark must be treated very differently from a trade-mark which is generally old and well known and is only new in the association with a particular goods, such for instance as the word "Star," which has long been used as a trade-mark for hundreds of articles. (It should be noticed that the case of *Lawrence* v. *Dowden Co.*, 178 Fed. Rep., 73, cited by the appellant, and wherein tooth-brushes and clothes-brushes were held goods of the same descriptive properties, was not a trade-mark case at all.)

There are many cases, as *Anglo-American Co.* v. *General Electric Co.* (215 O. G., 325; 43 App. D. C., 385,) where the right of a later trader to apply a known trade-mark to other goods was denied because "their general qualities or characteristics were so nearly identical (with the previous goods) that the vending of each by two rival manufacturers under the same trade-mark would be likely to cause confusion, to the injury of the one first to adopt the mark and to the general public." The question of course was not whether one would purchase a Mazda gas-mantle in the belief that he was purchasing a Mazda electric lamp, but was whether there would be confusion as to the origin of these different articles; that is, whether the purchaser might buy the gas-mantle in the belief that it came from the same source from which he had known the electric lamps to come, whereby the trader in gas-mantles would profit by the reputation of the owner of the Mazda electric lamp trade-mark. In all cases where this principle has been applied I think it will be found that the mark in question was an original mark—one which before was unknown in the meaning it now has. If, for example, the electric-lamp maker's trade-mark had in the last cited case been "Excelsior," I doubt whether he could have prevented the registration of "Excelsior" to another for gas-mantles, because "Excelsior" has an innate meaning, and the public is accustomed to seeing that mark for various articles, and has been educated to make distinctions with respect to it.

In the present case the name or the picture of a lily had, probably because it is the symbol of purity, been previously used by various traders. Among other things, it had been applied to lard, meat, flour, codfish, etc., before Macy & Co. adopted it for anything. Each of these previous traders had a right confined to a more or less narrow field. Macy & Co. had no room to adopt the mark for any very broad field. When they adopted it for pork and beans for instance, they did not thereby acquire the right to extend to canned meat, and when they adopted it for macaroni, they could not expand to flour. They adopted it for oyster-cocktail sauce, chilli sauce, mock-turtle soup, and even clam-chowder, in the face of the previous use and registration for canned codfish. When they adopted it for tea, this was in the face of the use and previous registration of the term "Gold Lily" and the picture of a lily, for tea, (No. 17,547, Feb. 18, 1890.) The real question is then this; when one adopts a well-known and much-used symbol as a trade-mark for particular goods, after other traders have used it for other particular goods of the same general class, how broadly can he claim the right to exclude others from thereafter adopting the symbol for other particular goods of the same general category? Obviously he is not in the same position as one with an invented or origi-

nally preëmpted mark. He is not in a position to complain of the use of the mark by others on any goods whatever which the public might suppose to have originated with him; for he has himself adopted the mark for goods which might well have been supposed to have originated with the previous users. The registrant in his brief very pertinently asks:

"Is it any more within the natural expansion of the business of Macy & Co. to extend the use of this mark to coffee than it is within the natural expansion of the business of any of these other parties? Would a purchaser, seeing a can of White Lily coffee, a can of Lane-Libbey's [White Lily] codfish, a sack of Thornton & Chester's White Lily flour, a can of Dunlevy's White Lily lard and a can of Macy's Lily White tomatoes upon a grocer's shelf be any more justified in concluding the coffee to be Macy's product than he would in concluding it to be the product of one of the other parties named?"

In cases of this sort there seems to be no escape from the necessity of speculating as to what the public would think under the circumstances. It has long been customary with this Office to regard tea and coffee as goods of different descriptive properties, in view of the fact that coffee is generally known to have originated from widely different sources and to be produced by widely different processes, and it has been a general custom to place different marks upon them. If the question were one of possible confusion of goods, there would be no difficulty; but this is a case of possible confusion of reputations, which is another thing. To justify the cancelation prayed for it must be held that in 1917, Macy & Co. had the right to apply their "Lily White" mark to coffee, and moreover, that it was an injury to them when it was applied to coffee and registered by another. The damage to Macy & Co., moreover, must be a damage due to an invasion of their right, and not merely a damage due to the fact that they adopted a mark which was not capable of covering a broad field; evidently not capable of covering everything on the grocer's shelf.

While this mark has been registered over twenty times, not only for canned groceries, but for everything from medicines to hosiery, and from whetstones to gas-engines, (see foot-note,)* and while since the use by Macy & Co began, it has been used apparently without objection for such things as cocoa, (Zechnowitz, No. 118,610;) and while Macy & Co. appear to have used it for tea for twenty odd years, they yet never used it on their coffee, which was one of the principal lines of goods upon which they based their reputation. It is open to question whether Macy & Co. may not by laches have lost the right to object to others using a similar mark on coffee, especially since the registrant, New York Grocery Co., claims to have used the mark some fifteen years and its file shows that there was no opposition to its registration, and furthermore shows that a previous registration of the same mark for coffee (Zechnowitz, No. 80,014, Oct. 25, 1910) was canceled upon the admission of Zechnowitz that the registrant, New York Grocery Co., was the first user. There was apparently no objection by Macy & Co. to the registration for coffee or for cocoa. They themselves apparently have never registered the mark for any beverage whatever.

In view of this showing that Macy & Co. were never entitled to occupy any but a narrow field with their trade-mark "Lily White," and in view of their apparent acquiescence in the well established custom, both in the trade and in this Office, of considering tea and coffee to be goods of different descriptive properties, I can have no hesitancy in sustaining the Examiner and refusing to cancel the mark of the New York Grocery. I have noted the decision of the Court of Appeals of the District of Columbia in the case of *Walter Baker & Co.* v. *Harrison*, (32 App. D. C., 272; 138 O. G., 770, Dec. 22, 1908,) where coffee and cocoa were said to be goods of the same descriptive properties. This Office is of course bound to follow the decisions of that court; but I do not consider that that decision in any way settled the question now before me. In that case the Patent Office had dismissed on demurrer an opposition to registration of a trade-mark for coffee consisting of the picture of a Quaker woman carrying a cup on a waiter, on the ground that coffee was goods not of the same descriptive properties as cocoa, and the opposer had used substantially the same picture for a great many years for cocoa. The court found the marks "substantially the same design" and said it should have been left open to proof, as to whether the goods were so similar as to create confusion. The court was undoubtedly much impressed with the apparent attempt of the applicant for registration to profit by the reputation of the older user. It cited a case in which there was a plain attempt at piracy, Ames & Sons attempting to sell shovels in Australia under the name of "Collins & Co.," who had a well established reputation for edged tools.

The party who later adopted the picture of a Quaker woman for coffee had no reason for doing so except to profit by the reputation of Baker & Co. It was clearly not a case to be dismissed without proofs, particularly when the court was "forced to the conclusion that the appellee had some sinister motive in seeking to register this mark." If, however, the court had had before it a case in which the picture of a Quaker woman carrying a cup on a waiter had been used by others before Baker & Co. adopted it, as a trade-mark, let us say, for tea; and if furthermore it had been a mark which was very common for various goods because of its innate significance; then I am satisfied the decision would have been different. Indeed, in the later case of *Nestlé & Anglo-Swiss Co.* v. *Baker & Co.* (37 App. D. C., 148; 167 O. G., 765,) this court itself drew the distinction between an originator and a copier of a device used as a trade-mark, though it was there discussing the confusion of the marks themselves rather than confusion of the fields occupied by the marks. In short, I am satisfied that the court will determine whether two given lines of goods are "goods of the same class" or "goods of the same descriptive properties," as depending largely upon the scope of the trade-mark right of the previous user, and also upon the innate meaning, or lack of innate meaning, of the trade-mark itself. I conclude that the New York Grocery Company had the right to appropriate its mark "White Lily" for coffee at the time of its application for registration, and therefore affirm the decision of the examiner.

*The registered marks referred to are the following: Lily White W. C. Co., 18,869, Jan. 20, 1891, (washing compound;) Dunlevy & Bro., 20,631, Jan. 26, 1892, (lard;) Pike Mfg. Co., 23,448, Aug. 1, 1893, (whetstones;) Dunlevy & Bro., 40,452, May 26, 1903, (meats;) Thornton & Chester M. Co., 45,938, May 5, 1905, (flour;) F. T. Hopkins, 51,613, Apr. 17, 1906, (face powder—since 1850;) White Lily Washer Co., 56,293, Sept. 4, 1906, (gas-engines;) Lane-Libbey Fishing Co., 73,620, Apr. 27, 1909, (cured codfish;) Townsend & Co., 83,449, Sept. 12, 1911, (hosiery.)

U. S. Circuit Court of Appeals—Seventh Circuit.

MINNEAPOLIS KNITTING WORKS *v.* MARSHALL FIELD & CO.

Decided January 6, 1920.

263 Fed. Rep., 987.

PATENTS—INVENTION—ADAPTATION OF IMPROVEMENT IN CHILD'S WAIST TO INFANT'S BAND.

The adaptation of the inelastic reinforcing-tape with tabs of a child's knitted waist, to which buttons are sewed for the purpose of supporting lower garments, to an infant's band designed to support the napkin, the lower garment appropriate to the infant, *Held* devoid of invention. The Ovenshire patent, No. 800,237, *Held* void.

APPEAL from the District Court of the United States for the Eastern Division of the Northern District of Illinois.

Suit in equity by the Minneapolis Knitting Works against Marshall Field & Co. Decree for defendant, and complainant appeals. Affirmed.

Mr. Frank Parker Davis for the appellant.

Mr. George L. Wilkinson for the appellee.

Before BAKER, MACK, and PAGE, Circuit Judges.

MACK, *Cir. J.:*

This appeal is from a decree dismissing for want of equity, the bill to enjoin infringement of claim 2 of Letters Patent No. 800,237 for improvement in infants' bands or shirts. The decree finds the claim valid, but not infringed.

The claim reads as follows:

A band or shirt comprising a tubular body of elastic knitted fabric provided with shoulder pieces or straps 3 and inelastic strips or tapes 4 extending over said shoulder pieces and diagonally downward over the front and rear of the body to central points near the bottom thereof, and suitable tabs secured at the lower ends of said tapes.

The Letters Patent were issued September 26, 1905, on application filed January 23, 1905. Contemporaneously there were issued Letters Patent No. 800,618 applied for by the same inventor on April 24, 1905. Claim 1 of the patent in suit was introduced into the application therefor by amendment, after its rejection as a claim in the other application, and after the allowance of claim 2 now in suit. They differ only in one respect: that the band or shirt in claim 1 is not limited to a tubular body. In the course of the second application, the claims of which had originally been rejected as not being patentable over the other allowed application, counsel for the applicant stated that—

the novelty of the claims in both cases is not included in the description of the opening in the front of the garment or its omission. The inelastic strips or tapes and the tabs secured to the lower ends of the tapes constitute the novel features of the claims.

The object of the invention in suit, as specified, is to provide an elastic tubular band or garment having means for securing a napkin (diaper) thereto; the inventor, however, expressly states that while he has—

described the invention as applied to an infant's band or shirt, it may, of course, be applied to a shirt designed for use of adults.

The specifications describe the invention consisting of—

generally in a band or shirt having a tubular body of elastic knitted fabric with inelastic tapes or strips extending over the shoulder pieces thereof and extending diagonally downward on the front and back to central points near the bottom of the garment and with inelastic tabs secured to the lower ends of said tapes.

While defendant was notified in 1911 of a claim of infringement of both patents, suit was not commenced until 1917. Though plaintiff may not thereby be chargeable with laches, testimony of defendants' disinterested witnesses, based on memory, should not be deemed untrustworthy, when, in the interim, their old corporate books of account were destroyed as no longer of any perceptible value. Despite some discrepancies in the testimony, we are satisfied that the Fogarty waist was made and sold publicly more than two years prior to the application for the patent in suit, and that, except for the fact that it was a shirt, and not an infant's band, it completely anticipates the alleged invention.

In our judgment there is no invention whatsoever in the adaptation of the inelastic reinforcing-tape with tabs of a knitted child's waist, to which buttons are sewed for the purpose of supporting lower garments, whether that waist be open front or back, or tubular, to the infant's band designed to support the napkin, the lower garment appropriate to the infant. If this were otherwise not clear, it would be apparent from the specifications of the patent in suit, according to which the invention is "of course" applicable to a shirt designed for the use of adults, and therefore necessarily designed for supporting the usual undergarments worn by adults.

While it becomes unnecessary to consider the question of infringement, we do not intend, by affirming the decree dismissing the bill for want of equity, to assent to the finding that defendant could escape the charge of infringement merely by the substitution of an elastic tape so attached as to be decidedly less elastic than the knitted body, or by forming the tab out of a continuation of the tape, instead of by attaching a separate piece of tape.

Decree affirmed.

Court of Appeals of the District of Columbia.

IN RE SCHOLL MANUFACTURING COMPANY, INC.

Decided June 2, 1920.

1. TRADE-MARKS — DESCRIPTIVE REPRESENTATION OF ARCH-SUPPORT.

A mark for instep-supports consisting of a representation of the outline of a shoe broken away at the bottom and disclosing at the portion broken away an arch-support supported by the thumb, index and middle fingers of a hand, *Held* merely descriptive; *Held* also that even if it were permissible to disclaim the representation of the arch-support it would still be descriptive.

2. SAME — REGISTRABILITY — DISCLAIMER OF INTEGRAL PART OF MARK NOT PERMISSIBLE.

Registration of a mark for instep-supports consisting of a representation of the outline of a shoe broken away at the bottom and disclosing at the portion broken away an arch-support supported by the thumb, index and middle fingers of a hand, *Held* not registrable upon disclaimer of the representation of the arch-support, because what is left would not be the mark which had been used and because the remaining part of the mark is also descriptive.

3. SAME—EVIDENCE OF EXTENSIVE USE NOT PERTINENT ON QUESTION OF DESCRIPTIVENESS.

Evidence of extensive use of a mark or that several traders have not heard of its use by others does not tend to prove in the least that it is not descriptive.

Mr. J. H. Milans and *Mr. C. T. Milans* for the appellant.

Mr. T. A. Hostetler for the Commissioner of Patents.

SMYTH, *C. J.:*

Scholl applied to have registered as a trade-mark for instep-supports a drawing of which this is a copy:

He alleged use of the mark from 1912. In the statement accompanying the application he said that he made no claim to the representation of the arch-support. The application was rejected on the ground that the mark was a descriptive device. The trade-mark statute (33 Stat. L., 725, chap. 592, sec. 5) declares that—

no mark which consists merely in words or devices which are descriptive of the goods with which they are used—

shall be registered. The mark of the applicant is a device and is merely descriptive. We agree with the Examiner of Trade-Marks and Designs that it is—

an apt and convenient way of describing the characteristics of the arch support and of the benefits to be derived from using the same, and it would be most natural for other manufacturers to use or want to use the same sort of picture to describe or advertise a similar mark.

The disclaimer does not help the applicant, for two reasons: (1) What would remain after the representation of the arch-support had been removed would not be the mark which he had used on his goods, but only a part of it. It would be a different mark—one that he had not used, and hence he would not be entitled to register it. (*Id.*, sec. 1.) (2) Even if that were not so, the remaining part would "still inform the beholder," as the Assistant Commissioner ruled, "that the goods so marked were supports for the instep," and hence would be descriptive.

It is immaterial that the device has been extensively used by the applicant, or that several traders have not heard of its being used by others, for these things do not tend to prove, even in the least, that it is not descriptive. Being descriptive, the statute forbids its registration.

The decision of the Commissioner of Patents is affirmed.

Affirmed.

Interference Notice.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 25, 1920.

The Stampede Company, Limited, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Eugene A. Tuchschmidt, of 113 and 115 Locust street, St. Louis, Mo., for registration of a trade-mark and trade-mark registered November 18, 1919, No. 127,689, to The Stampede Company, Limited, of St. Paul, Minn., and a notice of such declaration sent by registered mail to The Stampede Company, Limited, at the said address having been returned by the post-office undeliverable, notice is hereby given that unless The Stampede Company, Limited, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

R. F. WHITEHEAD,
First Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 25, 1920.

Louis Robinson, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Brownstein-Louis Company, of 716–722 South Los Angeles street, Los Angeles, Calif., for registration of a trade-mark and trade-mark registered November 27, 1906, No. 57,799, to Louis Robinson, of New York, N. Y., and a notice of such declaration sent by registered mail to said Louis Robinson at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Louis Robinson, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

R. F. WHITEHEAD,
First Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 30, 1920.

Harris Wolf, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Wolfinger Knitting Mills, Walnut and Rose streets, Reading, Pa., for registration of a trade-mark and trade-mark registered March 10, 1891, No. 19,153, to Harris Wolf, Chicago, Ill., and a notice of such declaration sent by registered mail to said Harris Wolf at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Harris Wolf, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

R. F. WHITEHEAD,
First Assistant Commissioner.

ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 20TH DAY OF JULY, 1920.

NOTE.—Arranged in accordance with the first significant character or word of the name. (In accordance with city and telephone directory practice.)

Advertising-frame. F. Newhouse. No. 1,346,969; July 20; v. 276; p. 445.
Aeroplane construction. H. G. Hooper. No. 1,347,040; July 20; v. 276; p. 459.
Air and non-condensable gases, Apparatus for exhausting. A. E. L. Scanes. No. 1,346,980; July 20; v. 276; p. 447.
Aircraft for receiving and delivering mail and merchandise, Apparatus on. E. C. Hanson. No. 1,347,157; July 20; v. 276; p. 481.
Airplane. T. L. Eggleston. No. 1,347,084; July 20; v. 276; p. 468.
Airplane-launching apparatus. L. J. Le Mesurier. No. 1,347,105; July 20; v. 276; p. 471.
Ammonia to nitric acid, Oxidizing. A. Henwood. No. 1,347,158; July 20; v. 276; p. 482.
Ammonia to nitric acid, Oxidizing. A. Henwood. No. 1,347,159; July 20; v. 276; p. 482.
Ammonium chlorid, Method of and apparatus for recovering. M. E. Mueller. No. 1,346,967; July 20; v. 276; p. 445.
Animal-exterminator. J. W. Van Meter. No. 1,347,310; July 20; v. 276; p. 512.
Antifriction-buffer. L. Larsen. No. 1,347,389; July 20; v. 276; p. 527.
Antisetting device. A. M. Griffey. No. 1,346,954; July 20; v. 276; p. 442.
Arbor, Expanding. E. Hottinger. No. 1,346,890; July 20; v. 276; p. 429.
Arbor, Expanding. C. F. Sherman. No. 1,346,917; July 20; v. 276; p. 435.
Arbor-press. K. R. Wilson. No. 1,346,868; July 20; v. 276; p. 425.

Mining machine, Coal-. S. N. Mighell. No. 1,346,906; July 20; v. 276; p. 444.
Mixture, Method and apparatus for producing a combustible. S. G. Brigel. No. 1,346,935; July 20; v. 276; p. 438.
Moisture in solid materials, Method and apparatus for determination of. L. E. McAllister. No. 1,347,106; July 20; v. 276; p. 472.
Mold: *See*—
Block-mold.
Mold action in soils, Composition for artificially inducing. R. W. Parramore. No. 1,347,401; July 20; v. 276; p. 530.
Molds, Making. A. Kuznik. No. 1,347,108; July 20; v. 276; p. 483.
Molding apparatus. H. S. Hanstine. No. 1,347,093; July 20; v. 276; p. 469.
Molding clay products, Process of and apparatus for. D. Brown. No. 1,347,484; July 20; v. 276; p. 546.
Motor: *See*—
Electric impulsion-motor. Oscillating motor.
Internal-combustion motor. Pneumatic motor.
Motor control. W. G. Taylor. No. 1,347,305; July 20; v. 276; p. 511.
Motorcycle-stand. C. B. Tinsley. No. 1,347,355; July 20; v. 276; p. 521.
Motorcycles or tricars, Rear springing device for. E. H. Jenkins. No. 1,347,100; July 20; v. 276; p. 470.
Motorcycles, Windshields for side cars of. J. E. Helpling; No. 1,347,461; July 20; v. 276; p. 542.
Music-leaf clip. P. Van Valkenburg. No. 1,347,135; July 20; v. 276; p. 477.
Necktie, Pneumatic. J. K. Allison. No. 1,347,359; July 20; v. 276; p. 522.
Needle, Crochet-. I. Green. No. 1,347,027; July 20; v. 276; p. 456.
Nest, Hen's. E. L. Fink. No. 1,347,266; July 20; v. 276; p. 503.
Nest, Hen's. A. S. Johnson. No. 1,347,223; July 20; v. 276; p. 494.
Non-skid protector. T. H. Gyton. No. 1,347,368; July 20; v. 276; p. 523.
Nut-lock. A. Petriw and A. Petiak. No. 1,346,975; July 20; v. 276; p. 446.
Nut, Lock-. J. R. Schrader. 1,347,124; July 20; v. 276; p. 475.
Nut-locking device. W. H. Sawtell. No. 1,347,294; July 20; v. 276; p. 509.
Nut-machine. E. Hollings. No. 1,346,889; July 20; v. 276; p. 429.
Object-holder. G. W. Driggs and F. R. Henke. No. 1,346,944; July 20; v. 276; p. 440.
Oil and making same, Substitute for linseed-. R. C. Bone. No. 1,347,074; July 20; v. 276; p. 466.
Oil-burner. C. E. Brown. No. 1,347,007; July 20; v. 276; p. 452.
Oil-burner. C. E. Green. No. 1,347,458; July 20; v. 276; p. 541.
Ophthalmic mounting. A. A. Arnold. No. 1,347,140; July 20; v. 276; p. 478.
Ophthalmic mounting. P. H. Herbert. No. 1,347,462; July 20; v. 276; p. 542.
Ore-separator. J. Hicks. No. 1,346,824; July 20; v. 276; p. 416.
Ore-separator and process, Flotation. R. Gahl. No. 1,346,817; July 20; v. 276; p. 415.
Ore-separator, Flotation. R. Gahl. No. 1,346,818; July 20; v. 276; p. 415.
Orthodontia appliance, Locking means for. F. T. Murlless, Jr. No. 1,347,285; July 20; v. 276; p. 507.
Oscillating motor, Double-coil. L. O. Crenshaw. No. 1,347,209; July 20; v. 276; p. 491.
Ovens, Valve for coke-. W. E. Roberts. No. 1,347,056; July 20; v. 276; p. 462.
Overhead transit apparatus. O. Bartlett and H. Fryer. No. 1,347,482; July 20; v. 276; p. 546.
Packing, Lubricating-. H. A. Lacerda. No. 1,347,388; July 20; v. 276; p. 527.
Packing, Piston-. M. P. Bloom. No. 1,346,806; July 20; v. 276; p. 413.
Pails, Guard for metal. J. C. Wright. No. 1,347,357; July 20; v. 276; p. 521.
Paint. G. C. Watson. No. 1,347,311; July 20; v. 276; p. 512.
Paint composition. K. Koivisto. No. 1,347,387; July 20; v. 276; p. 527.
Paint for leather, Composition. J. Richard. No. 1,346,846; July 20; v. 276; p. 420.
Paint-pigment, Mineral. N. A. Thompson. No. 1,347,191; July 20; v. 276; p. 488.
Paintings, maps, wall-papers with relievo-patterns, Manufacturing reproductions of. H. Bogaerts. No. 1,346,807; July 20; v. 276; p. 413.
Pan-lifter. R. J. Garison. No. 1,346,820; July 20; v. 276; p. 415.
Paper bag. F. R. Skinner. No. 1,346,852; July 20; v. 276; p. 421.
Paper receptacle. J. W. Upp. No. 1,347,309; July 20; v. 276; p. 512.
Paper receptacles, Device for making. D. J. Jennings. No. 1,346,827; July 20; v. 276; p. 417.
Peeler, Vegetable-. J. H. Hamlin. No. 1,347,091; July 20; v. 276; p. 469.
Peeling attachment, Fruit and vegetable. A. Olevin. No. 1,347,288; July 20; v. 276; p. 508.
Peeling tomatoes, Machine for. C. Kirino. No. 1,347,385; July 20; v. 276; p. 527.
Pen and pencil clip. G. F. Hahn. No. 1,347,090; July 20; v. 276; p. 469.
Pen attachment, Fountain-. C. Schwartz. No. 1,346,982; July 20; v. 276; p. 448.
Penwiper. V. G. Jasper. No. 1,347,164; July 20; v. 276; p. 483.
Perambulator. A. B. Leith. No. 1,347,169; July 20; v. 276; p. 484.
Phonograph, Automatic. C. M. Heck. No. 1,347,096; July 20; v. 276; p. 470.
Phonograph sound-box. C. H. Shaw. No. 1,347,059; July 20; v. 276; p. 463.
Phonograph-springs, Fastening device for. G. T. Cherington. No. 1,347,079; July 20; v. 276; p. 467.
Phonographs, Turntable for. J. G. Merriam. No. 1,347,113; July 20; v. 276; p. 473.
Piano, Keyboard for practicing and teaching the playing of the. H. S. Wilder. No. 1,347,068; July 20; v. 276; p. 465.
Piano-players, Pneumatic and connection for pneumatic. W. Lane. No. 1,346,900; July 20; v. 276; p. 431.
Picture apparatus, Motion-. R. P. De Vault. No. 1,347,326; July 20; v. 276; p. 515.
Picture apparatus, Panoramic-motion-. T. A. Killman. No. 1,347,103; July 20; v. 276; p. 471.
Picture film, Motion-. O. A. Owen. No. 1,347,053; July 20; v. 276; p. 462.
Picture machine, Motion-. J. Darby. No. 1,346,880; July 20; v. 276; p. 427.
Pipe and rod bending machine. B. Schenk. No. 1,346,981; July 20; v. 276; p. 448.
Pipe-cleaner. C. M. Tallman. No. 1,347,304; July 20; v. 276; p. 511.
Pipe-wrench, Adjustable. J. Shaffer. No. 1,346,983; July 20; v. 276; p. 948.
Piston. J. B. Davis. No. 1,347,082; July 20; v. 276; p. 467.
Pistons, Making. J. Flammang. No. 1,347,449; July 20; v. 276; p. 539.
Pistons, Making. J. Flammang. No. 1,347,450; July 20; v. 276; p. 539.
Pistons, rams, rods, and the like, Packing device for. A. and A. R. Murray. No. 1,347,351; July 20; v. 276; p. 520.
Planter. M. N. Carlisle. No. 1,347,441; July 20; v. 276; p. 538.
Plow, Agricultural. E. C. Caley and C. C. Wray. No. 1,347,321; July 20; v. 276; p. 514.
Plug-connector, Electrical. W. C. Tregoning. No. 1,346,880; July 20; v. 276; p. 423.
Pneumatic motor. H. R. Christiausen. No. 1,347,444; July 20; v. 276; p. 538.
Pocket-picking, Device for the prevention of. F. Bini. No. 1,347,005; July 20; v. 276; p. 452.
Portable clamp. A. Anthony. No. 1,347,360; July 20; v. 276; p. 522.
Potatoes Machine for cutting seed-. J. L. Schroeder. No. 1,347,058; July 20; v. 276; p. 463.
Powder-receptacle. G. Felsenthal. No. 1,347,149; July 20; v. 276; p. 480.
Power-transmission mechanism. W. B. Moses. No. 1,347,117; July 20; v. 276; p. 474.
Power-transmission mechanism. R. L. Williamson. No. 1,347,315; July 20; v. 276; p. 513.
Power-transmitting means. W. Buhl. No. 1,347,076; July 20; v. 276; p. 466.
Press: *See*—
Arbor-press.
Presses, Compression-box for oil-. M. B. Green. No. 1,347,455; July 20; v. 276; p. 540.
Presses, Compression-box for oil-. M. B. Green. No. 1,347,456; July 20; v. 276; p. 540.
Pressure-gage. E. B. Crocker. No. 1,346,941; July 20; v. 276; p. 439.
Printing-plates, Preparing. A. J. Hain. No. 1,346,885; July 20; v. 276; p. 428.
Printing-press chase. C. H. Weant. No. 1,347,312; July 20; v. 276; p. 512.
Projectile, Bomb-thrower. E. Schneider. No. 1,347,125; July 20; v. 276; p. 475.
Propelling, tractive, and supporting apparatus. T. Vuia. No. 1,347,424; July 20; v. 276; p. 535.
Pump. F. Stoklosa. No. 1,346,989; July 20; v. 276; p. 449.
Puller, Repair-hub and wheel-. C. N. Strader. No. 1,346,857; July 20; v. 276; p. 422.
Pump, Air-. S. S. Avery. No. 1,347,434; July 20; v. 276; p. 536.
Pump, Automobile-. W. F. Warren. No. 1,346,866; July 20; v. 276; p. 424.
Pump, Centrifugal. A. R. Wilfley. No. 1,346,924; July 20; v. 276; p. 436.
Pump, Centrifugal. A. R. Wilfley. No. 1,346,926; July 20; v. 276; p. 436.
Pump-controlling device, Water-. J. Rossini. No. 1,347,408; July 20; v. 276; p. 531.

Pump, Gear-. B. W. Hurd. No. 1,346,960; July 20; v. 276; p. 443.
Pump, Pneumatic. H. J. Hawvichorst. No. 1,347,033; July 20; v. 276; p. 457.
Pump, Speedometer-. T. C. Prouty. (Reissue.) No. 14,922; July 20; v. 276; p. 547.
Pump, Tire-. C. M. Starr. No. 1,346,919; July 20; v. 276; p. 435.
Pumps, Fishing-tool for. R. W. Hoover. No. 1,347,041; July 20; v. 276; p. 459.
Pumps, Standpipe connection for centrifugal. A. R. Willey. No. 1,346,925; July 20; v. 276; p. 436.
Punching apparatus, Strip-. B. M. Shanklin. No. 1,346,916; July 20; v. 276; p. 434.
Quick-combustion engine, Compound. W. G. Germandt. No. 1,347,087; July 20; v. 276; p. 468.
Rack: *See*—
Feeding-rack.
Radiator foot-rest. C. R. Squires. No. 1,347,129; July 20; v. 276; p. 476.
Radiator, Sectional. W. I. Gibson. No. 1,347,219; July 20; v. 276; p. 493.
Radiators, Air-valve for. F. E. Etzel. No. 1,347,216; July 20; v. 276; p. 493.
Radiosignaling system. A. N. Goldsmith. No. 1,347,328; July 20; v. 276; p. 516.
Rail-anchor. A. L. Stanford. No. 1,347,301; July 20; v. 276; p. 510.
Rail-anchor. A. L. Stanford. No. 1,347,302; July 20; v. 276; p. 510.
Rail-joint. J. Janik. No. 1,347,376; July 20; v. 276; p. 525.
Rail-joint. J. Sedlak. No. 1,347,414; July 20; v. 276; p. 533.
Rail-profile instrument. F. V. Corman. No. 1,347,078; July 20; v. 276; p. 467.
Railway-crossing. C. A. Zobel. No. 1,347,431; July 20; v. 276; p. 536.
Railway-rail fastener. E. A. Kehn. No. 1,346,965; July 20; v. 276; p. 444.
Railway-signal-actuating mechanism, Automatic. S. F. Bashara. No. 1,346,934; July 20; v. 276; p. 438.
Railway-tie. W. T. Wilson. No. 1,347,427; July 20; v. 276; p. 535.
Railway-traffic-controlling apparatus. L. V. Lewis. No. 1,347,045; July 20; v. 276; p. 460.
Rasping-wheel. C. L. Smith and E. S. Webster. No. 1,347,299; July 20; v. 276; p. 510.
Razor. W. A. Stebbins. No. 1,347,234; July 20; v. 276; p. 496.
Razor-guard. W. A. Snyder. No. 1,346,855; July 20; v. 276; p. 422.
Receptacle-closure. C. E. Doyle No. 1,347,446; July 20; v. 276; p. 539.
Receptacle-closure. W. W. Sloane. No. 1,346,853; July 20; v. 276; p. 421.
Receptacle-cover. A. Swenson. No. 1,347,419; July 20; v. 276; p. 534.
Reflector and making same, Metal. F. E. Jones. No. 1,347,335; July 20; v. 276; p. 517.
Reflector, Parabolic sectional. C. E. Godley. No. 1,347,268; July 20; v. 276; p. 504.
Refractory composition and making same. A. T. Hinckley. No. 1,346,959; July 20; v. 276; p. 443.
Regulator: *See*—
Thermostatic regulator.
Resilient rod. C. E. McManus. No. 1,346,834; July 20; v. 276; p. 418.
Resilient wheel. T. T. Chaloner. No. 1,347,442; July 20; v. 276; p. 538.
Resilient wheel. J. W. Headley. No. 1,347,034; July 20; v. 276; p. 458.
Resistance device. L. Kebler. No. 1,347,102; July 20; v. 276; p. 471.
Resistance material. H. T. Bellamy and B. T. Sweely. No. 1,346,874; July 20; v. 276; p. 426.
Rifle-cleaning rod. J. B. Jones. No. 1,347,381; July 20; v. 276; p. 526.
Rim-fastening means, Demountable-. D. L. Spero. No. 1,347,128; July 20; v. 276; p. 476.
Rod: *See*—
Connecting-rod. Rifle-cleaning rod.

Stamps, Trading-. Browning & Sanders. No. 126,921; July 20; v. 276; p. 573.
Stove, range, &c., paste or polish. Société des Produits du Lion Noir. No. 118,626; July 20; v. 276; p. 568.
Stoves, Gas-. General Gas Light Co. No. 124,682; July 20; v. 276; p. 572.
Straws, Drinking-. Albert Pick & Company. No. 132,199; July 20; v. 276; p. 584.
Suits, Girls' play-. Jordan Marsh Company. No. 132,646; July 20; v. 276; p. 586.
Suits, Youths' and boys' ready-made. Goodman & Co. No. 121,111; July 20; v. 276; p. 570.
Suspenders. Arbuthnot-Stephenson Co. No. 130,314; July 20; v. 276; p. 580.
Talking-machine needle, Wooden. T. H. Legge. No. 131,640; July 20; v. 276; p. 583.
Telephone-receivers. The Magnavox Co. No. 132,879; July 20; v. 276; p. 586.
Tire, &c., patches. Henry R. Hoffeld. No. 115,026; July 20; v. 276; p. 566.
Tires and inner tubes. The Rotary Tire and Rubber Co. No. 118,275; July 20; v. 276; p. 567.
Tires and tire-casings. A. Reinsberg. No. 127,870; July 20; v. 276; p. 575.
Tires, Antiskidding rubber. P. Sangoff. No. 118,355; July 20; v. 276; p. 567.
Tires, Inner tubes for pneumatic. Surety Tire & Rubber Co. No. 120,436; July 20; v. 276; p. 569.
Tires, Rubber vehicle-. The Pan-American Rubber Co. No. 118,930; July 20; v. 276; p. 659.
Tobacco, Smoking and chewing. Liggett & Myers Tobacco Company. No. 109,117; July 20; v. 276; p. 565.

Trolling-lines, spinners, artificial minnows, &c. The Thomson-Diggs Co. No. 121,795; July 20; v. 276; p. 571.
Trousers. Wine Brothers and Company. No. 128,810; July 20; v. 276; p. 577.
Trunks, suitcases, and traveling-bags. Ely & Walker Dry Goods Company. No. 128,628; July 20; v. 276; p. 576.
Turpentine. Ernst Zobel Company. No. 131,616; July 20; v. 276; p. 583.
Underwear, night-shirts, shirts, and pajamas. M. Rothkopf. No. 128,701; July 20; v. 276; p. 576.
Waists and blouses, Ladies'. Einhorn Bros. No. 131,067; July 20; v. 276; p. 581.
Washing machines, Electric clothes-. C. F. Adams Company. No. 127,102; July 20; v. 276; p. 574.
Washing-tablets. Easy Wash Laundry Tablet Co. No. 121,336; July 20; v. 276; p. 570.
Watchcases. The Keystone Watch Case Company. No. 131,975; July 20; v. 276; p. 583.
Watches. J. Gottlieb. No. 131,110; July 20; v. 276; p. 581.
Woolen, mohair, &c., piece goods. Goodall Worsted Co. No. 116,837; July 20; v. 276; p. 567.

CLASSIFICATION OF PATENTS

ISSUED JULY 20, 1920.

NOTE.—First number=class, second number=subclass, third number=patent number.

2— 73: 1,347,180
83: 1,347,359
92: 1,347,050
98: 1,347,400
114: 1,347,338
117: 1,347,046
126: 1,347,188
3— 12: 1,347,004

Patents Nos. 1,347,485 to 1,348,144.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 276—No. 4. TUESDAY, JULY 27, 1920. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Changes in Classification.

(Order No. 2,593.)

Department of the Interior,
United States Patent Office,
Washington, D. C., July 16, 1920.

It is hereby directed that class 191, Electricity—Transmission to Vehicles, be transferred from Division XLII to Division XXXIV, to take effect immediately.

R. F. WHITEHEAD,
Acting Commissioner.

Adverse Decisions in Interference.

Patent No. 1,258,548.

On June 17, 1920, a decision was rendered that Carl R. Englund was not the first inventor of the subject-matter covered by claims 1 and 2 of his Patent No. 1,258,548, subject, "Radiotelephony," and no appeal having been taken within the time allowed such decision has become final.

Patent No. 1,273,148.

On June 25, 1920, a decision was rendered that James A. Carney was not the first inventor of the subject-matter covered by claims 1 and 2 of his Patent No. 1,273,148, subject, "Headlight construction," and no appeal having been taken within the time allowed such decision has become final.

Patent No. 1,293,891.

On June 18, 1920, a decision was rendered that John F. O'Connor was not the first inventor of the subject-matter covered by claims 1 and 2 of his Patent No. 1,293,891, subject, "Combined friction-shells and spring-casings," and no appeal having been taken within the time allowed such decision has become final.

Disclaimer.

1,317,868.—*Carleton Ellis*, Montclair, N. J. Process of making Derivatives of Petroleum-Hydrocarbons. Patent dated October 7, 1919. Disclaimer filed July 3, 1920, by the assignee, *Ellis-Foster Company*, and the patentee.

Enter their disclaimer and the disclaimer of each of them—

"To claim 17, which reads as follows:

"17. The process of making derivatives of hydrocarbons which comprises cracking petroleum to form olefin material, in treating said olefin material under such conditions as to form chlorin compounds and in contacting said chlorin compounds with a reagent capable of replacing chlorin."

NOTICE.

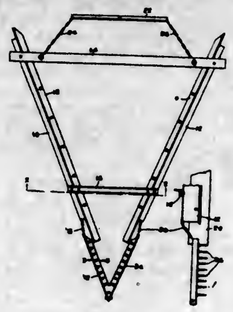
PAYMENT OF PATENT FEES—ACT OF MARCH 6, 1920.

Department of the Interior,
United States Patent Office,
Washington, D. C., June 25, 1920.

This Office has been advised by the Assistant Secretary of the Treasury that a circular letter is being forwarded to the Treasurer and Assistant Treasurers of the United States, Federal Reserve Banks, and National Bank depositaries calling attention to the act of Congress approved March 6, 1920, which requires that patent fees be paid directly to the Commissioner of Patents. (See 272 O. G., 379.)

J. T. NEWTON,
Commissioner.

APPLICATIONS UNDER EXAMINATION.



Condition at Close of Business July 17, 1920.

Room No.	Divisions and subjects of invention.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.
314	1. Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders; Trees, Plants, and Flowers.	Feb. 24	Mar. 1	515
128	2. Bee Culture; Curtains, Shades, and Screens; Dairy; Medicines; Pneumatics; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco.	Nov. 21	Feb. 11	972
175	3. Electric Heating and Rheostats; Electrochemistry; Heating; Metal-Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Feb. 2	Jan. 6	624
234	4. Conveyers; Conveyers, Fluid-Current; Elevators; Excavating; Handling—Hand and Hoist-Line Implements; Hoisting; Material or Article Handling; Pneumatic Despatch; Pushing and Pulling Implements; Railway Mail Delivery; Store-Service; Traversing Hoists.	Nov. 12	Apr. 26	1,435
167	5. Book-Making; Books, Strips and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	Mar. 31	Apr. 2	402
318	6. Bleaching and Dyeing; Chemicals; Explosives; Fertilisers; Liquid Coating Compositions; Plastic Compositions; Substance Preparation.	Jan. 24	Jan. 21	560
312	7. Games and Toys; Optics; Photography; Velocipedes	Mar. 19	May 8	840
131	8. Beds; Chairs and Seats; Flexible-Sheet Securing Devices; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	May 5	June 7	352
221	9. Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid-Current; Pumps.	Feb. 9	Feb. 19	579
235	10. Carriages and Wagons; Land-Vehicles; Land-Vehicles—Bodies and Tops; Land-Vehicles—Dumping; Land-Vehicles, Wheel Substitutes; Motor Vehicles.	Feb. 6	May 21	922
154	11. Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Spring Devices; Whips and Whip Apparatus.	Mar. 1	Mar. 29	773
222	12. Machine Elements	Nov. 13	Apr. 27	1,088
329	13. Bolt, Nail, Nut, Rivet, and Screw Making; Button Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Tools and Implements, Making; Metal Working; Needle and Pin Making; Turning.	Nov. 7	Apr. 30	1,199
323	14. Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal-Bending; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire-Working.	Jan. 12	Apr. 8	669
308	15. Bread, Pastry, and Confection Making; Coating; Glass; Laminated Fabrics and Analogous Manufactures; Paper-Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics.	Nov. 5	Apr. 13	1,145
111	16. Radiant Energy; Telegraphy; Telephony	Nov. 11	Dec. 11	885
307	17. Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet Material Associating or Folding; Sheet Feeding or Delivering; Type Setting.	May 3	May 8	194
229	18. Liquid Heaters and Vaporizers; Motors, Expansible Chamber Type; Power Plants; Speed Responsive Devices; Steam and Vacuum Pumps.	Jan. 12	Jan. 22	1,085
236	19. Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems; Stoves and Furnaces; Domestic Cooking Vessels; Thermostats and Humidostats.	Nov. 24	Jan. 26	611
179	20. Artificial Body Members; Builders' Hardware; Closure-Fasteners; Cutlery; Dentistry; Locks and Latches; Safes; Undertaking.	Apr. 13	Apr. 20	681
212	21. Brakes and Gins; Carding; Cloth-Finishing; Continuous-Strip Feeding; Cordage; Felt and Fur; Knitting and Netting; Silk; Spinning; Weaving; Winding and Reeling.	Dec. 19	May 20	487
249	22. Aeronautics; Firearms; Ordnance	Apr. 22	May 22	284
217	23. Acoustics; Coin-Handling; Horology; Recorders; Registers; Sound Recording and Reproducing; Time-Controlling Mechanism.	Jan. 6	Apr. 26	710
144	24. Apparel; Apparel Apparatus; Garment Supporters; Sewing-Machines	Jan. 16	Apr. 23	634
315	25. Agitating; Butchering; Centrifugal Bowl Separators; Mills; Threshing; Vegetable Cutters and Crushers; Gas Separation.	June 14	June 4	216
105	26. Electricity, Generation; Motive Power; Prime Mover Dynamo Plants	Nov. 7	Dec. 15	719
214	27. Abrading; Brushing and Scrubbing; Laundry; Washing Apparatus	Mar. 13	Apr. 5	613
225	28. Internal-Combustion Engines	Feb. 9	Apr. 15	657
147	29. Boring and Drilling; Chucks or Sockets; Coopering; Rod Joints or Couplings; Wheelwright-Machines; Wood-Sawing; Wood-Turning; Woodworking; Woodworking Tools.	Dec. 3	May 21	685
152	30. Illuminating-Burners; Illumination; Liquid and Gaseous Fuel Burners; Type-Writing Machines	Jan. 10	June 1	1,138
172	31. Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Fuel and Igniting Devices; Gas, Heating and Illuminating; Hides, Skins, and Leather; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue; Sugar and Salt.	Nov. 10	Jan. 26	1,178
278	32. Gas and Liquid Contact Apparatus; Heat Exchange; Refrigeration	Nov. 1	Apr. 5	1,227
70	33. Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs.	Mar. 3	Apr. 17	511
304	34. Electricity-Transmission to Vehicles; Railways; Railway Rolling Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Track-Sanders; Vehicle-Fenders.	June 9	June 1	153
57	35. Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicators; Toilet	June 5	June 1	550
204	36. Automatic Weighers; Driers; Geometrical Instruments; Measuring Instruments; Force Measuring	Jan. 26	Feb. 17	1,152
107	37. Electric Lamps; Electricity, Circuit Makers and Breakers; Electricity, General Applications	Mar. 3	Feb. 20	1,305

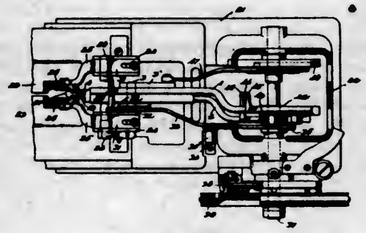
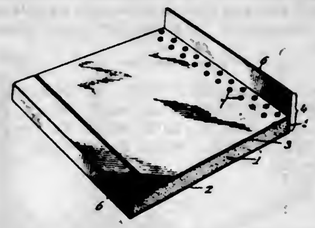
PATENTS



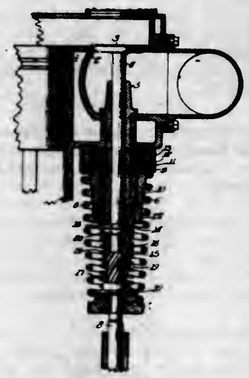
GRANTED JULY 27, 1920.

1,347,485. ROAD-DRAG. GLENN H. ALLYN, Madison Lake, Minn. Filed Aug. 2, 1919. Serial No. 314,922. 2 Claims. (Cl. 37—5.)

1. A road drag comprising side members which converge as they extend from the front to the rear, transverse bars secured at their ends to said members, the ends of said bars being inclined downwardly at an obtuse angle, whereby said members are inclined inwardly, and blades secured to the inclined sides of said members.



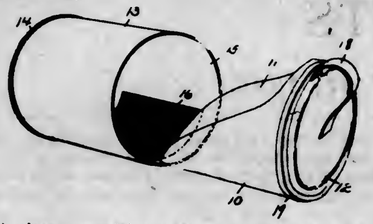
1,347,486. MECHANISM FOR CLIPPING HOLES IN SHEET MATERIAL. EDWARD B. ALLEN, Bridgeport, Conn., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed May 18, 1918. Serial No. 234,132. 9 Claims. (Cl. 164—2.)



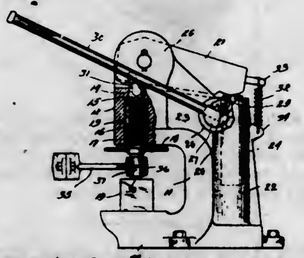
1. A cutting device comprising an eyed cutting element having a passageway for the clippings, and an anvil having a surface against which the cutting element is adapted to act to cut a hole in the material, said anvil having a hump in fixed relation therewith and rising from the surface portion thereof within the area embraced by the eye of the cutting element when said eye is in contact with the anvil.

1,347,487. PLASTER-BOARD. LOUIS E. ARMSTRONG and HUGH BOWYER BROCKENBROUGH, Fort Dodge, Iowa, assignors to Plymouth Gypsum Company, Fort Dodge, Iowa, a Corporation of Iowa. Filed Oct. 30, 1919. Serial No. 334,526. 5 Claims. (Cl. 154—45.9.)

1. A plaster board comprising a body of plastic material, a sheet of fibrous material covering one face of said body and having a marginal portion engaging an edge of said body and adapted to be folded over upon the opposite face of said body, a sheet of fibrous material covering the opposite face of said body and in lapping engagement with the folded-over marginal portion of said first-mentioned sheet, the latter having portions thereof removed to permit the material of the body to pass through said underlapping marginal portion and to adhere to said folded-over marginal portion.

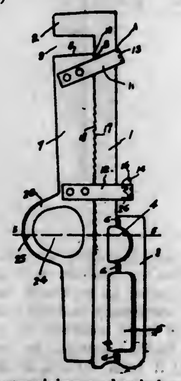


1,347,488. VALVE. STANLEY B. ARNOLD, Chicago, Ill. Filed Aug. 15, 1918. Serial No. 250,015. 10 Claims. (Cl. 123—90.)



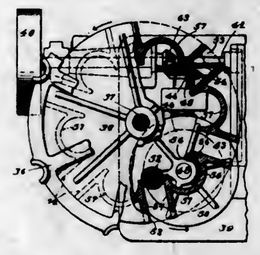
1. A valve structure including a valve seat; a valve; a stem for the valve; a stationary toothed member; a rotatable toothed member in separable tooth engagement with the aforesaid stationary toothed member, the interengaging portions of these members being formed to permit said rotatable toothed member to turn in one direction and to prevent it from turning in the reverse direction; and a worm substantially fixed upon the valve stem and operating within the rotatable toothed member.

1,347,489. SIEVE. SAMUEL L. BATEMAN, Newark, N. J., assignor of one-half to George A. Lobsitz, Newark, N. J. Filed Mar. 15, 1920. Serial No. 365,819. 3 Claims. (Cl. 83—60.)



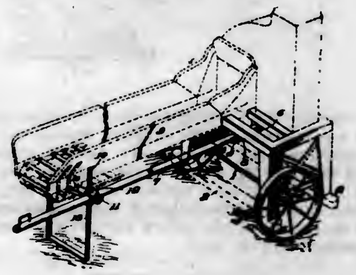
1. A sieve comprising a scoop member with an open side, and a cylindrical sieve member with a closed end and an open end and having a sieve in its side wall, the members telescoping longitudinally and being freely separable.

1,347,490. APPARATUS FOR RENDERING WORN BUSHINGS USABLE. CHARLES P. BEACH, Littleton, N. H. Filed June 16, 1916, Serial No. 104,056. Renewed Jan. 9, 1919. Serial No. 270,443. 4 Claims. (Cl. 78—13.)



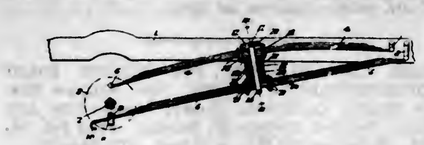
1. An apparatus for fitting bushings consisting of a frame, a pressing member slidable in the frame, an anvil mounted on the frame beneath the pressing member, a vertically movable rack mounted on the frame a shaft rotatably mounted on the frame, a pinion on said shaft coöperating with the rack, means for rotating the shaft, a pressing lever pivoted on the frame, and having one end in engagement with the upper end of the rack, and connections between the other end of the lever and the pressing member.

1,347,491. WRENCH. LEON BENOIT and PERCIVAL FAULKNER KING, Vancouver, British Columbia, Canada. Filed Feb. 15, 1919. Serial No. 277,330. 8 Claims. (Cl. 81—181.)



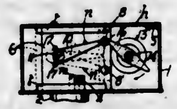
4. A wrench comprising a shank having a rigid jaw, a second shank mounted on the edge of the first-mentioned one having its upper end adapted to form the sliding jaw for the wrench and rounded at one corner for rolling contact with said first shank, and an inclined strap secured to the second shank embracing the first one and bearing at its upper embracing edge on the rear edge of the first shank at a point in advance of the point of rolling contact of the second shank with the first one.

1,347,492. INTERMITTENT-DRIVING MECHANISM FOR BOOK BINDING OR COVERING MACHINES. ALFRED BREDENBERG, Champlain, N. Y., assignor of one-half to Sheridan Iron Works, a Corporation of New York, and one-half to T. W. and C. B. Sheridan Company, a Corporation of New York. Filed Feb. 1, 1918, Serial No. 214,844. Renewed Dec. 16, 1919. Serial No. 345,303. 3 Claims. (Cl. 74—41.)



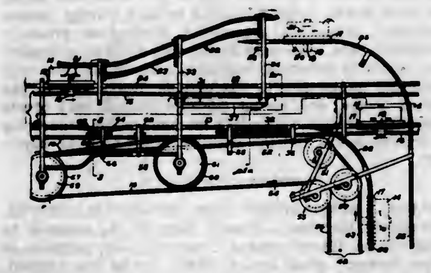
1. Mechanism for intermittently driving an endless carrier, comprising a rotary driven member by which the carrier is advanced, the same formed with a plurality of radial tracks equidistantly arranged at less than a quadrant apart and opening inwardly toward the axis of rotation, a rotating driving member having its axis located eccentrically to but substantially within the periphery of the driven member, and said driving member having a driving pin arranged to engage and disengage the inward end of the successive tracks by a motion tangential to each track, whereby the driven member and carrier at each actuation are maintained in motion for a period greater than the period of rest and with easy starting and stopping action.

1,347,493. ENSILAGE-CUTTER. FRED J. BULLOCK and WARD H. PRESTON, Shortsville, N. Y., assignors to Papec Machine Company, Shortsville, N. Y., a Corporation of New York. Filed Nov. 6, 1916. Serial No. 129,799. 4 Claims. (Cl. 193—14.)



1. In an ensilage cutter, a two-wheeled frame, a conveyer carried by said frame and extending outwardly therefrom, a reach detachably connected to said frame at one end, an arm secured to said reach having a connection with the free end of said conveyer, a draft bar slidably carried by said reach, and means for locking said draft bar in adjusted position.

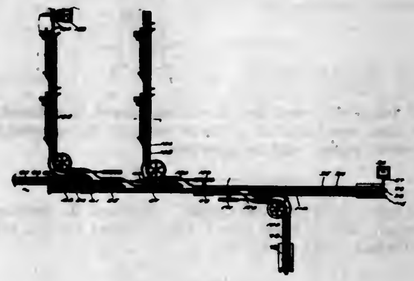
1,347,494. SPRING SUSPENSION FOR VEHICLES. ELI JAY BUSHEY, New York, N. Y. Filed Nov. 15, 1919. Serial No. 338,839. 4 Claims. (Cl. 267—41.)



1. A spring suspension for motor vehicles comprising a semi-elliptic main leaf spring connected at its ends with the frame and rear axle housing of the vehicle, an auxiliary leaf spring located under the main spring and spaced therefrom, said auxiliary spring being shackled at one end to the vehicle frame and having a sliding connection at its other end with the rear axle housing, a saddle held to the frame and surrounding said springs midway the ends thereof, said main spring being pivotally supported in the saddle and the auxiliary spring being free to move endwisely and vertically relatively to the saddle, and means controlled by the flexing of the main spring to a predetermined extent for placing the auxiliary spring under tension.

1,347,495. AUTOMOBILE-ALARM. GEORGE M. CAMPBELL, St. Louis, Mo. Filed July 28, 1919. Serial No. 313,779. 5 Claims. (Cl. 177—314.)

1. In an alarm of the character described, a suitable casing, a movable block mounted therein, a switch pivotally secured to said block, a rotatable spindle in the casing, a tripper or dog on the spindle adapted to foul the switch and oscillate the same through a limited arc for one position of the block and to clear the switch for another position of said block, contacts on the block for engaging the switch when the latter has been oscillated by the dog, a source of electric energy, an electric circuit, an alarm or signal in the path of said circuit, and suitable electric connections between the switch and contacts aforesaid and said circuit.



1,347,496. CARRIER APPARATUS. LOUIS W. CHISM, Southington, Conn., assignor to The Steel Products Company, Hartford, Conn., a Corporation of Connecticut. Filed June 12, 1917. Serial No. 174,259. 15 Claims. (Cl. 186—14.)

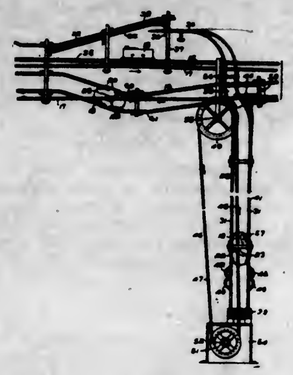
1. In a carrier apparatus, the combination of a carrier, two carrier-propelling cables one driven by the other, the driving cable being provided with a loop, means driven by said loop for driving said driven cable, and means to interrupt and reëstablish the driving connections between said carrier and said driving cable, thereby to permit said carrier to pass said loop without traversing the same.

7. In a carrier apparatus, the combination of two carrier-propelling cables one driven by the other, the driving cable being provided with a loop, means driven by said loop for driving said driven cable, a carrier, means to transfer driving engagement of said carrier from one to the other of said cables, and means to transfer driving engagement of said carrier from one part of said driving cable to another adjacent said loop.

1,347,497. CARRIER SYSTEM. LOUIS W. CHISM, Springfield, Mass., assignor, by mesne assignments, to The Steel Products Company, Hartford, Conn., a Corporation of Connecticut. Filed June 13, 1912, Serial No. 703,370. Renewed Oct. 17, 1919. Serial No. 331,507. 28 Claims. (Cl. 186—15.)

1. A cable carrier system having, in combination, a main outgoing track, a main incoming track, a branch outgoing track leading from said main outgoing track, a branch incoming track leading to said main incoming track, a carrier, a main endless motor cable for propelling said carrier along said main outgoing and main incoming tracks, an auxiliary endless motor cable for propelling said carrier along said branch outgoing and incoming tracks, means acting automatically to transfer the driving engagement of said carrier from one to the other of said cables in passing out of coöperation with one of said tracks into coöperation with another of said tracks.

6. A cable carrier system having, in combination, main track and auxiliary tracks, a plurality of carriers of different characteristics, main and auxiliary endless motor cables adapted to propel said carriers along said main and auxiliary tracks, and means selectively and automatically to divert carriers of certain characteristics from said main track onto said auxiliary track.



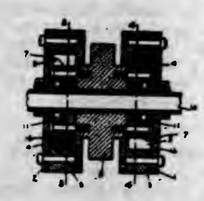
10. A multiple-unit carrier system comprising, in combination, a plurality of individually distinct detachably connected units each comprising a track having a plurality of rails, the rails of one unit being laterally displaced to receive the tracks of another unit; and means joining the displaced rails of the one unit to the rails of the other unit to provide a substantially continuous guideway for a carrier.

17. In a device of the class described comprising a main track, a branch track having the rails at the head thereof deflected laterally into alinement and arched, said rails being superposed on a rail of the main track, and a carrier supporting guide arranged parallel to the main track adjacent the head of said branch track.

1,347,498. STORE-SERVICE APPARATUS. LOUIS W. CHISM, Springfield, Mass., assignor, by mesne assignments, to The Steel Products Company, Hartford, Conn., a Corporation of Connecticut. Filed May 4, 1914, Serial No. 836,054. Renewed Apr. 22, 1920. Serial No. 375,898. 6 Claims. (Cl. 186—14.)

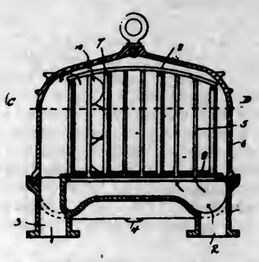
1. A store service apparatus comprising, in combination, a branch track; a main track having an interruption at

its juncture with said branch track; a carrier having main guides for coöperation with said tracks and a supplemental guide; means for propelling said carrier along said



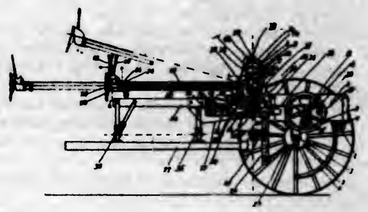
main track past said juncture; and means to coöperate with said supplemental guide to support the carrier in its travel across said interruption.

1,347,499. CURTAIN-WINDOW. WILLIAM J. DECKER, Detroit, Mich. Filed July 8, 1918. Serial No. 243,761. 4 Claims. (Cl. 296—145.)



1. In combination, a fabric sheet having an opening and being turned back on itself around the opening, a frame member positioned between the turned back portion and the main portion of the sheet, a glass panel, and a second frame member engaging the glass panel and extending around the first frame member and inwardly between it and the main portion of the sheet, the curtain being imperforate around said opening and one side of the curtain being smooth and unbroken, all of the frame and the glass being on the other side of the curtain.

1,347,500. ROTARY COMPRESSED-AIR MOTOR. DOUGLAS DOBBINS, Shelbyville, Ind., assignor of one-half to John Day De Prez, Shelbyville, Ind. Filed Oct. 17, 1918. Serial No. 258,593. 2 Claims. (Cl. 253—50.)

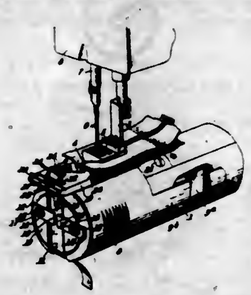


1. A rotary motor including in combination two housings, each having a rotary member therein, a single means on which said housings are centrally mounted and spaced apart, and a driven member surrounding said mounting means between said housings, and forming a portion of the adjacent sides of each and at each side adjacent and secured directly to the rotary member of the motors respectively, substantially as set forth.

1,347,501. ARRANGEMENT FOR DRYING SOLID LIQUID-CONTAINING BODIES. JENS WILLIAM ÆGIDIUS ELLING, Christiania, Norway, assignor to A/S Myrens Verksted, Christiania, Norway. Filed Feb. 21, 1919. Serial No. 278,551. 4 Claims. (Cl. 34—30.)

1. In an apparatus for drying solid materials a chamber supplied with heating medium and a chamber containing the material to be dried, the pressure in said last chamber being lower than the pressure in the heating chamber and bags of flexible material extending into the drying chamber and communicating with the heating chamber said bags being spaced apart to give room for the goods to be placed between them.

1,347,502. TRACTOR. FRED A. FROGH, St. Paul, Minn. Filed July 5, 1919. Serial No. 308,692. 14 Claims. (Cl. 180—77.)

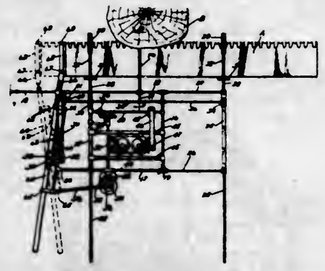


1. In a tractor, the combination with the driving means and the steering means, the latter including a vertically disposed pivotal connection whereby it is connected with said driving means, the driving means being swingable around said pivotal connection of a member swingably mounted on pivot means, the pivot thereof being coincident with said pivotal connection and located above the latter said pivot means being supported by said driving means, rearwardly extendible controlling mechanism pivotally mounted on said member in such a way as to be swingable in an upwardly direction, operative connections from said controlling mechanism to the driving means and to the steering means, and means movable around said pivots irrespective of said controlling mechanism for connecting the driving means and the steering means with an implement.

1,347,503. STRIP-GUIDE FOR SEWING-MACHINES. GEORGE S. GATCHELL, Roselle Park, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Apr. 6, 1917. Serial No. 160,087. 16 Claims. (Cl. 112—152.)

1. In a cylinder-bed sewing machine, the combination with a work-supporting arm, stitch-forming mechanism including a pair of needles, and work-feeding mechanism, of means for guiding a previously stitched seam between

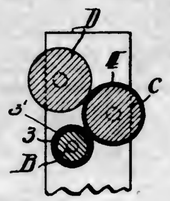
said needles, means for guiding a stay-strip upwardly across the free end of said work-arm, and adjustable means adjacent the stitching plane for guiding said stay-strip to the stitch-forming mechanism.



2. In a cylinder-bed sewing machine, the combination with a work-supporting arm, stitch-forming mechanism, work-feeding mechanism and a presser-foot, of means sustained below the stitching plane and in advance of the presser-foot for guiding a stay-strip upwardly across and within the periphery of the free end of the work-arm and delivering it to said stitch-forming and feeding mechanism in advance of said presser-foot.

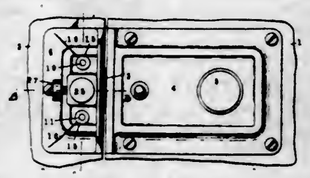
3. A sewing machine comprising, in combination, a frame including a hollow work-supporting arm including a hollow work-supporting arm whose free end-portion is formed with an upwardly extending strip-guiding passageway, means for varying the effective width of said passageway, and stitch-forming and work-feeding mechanisms incorporated in said frame.

4. A sewing machine comprising, in combination, a frame having a hollow work-supporting arm including an end-wall, said end-wall being cut away to form an upwardly extending strip-guiding channel, stitch-forming and work-feeding mechanisms incorporated in said frame, guide means between said channel and stitch-forming mechanism, and means for retaining the strip in said channel.



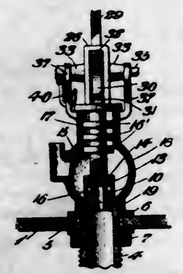
5. A sewing machine comprising, in combination, a frame having a hollow work-supporting arm including an end-wall, stay-strip guiding means sustained by said end-wall, a throat-plate sustained by said arm and projecting forwardly of said end-wall and formed with a strip-guiding aperture, and stitch-forming and work-feeding mechanisms incorporated in said frame.

1,347,504. TREE AND LOG SAWING MACHINE. NEWTON L. GLOVER, Windom, Minn. Filed July 5, 1919. Serial No. 308,857. 18 Claims. (Cl. 143—68.)



1. A saw mill of the kind described comprising a framework, a saw blade, means for guiding and pressing said saw blade to its work, a saw operating lever pivotally associated with said frame, and a motor on said frame with connections for oscillating said lever, said lever being extensible in opposite directions from its fulcrum as said lever is extended to follow the feed movements of the saw.

1,347,505. PRINTING APPARATUS. JOHN GONDEK, St. Paul, Minn. Filed Sept. 1, 1917. Serial No. 189,303. 3 Claims. (Cl. 101—215.)



2. In a printing apparatus of the class described, a transfer cylinder having a yielding composition facing, a relatively hard non-ink absorbing covering for said facing and a transfer cylinder arranged in coöperation with said transfer cylinder.

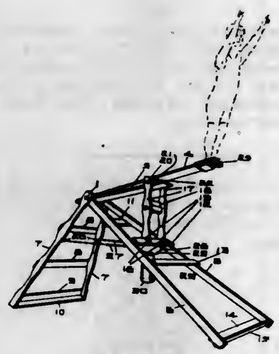
1,347,506. LOCK-OPERATED CIRCUIT-CLOSER. DAVID L. GORDON, New York, N. Y. Filed Dec. 14, 1915. Serial No. 66,678. Renewed Oct. 21, 1918. Serial No. 259,140. 16 Claims. (Cl. 200—55.)

2. In an apparatus of the character described, in combination, a bolt, an electric circuit including a conductor movable to close the circuit by a door opening movement of the bolt when the bolt is in locking position, and means adapted to adjust the extent of the circuit closing movement of said conductor.

1,347,507. INLET-VALVE FOR WATER-CLOSET TANKS. WILLIAM U. GRIFFITHS, Philadelphia, Pa. Filed Feb. 1, 1918. Serial No. 214,814. 1 Claim. (Cl. 137—104.)

In combination, a lever for operating a flush tank valve said lever being adapted to be operated by the rising and falling movements of a liquid in a container, a valve casing having brackets provided with openings therethrough, and a pivot extending through said openings and through an opening in said lever said pivot having a hook member secured to one end thereof which member is adapted to engage an edge of one or the other of said brackets substantially described.

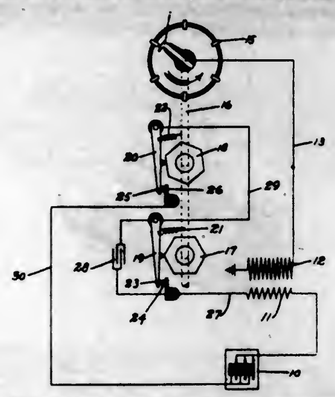
1,347,506. LIQUID COMPOSITION FOR THE TREATMENT OF BINDING-TWINE. JOHN HARSHFIELD, Sutherland, Nebr. Filed Jan. 9, 1920. Serial No. 350,433. 2 Claims. (Cl. 134—14.)



2 A preservative mixture for the treatment of porous articles by impregnation, consisting of approximately equal proportions of lubricating oil and kerosene oil, and a principal proportion of water gas residue.

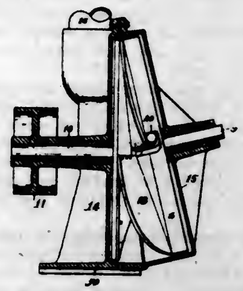
1,347,509. GUN ATTACHMENT. OLAF L. HOWE, Missoula, Mont. Filed Oct. 6, 1917. Serial No. 195,184. 7 Claims. (Cl. 42—56.)

7. In combination with a rifle, a fluid container having an outlet, holding means on said rifle for said container including a housing having a resilient seat for one end of the container and a recessed lug for the other end thereof, said lug having a passageway in line with the outlet from said container, a pipe extending lengthwise of said gun barrel and having its inlet end supported by said lug, and valve mechanism for controlling communication between said container and said pipe.



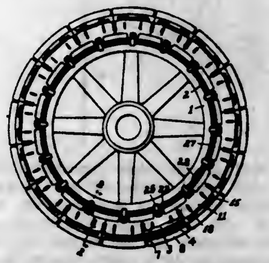
1,347,510. SPRING-BOARD FOR DIVING. DORR E. JOHNSON, Toledo, Ohio, and OLIN E. PARMELEE, Lambertville, Mich. Filed Aug. 13, 1919. Serial No. 317,143. 6 Claims. (Cl. 46—69.)

2. A spring board comprising a pair of boards, means clamping the boards together, a support for the clamp portion of the board, and a supplementary support for one board of the pair, said other board coacting to hold the supplementary support in position.



1,347,511. IGNITION SYSTEM. WILLIAM O. KENNINGTON, London, England, assignor to The Remy Electric Company, a Corporation of Indiana. Filed Sept. 21, 1918. Serial No. 255,046. 5 Claims. (Cl. 123—148.)

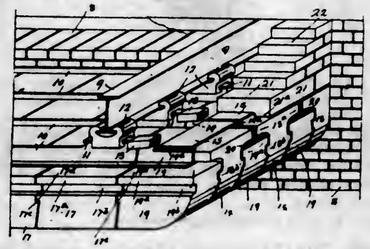
1. In an ignition system, a non-back-firing device comprising a primary coil with a source of current therefor, and a secondary coil with connections for producing sparking impulses; of a main make and break point, and an auxiliary make and break point, both in series in said primary circuit; means for operating said make and break points in quick succession, the main make and break point being operated first in the normal rotation of the engine and last in the reverse rotation, with a condenser shunted



around the contact points of the main make and break point only, substantially as and for the purpose described.

1,347,512. PUMP. JAMES B. KIRBY, Cleveland, Ohio. Filed Apr. 10, 1919. Serial No. 289,044. 6 Claims. (Cl. 230—29.)

1. A pump comprising a casing having an inlet and an outlet, a pair of rotary disks in said casing, arranged at an angle to each other, flexible blades extending between the disks and connected to the same respectively and adapted to open and close as the disks are rotated, and means to rotate the disks, the connection between the blades and at least one margin of each of the disks including means to permit variation in the effective length of the blades.



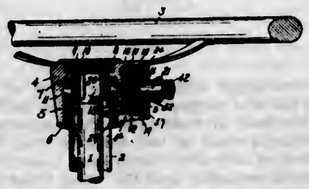
1,347,513. TIRE-PROTECTOR. ALBERT KLEINSHROT, Cleveland, Ohio. Filed Dec. 7, 1918. Serial No. 265,756. 5 Claims. (Cl. 152—16.)

2. In a tire protector, the combination of tread members, the tread members having flanges at the sides there-

of, the flanges having openings therethrough, side plates, the side plates having lugs for entering the openings of said flanges to form hinge joints, the lugs having nibs for engaging said flanges to retain the lugs in operative position, and means for supporting the side plates to permit radial movement thereof, substantially as described.

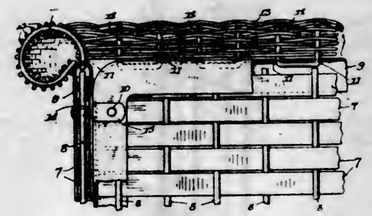
1,347,514. FIRE-ARCH FOR BOILERS. MICHAEL LIPTAK, St. Paul, Minn. Filed Mar. 1, 1919, Serial No. 280,063. Renewed Dec. 12, 1919. Serial No. 344,466. 11 Claims. (Cl. 110—95.)

1. A fire arch comprising laterally spaced beams, laterally spaced hanger blocks hung on said beams, and supplemental blocks underlying the respective beams in the spaces between said hanger blocks, the said hanger and supplemental blocks at their lower faces terminating in approximately the same plane and being exposed to the fire.



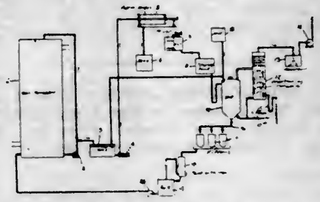
10. A fire arch comprising laterally spaced beams, arch forming blocks detachably hung from said beams, crowning plates detachably seated on the ends of said beams in planes above the upper portions of said hanger blocks, and a wall built on said crowning plates and thereby supported above said hanger blocks.

1,347,515. CLASP FOR NECKLACES AND THE LIKE. JULIUS H. LUTZ, New York, N. Y. Filed Nov. 21, 1919. Serial No. 339,559. 4 Claims. (Cl. 24—230.)



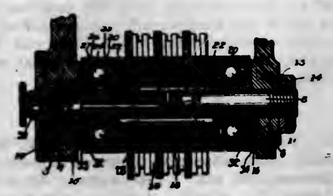
1. In a clasp for necklaces and the like, a casing member, an insert member adapted to be moved within the casing member, a clutching element connected to one of said members and a groove in the other member having a cam portion adapted on axial turning to release the clutching element and permit the separation of the parts.

1,347,516. PERMUTATION-LOCK FOR STEERING-WHEELS. OTTO J. MANTHEY, Toledo, Ohio, assignor, by direct and mesne assignments, to Ralph H. Culley, Rochester, N. Y. Filed June 21, 1919. Serial No. 305,807. 4 Claims. (Cl. 70—53.)



1. In combination, a pair of relatively movable members, a rotatable bolt shaft carried by one of said members and axially movable into and out of locking engagement with the other member, said shaft having an eccentric portion, a collar having an opening of a size corresponding to that of the bolt shaft to permit an axial movement of the shaft therethrough, said collar being adapted to coöperate with the eccentric portion of the shaft and be moved thereby into and out of locking relation to the bolt shaft to permit or prevent an axial movement thereof through the collar, and means operable to coact with said collar to prevent or permit movements thereof transverse to the bolt shaft.

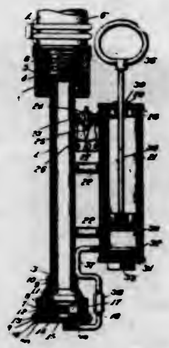
1,347,517. CARRIAGE. ADOLPH K. MEINECKE and ALFRED WILD, Milwaukee, Wis., assignors to Meinecke Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 1, 1917. Serial No. 204,814. 5 Claims. (Cl. 296—28.)



2. A carriage or vehicle having the portion thereof which is above the lower running-gear portion, composed of a woven fabric, the warp strands thereof composed of veneer strips, and the woof strands thereof of flexible twisted paper cord, and a device provided with members receiving therebetween the edges of a woven fabric.

1,347,518. METHOD OF MAKING HYDROCYANIC ACID AND CYANIDS. MAX E. MUELLER, Youngstown, Ohio. Filed Aug. 25, 1919. Serial No. 319,702. 11 Claims. (Cl. 23—1.)

1. The method of converting ferrocyanids to hydrocyanic acid and cyanids, which consists in treating the ferrocyanid with metallic copper in conjunction with an acid capable of reacting with such ferrocyanid and distilling off the hydrocyanic acid thereupon set free.



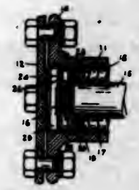
1,347,519. GRINDING-WHEEL DRESSER. ROLAND P. PLACE, Detroit, Mich., assignor to the H-P Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 10, 1919. Serial No. 276,055. 3 Claims. (Cl. 64—36.)

1. In combination, a shaft, an element rotatable thereon and having a cup-shaped recess in one end, an anti-fric-

tion bearing in said recess, said bearing including an outer race, an inner race, and interposed rolling members, an end wall for said recess beyond the bearing, said wall being rigid with the rotatable element and sealing a channel in which the rolling members run, and a washer outside of said end wall of substantially the same diameter as said wall and pressing on the inner race to adjust the bearing and to exclude dirt.

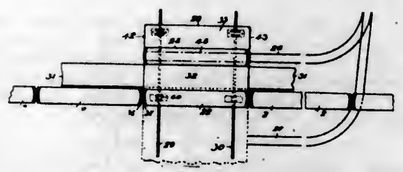
1,347,520. SPRAYING DEVICE. PAUL RASCH, Chicago, Ill. Filed Feb. 5, 1919. Serial No. 275,166. 2 Claims. (Cl. 299—85.)

1. In a spraying apparatus, in combination, a tubular member having ingress and egress openings for the passage of a fluid, a container secured to said tubular member, a piston reciprocatingly fitted in said container, means for establishing communication between the inlet end of said tubular member and the corresponding end of said container, and a pipe leading to the other end of the container, said pipe being adapted to be placed in and out of coacting position with said tubular member.



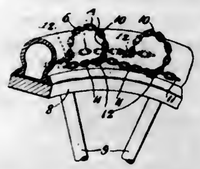
1,347,521. COIL-WINDING FORM. SAMUEL ROGERS, Anderson, Ind., assignor to The Remy Electric Company, a Corporation of Indiana. Filed Jan. 15, 1919. Serial No. 271,289. 9 Claims. (Cl. 242—77.)

1. In a coil winding form, the combination with side flanges of a core comprising separable portions each attached to one of the flanges, said portions having coöperating guiding provisions whereby to cause one flange to move obliquely to the plane of the other flange when the core portions are separated.



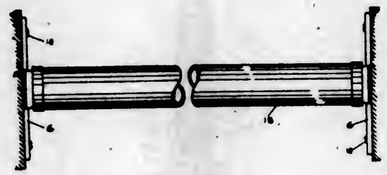
1,347,522. FAN CONSTRUCTION. RALPH C. ROOT, Indianapolis, Ind., assignor to Service Products Corporation, Indianapolis, Ind., a Corporation. Filed May 13, 1919. Serial No. 296,780. 3 Claims. (Cl. 64—39.)

3. A fan construction including a hub member, a spindle extending through said hub member for supporting said construction, a retaining member provided with a bulging surface mounted on the outer end of said construction, and a fan adapted to be rigidly secured to the end of said hub so as to engage the bulged surface of said



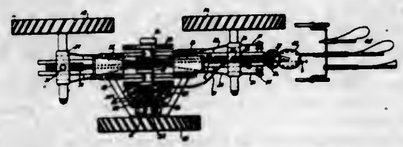
retaining member and yieldingly force it inwardly, whereby said member will be yieldingly forced against said construction for forming a seal and securing the parts thereof in their relative position to each other.

1,347,523. TRAIN-CONTROL SYSTEM. HAROLD ROWNTREE, Kenilworth, Ill., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed Aug. 3, 1917. Serial No. 184,211. 8 Claims. (Cl. 104—25.)



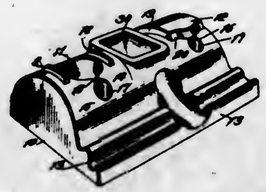
1. A railway system comprising an endless chain of unattached cars, and means for starting and stopping said chain of cars from a single control station.

1,347,524. ANTISKID DEVICE FOR VEHICLE-WHEELS. CHARLES D. SCHMIDT, Jamaica, N. Y. Filed Feb. 3, 1919. Serial No. 274,592. 4 Claims. (Cl. 152—14.)



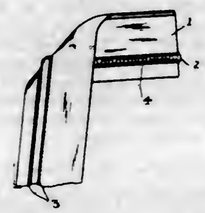
1. The combination with a vehicle wheel, of an antiskid device therefor composed of a series of similar chain sections with hooks at their ends, said assembled section forming retaining rings of less diameter than the tread of said wheel at each side thereof, and a series of cross chain elements extending over the wheel tread from the ring on one side to the ring on the other, said device being attachable to the wheel without deflation of the tire thereof.

1,347,525. CURTAIN-ROD FIXTURE. GEORGE H. SMITH, Providence, R. I., assignor to Charles D. Kenney, Cranston, R. I. Filed May 3, 1920. Serial No. 378,369. 3 Claims. (Cl. 156—22.)



3. The combination with a tubular curtain rod, of a bracket comprising an oblong base, and a flat twisted arm integral with one side edge of the base comprising turns adapted to engage the rod throughout substantially 360 degrees.

1,347,526. FARM-TRACTOR. TRUMAN E. STARK, Aurora, Ill. Filed June 26, 1915. Serial No. 36,533. 8 Claims. (Cl. 180—25.)

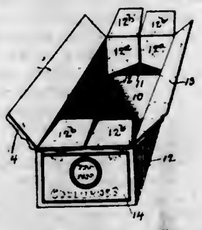


1. In a tractor, in combination, a frame, a pair of carrying wheels swingingly mounted at one side of the frame adjacent its opposite ends, said two wheels being normally in a common plane, a single carrying wheel only mounted at the other side of the frame, the last mentioned carrying wheel having a fixed axis located centrally between the axes of the two first mentioned wheels, a motor and operative driving connection between the motor and the said carrying wheels.

1,347,527. INKSTAND. FRANK A. WEEKS, Plainfield, N. J. Filed Dec. 24, 1917. Serial No. 208,674. 5 Claims. (Cl. 120—57.)

1. An inkstand comprising a base in one integral piece having an upwardly convexed upper surface and containing an inkwell and forwardly disposed dip-chamber communicating with said well and also having at opposite sides of said well transversely disposed shoulders, and a cover conforming to the arcuate outline of the upper surface of said base and having side and end depending flanges engaging the top surface of said base, the side flanges of said cover embracing said shoulders and said shoulders being spaced apart a less distance than the end depending flanges of said cover and adapted on the arcuate movement of said cover to arrest the same in its open and closed positions.

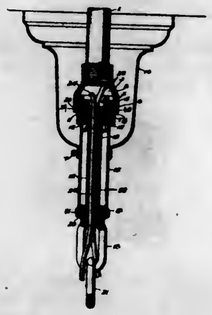
1,347,528. SWEATBAND FOR HATS. JOHN P. WEIS, Nyack, N. Y., assignor to Metropolitan Sewing Machine Corporation, Nyack, N. Y., a Corporation of Delaware. Filed Dec. 15, 1917, Serial No. 207,355. Renewed Jan. 29, 1920. Serial No. 354,885. 6 Claims. (Cl. 2—32.)



1. A sweat band having one or more embossed portions extending lengthwise thereof, and provided with stitches across the same for maintaining the shape thereof.

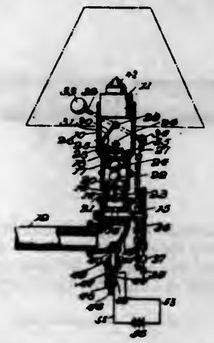
1,347,529. FISHING-REEL. JOHN A. WHERRY, New Orleans, La. Filed Mar. 18, 1919. Serial No. 283,402. 22 Claims. (Cl. 242—84.5.)

21. In a fishing-reel, the combination of a shaft, a drum connected thereto, a disk within the drum, said disk connected to the shaft to revolve therewith, centrifugal weights, springs to oppose said weights, and said weights normally out of engagement with the periphery of said drum, but constructed to fly out into engagement therewith when the shaft is rotated at high velocity by the pull of the line thereon, said weights in the form of segments having friction-surfaces or shoes at their inner ends, a boss or collar normally engaged by said inner shoes, said weights having friction-surfaces or shoes at their outer ends to engage the periphery of said drum, and adjustable springs for said weights.



1,347,530. PACKAGING OF TOBACCO PRODUCTS. JOHN E. WILLIAMSON, Yonkers, and HARRY F. POPKEN and ALFRED G. VALE, New York, N. Y., assignors to American Tobacco Company, a Corporation of New Jersey. Filed May 16, 1917. Serial No. 168,913. 2 Claims. (Cl. 229—40.)

1. A box-like container having a bottom, parallel side walls and parallel end walls in substantially continuous contact with each other along their meeting edges to form a body portion with closed sides and bottom and an open top, a cover therefor comprised of a pair of oppositely foldable flaps united with the side walls but nor-



mally free from each other and from the end walls and adapted when in closed position to have their free longitudinal edge portions parallel to and intermediate the side walls of the container, and a sealing strip of readily ruptured material overlying the longitudinal edges of the top flaps and extending across both ends of said flaps, said strip being adhesively attached to both flaps and to the ends of the container, said sealing strip being of substantially the width of the top of the container and substantially sealing the connections between the top flaps and between said flaps and the ends of the container, the construction being such that the ends and one longitudinal edge of said flaps form guide means along which the strip may be readily ruptured.

1,347,531. ELECTRICAL FIXTURE. FRANK LOWELL BUTLER, Chicago, Ill. Filed Feb. 7, 1920. Serial No. 356,866. 3 Claims. (Cl. 240—85.)

1. In an electrical fixture, the combination of a fixed support, a coupling having its upper end connected to said fixed support and having opposite lateral apertures intermediate its length, said coupling having an internal annular recess at its lower end extending toward its upper end to provide an annular shoulder and an internal annular slot in the recessed portion, a cylindrical insulating sleeve adapted to enter said recess in said coupling and to seat against said shoulder provided therein, said sleeve having a central bore enlarged at the upper end thereof to provide an annular shoulder and an external annular slot near the upper end to register with the internal annular slot in the recessed portion of said coupling, said insulating sleeve also having a recess in its lower end adapted to receive the ends of cylindrical stems of varying sizes, a spring member disposed within the registering slots provided in said sleeve and said coupling, whereby said insulating sleeve is firmly held within the recessed portion of said coupling, a tube having a flanged upper end supported by the annular shoulder provided in the central bore of said insulating sleeve, said tube extending through said insulating sleeve and having its threaded lower end depending therefrom, a hollow stem having its upper end seated in the recess in the lower end of said insulating sleeve, said hollow stem encompassing said tube for a portion of its length and having its inner wall spaced therefrom, an eye member having an internally threaded portion screwed upon the threaded end of said tube and having an annular extension against which the lower end of said stem is seated, whereby the hollow stem is held in operative position, a canopy slidably disposed upon said hollow stem and provided with means for securing the canopy thereto, a socket carrying member connected to said eye member, and conducting means passing through the apertures in said coupling into and through said insulating sleeve, said tube, and said eye member to the socket carrying means.

1,347,532. AUTOMATIC GAS-LIGHTER AND SAFETY CUT-OFF DEVICE. PETER PANIPENTO CATALANO, Dunkirk, N. Y. Filed Aug. 14, 1919. Serial No. 317,577. 4 Claims. (Cl. 67—14.)

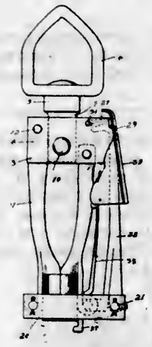
1. A valve including a vertical casing having upper and lower vertically alined valve seats, a pressure actuated valve for the lower valve seat, and a weighted valve arranged directly beneath said upper valve seat and adapted to engage the same as the pressure within the casing increases, said weighted valve being adapted to engage said pressure actuated valve for seating the same as the pressure decreases.

4. In a device of the class described, the combination with a burner having a burner tip at one end, a manually operable valve for the burner, an elongated pilot burner extending from said first named burner and terminating adjacent said tip, a hanger secured to said pilot burner, a ratchet wheel rotatably carried by said hanger, a sparking device arranged adjacent the teeth of said ratchet wheel and adapted to be engaged by the same, a source of electrical energy connected with said ratchet wheel and said sparking device, a lever actuated pawl adapted for engaging said ratchet wheel, and means connected to said manually operable valve and the lever of said pawl whereby the valve and the lever may be operated together.

1,347,533. HOLLOW CHANNEL-BRICK AND WALL CONSTRUCTION. RICHARD BLAIR COOPER, New York, N. Y., assignor to Fiske & Company, Incorporated, a Corporation of Massachusetts. Filed Dec. 14, 1918. Serial No. 266,676. 15 Claims. (Cl. 72—41.)

10. Channel brick of the kind described comprising a body portion and three projecting hollow portions extending at right angles to said body portion and forming two open channels, all three portions being substantially equal in height, and the central portion having ridges overhanging the channels.

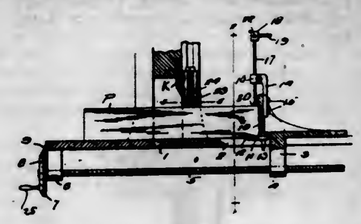
1,347,534. DEVICE FOR TESTING WELLS FOR OIL, GAS, &c. ERNEST H. COX, Duncan, Okla., assignor of one-half to J. W. Chancellor, Bowie, Tex. Filed June 24, 1920. Serial No. 391,302. 2 Claims. (Cl. 166—1.)



1. In a device of the character described, a substantially cylindrical member adapted to be attached to the lower end of a drill stem, said member having a head and a neck and body, said head and neck provided with a plurality of channels traversing the head and neck in

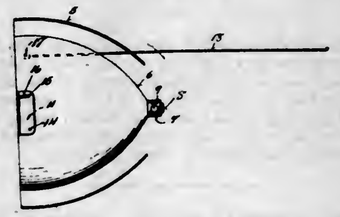
oblique relationship to the body, and opening outward and downward at the neck of the body to admit water, slush, etc., when the drill stem is lowered into the well, the lower end of the body reduced in diameter and extended

into a nipple-like formation, a "packer" or nose thereon, a channel through the head and nipple-like formation, a plunger with a pointed perforated end extending from the lower end thereof, a flexible tube connected to the head and a closure over the bottom of the nose.



1,347,535. WOOD-ROD ELEVATOR. GEORGE F. DAVIS, Ozona, Tex. Filed Mar. 8, 1920. Serial No. 364,237. 6 Claims. (Cl. 294—90.)

1. A rod lift including a head, a pair of jaws supported by the head, one of said jaws being pivoted with relation to the head, an operating arm having connection with the pivoted jaw, means for locking the operating arm for securing the jaws in a clamping position, and means supported by one of the jaws and adapted to engage the material under operation for preventing twisting of the lift with relation to the material under operation.

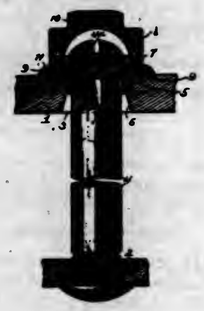


1,347,536. PAPER-CUTTING MACHINE. JAMES H. DOWNIE, San Antonio, Tex. Filed Sept. 10, 1919. Serial No. 322,888. 6 Claims. (Cl. 164—59.)

1. In a paper cutting machine, the combination of a table having longitudinally extending grooves therein, an adjustable paper gage slidably mounted on the table, bottom clamp jaws mounted on the under side of said paper gage, said jaws having their upper faces positioned slightly higher than the upper surface of the table and having

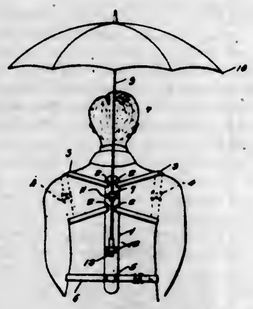
beveled free edges to guide the paper on to the upper surface of the clamp jaws, and a plurality of means for clamping and holding the stack of papers upon said jaws.

1,347,537. HEADLIGHT-ADJUSTING DEVICE. ELMER E. DRUMM, Manitowoc, Wis. Filed July 15, 1919. Serial No. 311,020. 3 Claims. (Cl. 240—41.)



2. A headlight structure comprising a support, a reflector, a hinge having one of its wings secured to the reflector, a pivotal connection between the other wing of the hinge and the support and means for swinging the reflector on said hinge and pivot.

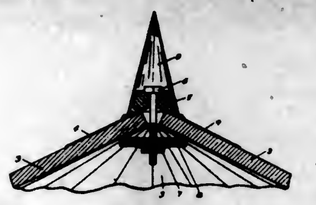
1,347,538. DEVICE FOR AUTOMATICALLY ANNOUNCING ORDERS AND DANGERS TO MOVING TRAINS. FERNANDO ROQUE ELIZONDO, Mexico, Mexico. Filed Nov. 15, 1917. Serial No. 202,212. 4 Claims. (Cl. 246—185.)



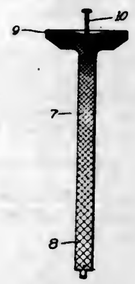
1. In train signaling apparatus, a valve, a spring motor to operate the valve, winding means for the motor including a pivotally mounted element, a lever to move said element in the required direction to wind the motor spring, a signaling element actuated by said lever, a trip element to hold said pivotally mounted element and thereby prevent operation of the motor, and train operated means to actuate the trip element.

1,347,539. STAYBOLT STRUCTURE. JOHN ROGERS FLANNERY and ETHAN I. DODDS, Pittsburgh, Pa., assignors to Flannery Bolt Company, Pittsburgh, Pa. Filed Sept. 10, 1919. Serial No. 322,870. 3 Claims. (Cl. 85—1.5.)

1. In a staybolt structure, the combination with a boiler sheet provided with an opening having a wall which flares outwardly from an intermediate portion of the thickness of the sheet to the outer face thereof, of a bearing sleeve having a tapering portion mounted on said flaring wall, a staybolt having a head mounted in said sleeve, and means fixdly uniting said sleeve to the boiler sheet.



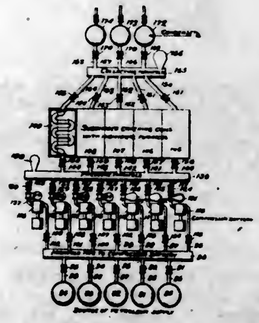
1,347,540. UMBRELLA-HOLDER. JOSEPH J. GODARD, Mobile, Ala. Filed Nov. 29, 1919. Serial No. 341,459. 2 Claims. (Cl. 135—12.)



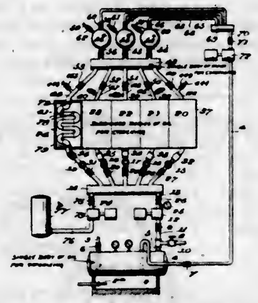
2. An umbrella holder comprising a base of elongated formation, shoulder and waist straps secured to said base and adapted to be adjusted about the shoulders and waist of a person, a block secured to the base adjacent its upper end and having a groove and adapted to receive the staff of an umbrella, a substantially U-shaped clamp secured to the base and straddling the block and staff of the umbrella, a second substantially U-shaped clamp secured to the base adjacent its lower end and adapted to straddle the handle of the umbrella.

1,347,541. ROOF-PEAK. ORA O. HAYNES, Minneapolis, Minn. Filed Mar. 2, 1920. Serial No. 362,864. 1 Claim. (Cl. 108—1.)

In combination with a conical roof, a hood adapted to cover the apex thereof, a block positioned over the apex of said hood, a bolt extending through said block, hood and roof, and means at the lower end thereof for clamping said roof and hood together, a conical cap adapted to cover said block and have its edge tightly secured to said hood.

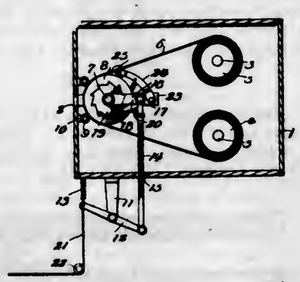


1,347,542. CAST PUPPET-VALVE. FREDERICK HILTY, Waukegan, Ill., assignor to Laurence R. Wilder, Cook county, Ill. Original application filed Mar. 28, 1919, Serial No. 285,866. Divided and this application filed July 3, 1919. Serial No. 308,681. 3 Claims. (Cl. 123—188.)



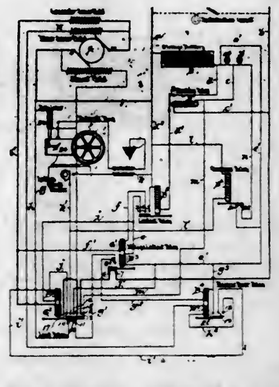
2. An integrally cast metal puppet valve for internal combustion engines which is of varying density, being most dense in the head and least dense at the lower end of the stem.

1,347,543. APPARATUS FOR CRACKING PETROLEUM. HARRY W. JONES, Independence, Kans.; Frank E. Jones, administrator of said Harry W. Jones, deceased, assignor to The Kansas City Gasoline Company, Kansas City, Kans., a Corporation of Kansas. Original application filed May 17, 1916, Serial No. 100,278. Divided and this application filed Feb. 13, 1918. Serial No. 216,937. 1 Claim. (Cl. 196—1.)



A system for cracking petroleum oils, comprising a set of tanks in parallel, a manifold pipe therefor, a battery of compressors in small units, a suction pipe from said manifold to each compressor with a valve therein, a pressure manifold common to said compressors, a discharge pipe from each compressor to said manifold, a valve in each of said pipes, a subdivided set or battery of small cracking still units set in separate furnaces and all fed from said pressure manifold, with separate valved connections thereto, a collecting manifold and separate valved discharge connections from the individual stills thereto and a condensing system connecting to said collecting manifold, and adapted to deliver the condensed products to the usual receiving devices.

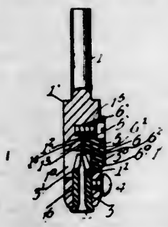
1,347,544. METHOD OF TREATING HYDROCARBONS. HARRY W. JONES, Independence, Kans.; Frank E. Jones, administrator of said Harry W. Jones, deceased, assignor to The Kansas City Gasoline Company, Kansas City, Kans, a Corporation of Kansas. Original application filed May 27, 1916, Serial No. 100,278. Divided and this application filed Feb. 13, 1918. Serial No. 216,938. 2 Claims. (Cl. 196—25.)



1. The process of cracking petroleum oils, comprising the following steps: first, vaporizing the oil at low or atmospheric pressure, then compressing it by the use of external energy, then subdividing and feeding the compressed oil into separately heated cracking zones and maintaining high heat and pressure in each subdivided body independently of the others, then separately discharging the cracked products and collecting the same together and then condensing the aggregated product.

1,347,545. STREET-INDICATOR FOR CARS. LANDON C. KASBAUM, Laporte, Ind. Filed Oct. 26, 1916. Serial No. 127,877. 1 Claim. (Cl. 40—87.)

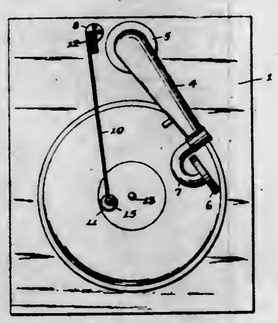
An indicator of the type described comprising a housing having an opening therein, a web, rollers in the housing for carrying the web, a large roller adjacent the opening for receiving the web intermediate the aforementioned rollers, idler rollers bracketed to the housing above and below the opening and to each side thereof and in line with the upper and lower edges for disposition forward of and bearing against the large roller whereby to smooth out and facilitate movement of the web thereover, a spur wheel on the larger roller, a vertically disposed and vertically movable shaft extending into the housing, an arcuate pawl pivoted to the shaft and engaging the spur wheel to advance the large roller, and a leaf spring pivoted to the shaft below and in line with the pivot point of the pawl and having a curvature opposite to the curcature of the pawl whereby to positively press the pawl at all times although exerting a smooth and minimum frictional contact upon the pawl for the purpose set forth.



1,347,546. ELECTRIC SYSTEM. EVERETT P. LARSH, Dayton, Ohio, assignor to The Burnett-Larsh Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed June 21, 1915. Serial No. 35,390. 15 Claims. (Cl. 290—30.)

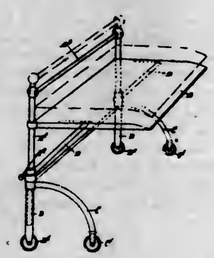
2. In an electrical system as described, the combination of an explosive engine, a generator normally driven by the engine and supplying current to the hereafter mentioned distribution circuit and battery, for the purpose of recharging said battery preparatory to the next starting operation, a battery of lower voltage than the normal operating voltage of the generator, a special low voltage motor series field winding in said generator, a distribution circuit, and normally open intermediate connections automatically actuated by the closing of the distribution circuit by which the battery may be electrically connected with the special low voltage field winding to operate the generator as a motor for the purpose of starting the engine.

14. In an electrical system as described, a distribution circuit, a generator supplying current to the said circuit, a battery supplied by said generator, means for electrically connecting the battery with the generator upon the closing of the distribution circuit, and electrically operated means controlled by battery current for maintaining the connection between the battery and generator subsequent to the opening of the distribution circuit.



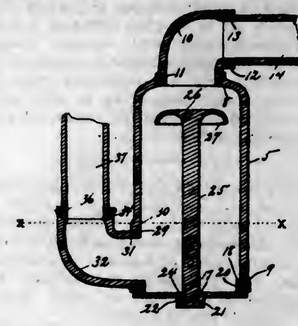
1,347,547. JEWELER'S PIN-POINTER. JOSEPH ALRICK LEGRANDEUR, Toronto, Ontario, Canada. Filed May 6, 1919. Serial No. 295,140. 3 Claims. (Cl. 10—21.)

1. A jeweler's pin pointer comprising a revolving member having a pin receiving orifice extending axially there-



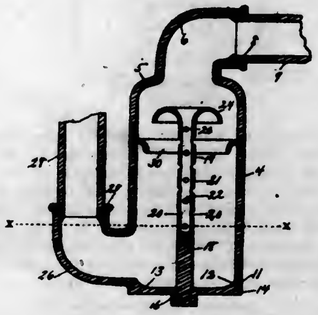
into, a cutter having its cutting edge inclined to correspond with the taper of the pin point and against which the pin is carried by longitudinal pressure and means extending longitudinally of the pin and forming a bed for the pin extending from the extreme point of the pin when the cutting operation is completed and whereby the pin is held rigidly in position against the pressure produced by the operation of the cutter preventing the springing of any portion of the pin out of the cutting position.

1,347,548. RECORD-LIFTER. JOSEPH MENCHEN, New York, N. Y., assignor to Vacuum Record Lifter, Ltd., New York, N. Y., a Corporation of New York. Filed Nov. 23, 1918. Serial No. 263,822. 8 Claims. (Cl. 294—64.)



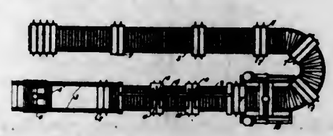
1. A lifting device suitable for lifting disk records from the turntable of a phonograph, comprising an overhanging tilting arm, depressible, and having means for resiliently raising and sustaining it, and a flexible suction cup on said arm, said cup having a flexible open mouth and depending upon its collapsibility for its suction effect and being capable of flexing sidewise without releasing its grip.

1,347,549. DEVICE FOR SUPPORTING AND CARRYING INVALIDS OR PATIENTS. LUCY DEPERE MOTE, Westminster, London, England. Filed Oct. 29, 1919. Serial No. 334,289. 4 Claims. (Cl. 5—44.)



1. An apparatus for the purpose described comprising a frame including an upright section and a base section that extends laterally from the upright section, and a flat table-like support including a relatively thin rigid plate member permanently connected with and extending horizontally from the frame, so that it may extend on to and lie throughout its width close against the top of a mattress on a bed, whereby a patient may be rolled from the mattress on to said support, or vice versa, without being lifted or affecting the connection between the frame and said support.

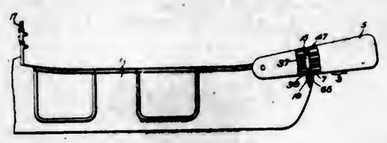
1,347,550. WASTE-TRAP. ALBERT S. NEWTON, Providence, R. I. Filed Mar. 1, 1920. Serial No. 362,458. 3 Claims. (Cl. 182—12.)



1. In a waste trap, a body, an inlet pipe near the bottom of the body, an outlet pipe in the upper portion of the body, a vertical post in the body, and a baffle plate on the top of the post below the outlet pipe.

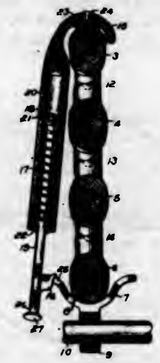
1,347,551. WASTE-TRAP. ALBERT S. NEWTON, Providence, R. I. Filed Mar. 1, 1920. Serial No. 362,459. 3 Claims. (Cl. 182—12.)

1. In a waste trap, a body, an inlet pipe near the bottom of the body, an outlet pipe in the upper portion of the body, and a post fast to the bottom of the body comprising a solid lower portion, a tubular upper portion provided with perforations, and an open baffle upon the top of the tubular portion between the inlet pipe and outlet pipe.



1,347,552. METHOD OF AND APPARATUS FOR MAKING AND HANDLING CASTINGS. CLARENCE K. PRINCE, Westfield, Mass. Filed Aug. 9, 1919. Serial No. 316,468. 4 Claims. (Cl. 22—64.)

1. An apparatus as described, for continuously carrying out the assembling and casting operations which include a device having a horizontal platform for receiving and assembling molds thereon, and including the mold assembling devices for the flask and molds on a single track gravity runway having horizontal and inclined portions for causing the movement of the assembled flask along



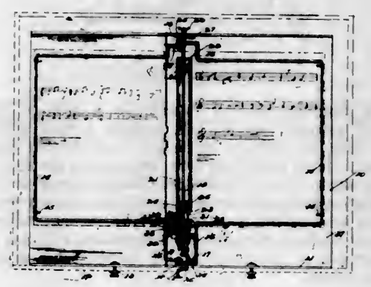
the same, then weighting and pouring the flask on the horizontal portions, then transferring the poured flask along the runway in a straight line to a point in the track at which point means are employed for automatically discharging the contents of the flasks and finally returning the emptied flasks onto the same single track to the original mold forming position or platform.

1,347,553. FOLDING TOP FOR VEHICLES. WILLIAM S. RAWSON, Bridgeport, Conn. Filed Oct. 23, 1916. Serial No. 127,062. 3 Claims. (Cl. 296—128.)

3. In a folding top for vehicles, the combination of a plurality of bows which are stacked above one another when the top is lowered and folded, said bows including one which is inverted and in a generally horizontal position when the top is unfolded and raised, and means to hold said bows in folded relation, said means including an arm and a universal joint connecting said arm to said bow and permitting said arm to be superimposed upon the upper side of such bow when the top is unfolded and raised, said joint including two pivots at right angles to each other, one of said pivots extending between such bow and the bow therebelow when the top is lowered and folded.

1,347,554. FOLDING TOP FOR VEHICLES. WILLIAM S. RAWSON, Bridgeport, Conn. Filed Oct. 22, 1917. Serial No. 197,783. 2 Claims. (Cl. 296—128.)

1. In a folding top for vehicles, the combination of a set of bows, a bow-support provided with a depression to receive the lowermost bow and having a lateral projection provided with an opening at one side of said depression, two telescopically arranged members one of which is hollow and the other working therein, said members being provided with oppositely facing hooks, one of which engages the uppermost bow and the other of which enters said opening and engages said bow-support, and one of said members being provided with a handle for relatively extending said members, and a spring located within one of said members and tending to collapse said members and to draw said hooks toward each other thereby to urge said bows toward said support.

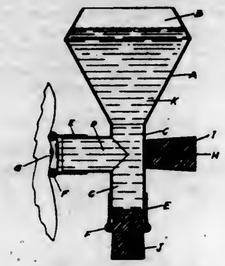


2. In a folding top for vehicles, the combination of a set of bows, a bow-support provided with a depression to receive the lowermost bow and provided also with an opening at one side of said depression, a pair of oppositely facing hooks, one engaging the uppermost bow and the other entering said opening and engaging said bow-support, two collapsibly connected members carrying said hooks, respectively, one of said members being provided with a handle having a pair of laterally projecting portions, and a spring connected to said members and tending to draw said hooks toward each other thereby to urge said bows toward said support.

1,347,555. DENTAL ATTACHMENT. CHARLES N. REESE, Wilmette, Ill. Filed Dec. 17, 1919. Serial No. 345,636. 6 Claims. (Cl. 32—12.)

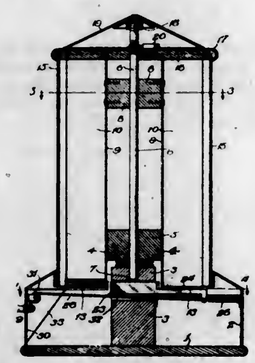
1. An attachment of the character described comprising an anchor member, and an attaching member having a base and a pair of angularly disposed prongs, and lugs on the prongs for pivotally engaging the attaching member to the anchor member.

1,347,556. MUSIC-TURNING DEVICE. HOMER B. RUSSELL, Walnut Grove, Ala. Filed Oct. 28, 1919. Serial No. 334,005. 5 Claims. (Cl. 84—135.)



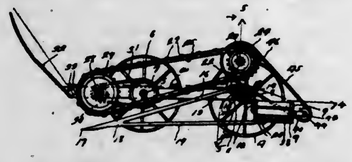
1. A music turning device including a plurality of supports having pivoted arms provided with superposed lugs, a vertically arranged spindle having one end portion screw threaded, a spring actuated member surrounding said spindle, a pair of spaced parallel rods connected to said spring actuated member on opposite sides of said spindle, a vertically movable and rotatable operating member having threaded engagement with the threaded portion of said spindle and slidably receiving said spaced parallel arms, radially disposed arms carried by said operating member and adapted to successively engage said superposed lugs, and a trigger alternately engaging said spaced parallel rods.

1,347,557. CORN AND CALLUS TREATING DEVICE. HENRY E. SCHINDLER, Sisseton, S. D. Filed Mar. 1, 1920. Serial No. 362,603. 3 Claims. (Cl. 128—172.)



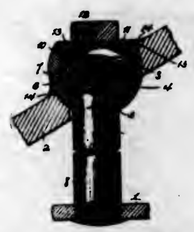
1. A device of the class described consisting of a hollow liquid container, a vertical spout extending down-

wardly therefrom, a side spout extending horizontally from said vertical spout, nipples secured at the ends of



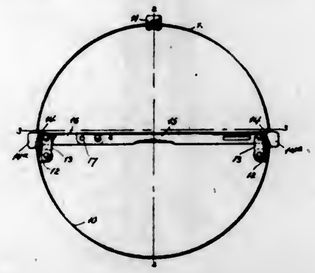
said spouts, a stopper adapted to be secured in either of said spouts.

1,347,558. VENDING DEVICE. ARTHUR BERNARD SIMON, Chicago, Ill. Filed Nov. 6, 1919. Serial No. 336,037. 6 Claims. (Cl. 211—8.)



1. A vending machine comprising a base, a central support secured thereto, said support having a central guide bore, a vertically extending shaft having one end disposed within said guide bore, rectangular blocks secured to the shaft, one of said blocks being arranged to bear on said support, and a plurality of sheet metal members bent to form series of relatively large compartments and series of smaller compartments alternating with the larger compartments, said sheet metal members being secured to said blocks.

1,347,559. CORN GATHERING OR HARVESTING MACHINE. WAYNE SMOLLEY, Brookville, Ind. Filed Sept. 12, 1918. Serial No. 253,766. 2 Claims. (Cl. 56—112.)

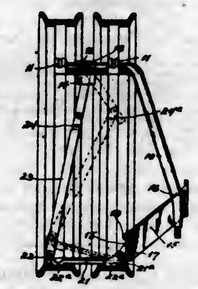


1. In a gathering machine, the combination with a substantially rectangular frame, said frame being supported by wheels in a substantially horizontal plane, downwardly and forward extending spaced fingers having their forward ends disposed adjacent the ground, rearwardly extending braces for said fingers and extending in substantially a horizontal plane, cutting mechanism adjacent the under surface of the rear ends of the fingers, said fingers forming means for separating the stalks from each other during a gathering operation and also forming means for guiding the ears toward the cutting mechanism, an endless conveyer disposed on an inclined plane over the fingers and means whereby said conveyer will be moved at a greater speed than the speed of advance of the machine as a whole so that the ears of corn will be passed rearwardly to the cutter bar without uprooting the stalk as a whole.

1,347,560. STAYBOLT STRUCTURE. BENJAMIN E. D. STAFFORD and ETHAN I. DODDS, Pittsburgh, Pa., assignors to Flannery Bolt Company, Pittsburgh, Pa. Filed Apr. 30, 1919. Serial No. 293,629. 17 Claims. (Cl. 85—1.5.)

1. In a staybolt structure for boilers, the combination with a boiler sheet provided with an opening, of a sleeve or bushing adapted to have initial universally movable mounting in said opening and having an interior bearing for the head of a staybolt, a staybolt having a head mounted on the interior bearing of said sleeve bushing and means for securing said sleeve or bushing to the boiler sheet.

1,347,561. TIRE-CARRIER FOR AUTOMOBILES. CHARLES C. STEEL and THOMAS H. LYNN, Williamsport, Pa. Filed Aug. 25, 1919. Serial No. 319,601. 3 Claims. (Cl. 224—29.)



1. In a spare rim carrier, the combination of a curved support, fixed lugs at the upper part thereof for engaging the rim, two links oppositely disposed, and each pivoted at one end to the inner surface of said curved support, a saddle secured to each link at the free end of the latter and straddling the support, each saddle adapted to engage the sides of a rim seated on the support and a toggle lever for moving the two links into and out of rim locking position.

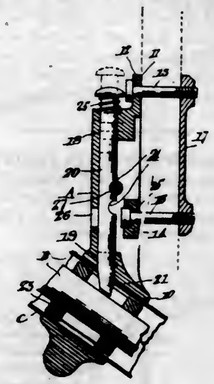
1,347,562. SPARE-RIM CARRIER FOR AUTOMOBILES. CHARLES C. STEEL and THOMAS HERBERT LYNN, Williamsport, Pa. Filed Oct. 10, 1919. Serial No. 329,838. 3 Claims. (Cl. 224—29.)

1. In a spare rim carrier, the combination of two standards, each having a rim supporting member at its upper end, a cross bar connecting the rim supporting

members, a clamping arm located below and in a plane between the two upper supports, a vertically adjustable bracket to which the said arm is pivotally connected, a toggle lever pivotally connected at its upper end to the

cross bar intermediate the two upper supports, and means for detachably connecting the lower end of said toggle lever to the rear end of the clamping arm, whereby the latter can be adjusted to carry rims of different diameters.

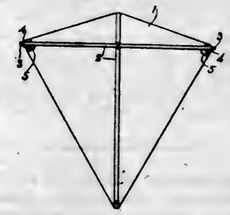
1,347,563. MOP FRAME AND HANDLE COUPLING. FRANKLIN P. TOOF, Paducah, Ky. Original application filed Apr. 17, 1916. Serial No. 91,769. Divided and this application filed Dec. 21, 1917. Serial No. 208,266. 5 Claims. (Cl. 287—11.)



1. In a mop, the combination of handle, a frame, and a coupling formed of a single elongated piece of metal overturned intermediate its ends and embracing a section of said frame, and the end portions of said coupling being transversely bent to form complemental socket portions adapted to embrace the end of said handle.

2. In a mop, the combination of a frame having a transverse bearing section, a handle for the frame having screw threads on one end, and a coupling comprising a single blank of metal having an enlargement intermediate its ends and overturned to form a cylinder at said enlargement and having its end portions transversely arcuated to form complemental socket sections and having screw threads in the walls of the socket sections, and means for securing the socket sections together for the reception of the detachable threaded handle.

3. In a mop, in combination with a handle and a frame, a coupling formed of a single length of sheet metal bent transversely at opposite ends and overturned with the bent ends together to provide complemental socket portions adapted to receive the end of the handle, said overturned portion of the metal being rounded and adapted to engage the frame for hinging the coupling thereto.



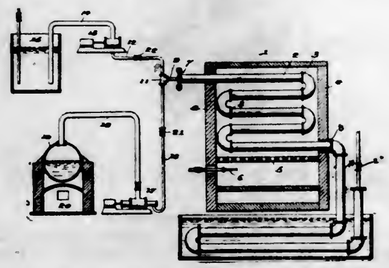
1,347,564. STEERING-WHEEL LOCK. WILLIAM BENSON TURNER, Ottawa, Ontario, Canada. Filed Dec. 26, 1919. Serial No. 347,410. 1 Claim. (Cl. 70—90.)

A locking device for automobiles having a collar adapted to engage a casing of a steering spindle, pins securing the locking device in position, a vertically disposed locking pin slidably mounted in the locking device and forming a cover member for the said pins, a spring encircling the upper end of the locking pin designed to hold the locking pin in unlocked position, the said pin having

peripheral recesses and a transversely extending locking bolt coacting with the recesses to hold the locking pin in the desired position.

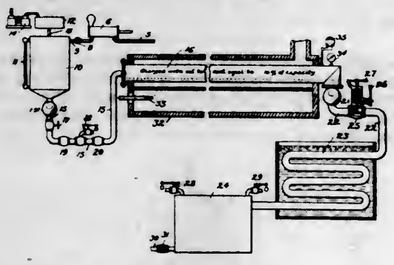
1,347,565. KITE. GEORGE D. WANNER, Dayton, Ohio. Filed Feb. 14, 1920. Serial No. 358,582. 2 Claims. (Cl. 244—22.)

1. In a kite, the combination, with a frame, of a kite cover, patches secured thereto and cover-mounting loops secured to the cover by means of said patches, the loops being adapted to secure the cover to the frame.



1,347,566. DRINKING-FAUCET. ERNEST E. WANGELIN, Belleville, Ill., assignor to Twentieth Century Brass Works, Belleville, Ill., a Corporation of Illinois. Filed Aug. 29, 1919. Serial No. 320,642. 2 Claims. (Cl. 299—15.)

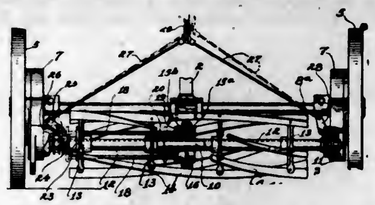
1. A drinking faucet comprising a cup communicating at one end with a suitable source of water supply, a screw-cap or lid closing the top of the cup, said lid being formed with an elongated open ended passage-way communicating respectively with the interior and outside of the cup, said passage-way being disposed across the axis of the cup and lid, a regulator valve interposed between the water supply source and chamber of the cup, and a



hood or cowl leading from the outer boundaries of the lid and extending circumferentially partially around the lid to envelop the sides and top portions of the bottom of the stream issuing from the passage-way, the hood terminating at the top in a reduced portion extended in the line of the axis of the cup to a point to intercept the lips of the drinker approaching the stream from the top, the sides of the hood preventing approach of the stream from the sides.

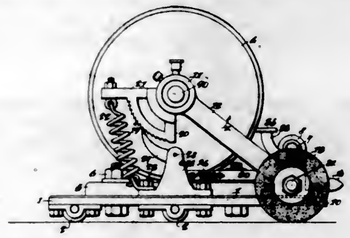
1,347,567. OIL-REFINING APPARATUS. FRANK E. WELLMAN, Kansas City, Kans., assignor to The Kansas City Gasoline Company, Kansas City, Kans., a Corporation of Kansas. Filed Aug. 1, 1916. Serial No. 112,531. 1 Claim. (Cl. 196—14.)

Apparatus for cracking hydrocarbon oil, which includes a cracking coil of large diameter, an inlet pipe of smaller diameter, means to pump oil through said inlet pipe, to expand into the cracking coil, a cooling coil of uniform diameter at the outlet end of the cracking coil, and a reduced pipe containing a controlling valve at the end of said cooling coil, with a cooling bath for said cooling coil.



1,347,568. METHOD OF CRACKING HYDROCARBONS. FRANK E. WELLMAN, Kansas City, Kans., assignor to The Kansas City Gasoline Company, Kansas City, Kans., a Corporation of Kansas. Filed Feb. 12, 1919. Serial No. 276,677. 1 Claim. (Cl. 196—25.)

The process of treating hydrocarbon oil which consists in heating the same to a high temperature and under a high pressure in a retort containing a volume of the hydrocarbon oil equal to ten per cent. of the total volume of the retort with gas under pressure filling the retort over the oil, blowing out the cracked product under pressure, and trapping back the gas so as to retain it in the retort.



1,347,569. LAWN-MOWER. CHARLES C. WORTHINGTON, Dunfield, N. J., assignor to Shawnee Mower Company, New York, N. Y., a Corporation of Pennsylvania. Filed Dec. 20, 1915. Serial No. 67,699. 9 Claims. (Cl. 56—7.)

9. In a lawn mower, a cutter shaft having a clutch-member fast thereon, a cutter reel concentrically mounted with respect to said shaft and inclosing the same and including a housing for said clutch-member and provided

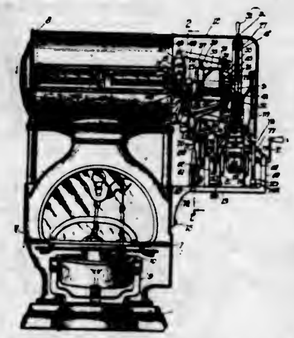
with a complementary clutch element adapted for engagement with said shaft clutch member within the housing.

1,347,570. LETTER-CUTTING MACHINE. FRANCES MATTHEW YOUNG, Danville, Ill. Filed Aug. 15, 1919. Serial No. 317,722. 4 Claims. (Cl. 51—11.)

1. In a letter cutting machine, a support, a motor, a cutting tool, means for mounting the said tool toward and from the work, means tending to constantly move the tool from the work, a check device for countering the action of the said moving means and a release assembly coöperative with said check device to release the same and thereby permit the said moving means to freely act.

1,347,571. TELEMETER. WALTHER BAUERSFELD, Jena, Germany, assignor to The Firm of Carl Zeiss, Jena, Germany. Filed Oct. 6, 1914. Serial No. 865,406. 4 Claims. (Cl. 88—2.7.)

1. In a telemeter containing two base-lines differing from zero an objective system, a reflecting system, the members of which are adapted to be brought into two different relative positions, each base-line belonging to one such position of the said members, the relative location of the two images of an infinitely distant object presented to the observer by the telemeter remaining unaltered, on passing from the use of one base-line to the use of the other base-line, independently of the relative position of those members of the reflecting system, which are fixed together, and range-indicating means.



2. In a telemeter containing two base-lines differing from zero an objective system, a reflecting system, the members of which are adapted to be brought into two different relative positions, each base-line belonging to one such position of the said members, the relative location of the two images of an infinitely distant object presented to the observer by the telemeter remaining unaltered, on passing from the use of one base-line to the use of the other base-line, independently of the relative position of those members of the reflecting system, which are fixed together, and range-indicating means compris-

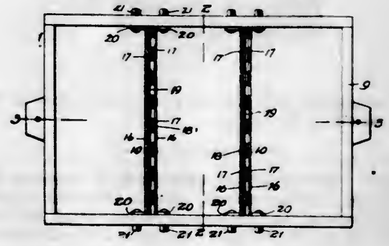
ing two scales, one such scale being based on one of the said base-lines, while the other scale is based on the difference between the two base-lines.

3. In a telemeter containing two base-lines differing from zero and having opposite signs, an objective system, a reflecting system, the members of which are adapted to be brough into two different relative positions, each base-line belonging to one such position of the said members, the relative location of the two images of an infinitely distant object presented to the observer by the telemeter remaining unaltered, on passing from the use of one base-line to the use of the other base-line, independently of the relative position of those members of the reflecting system, which are fixed together, and range-indicating means.

4. In a telemeter containing two base-lines differing from zero and agreeing as to their absolute value, two objectives, an objective reflecting system located at either end of the telemeter and consisting of an optical square and of a central reflector, each optical square, when used in connection with one of the base-lines, being adapted to transmit, together with the central reflector lying at the same end of the telemeter, and, when used in connection with the other base-line, being adapted to transmit, together with the central reflector lying at the other end of the telemeter, the rays entering the optical square to that objective, which lies at the same end as the central reflector, the relative location of the two images of an infinitely distant object presented to the observer by the telemeter remaining unaltered, on passing from the use of one base-line to the use of the other base-line, independently of any variation of an angle of deflection of either optical square or of either central reflector, and range-indicating means.

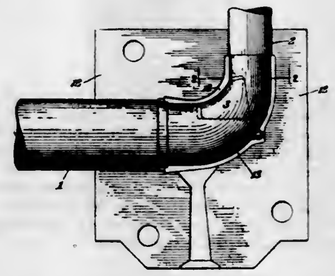
1,347,572. AUTOMATIC SCALE WITH PRICE AND WEIGHT PRINTING ATTACHMENT. HARRY S. BERGEN, Toledo, Ohio, assignor, by mesne assignments, to Toledo Scale Company, Newark, N. J., a Corporation of New Jersey. Filed Oct. 14, 1912. Serial No. 725,728. 33 Claims. (Cl. 265—37.)

1. A computing scale comprising a weighing mechanism and an indicator giving values for different weights at varying prices per unit of weight, a member connected to the weighing mechanism and moved thereby according to the weight of the load on the scale, an element movable independently of said member and controlling the value indicator, and a manually-controlled member normally spaced from said element and adapted to be adjusted according to the price per unit of weight of the commodity constituting the load, said element in its movement directly engaging and being controlled as to position jointly by said members, and means for moving said element.



1,347,573. SPARK-PLUG CLEANER. WALTER L. BOARDMAN, Decatur, Ill. Filed Aug. 11, 1919. Serial No. 316,661. 2 Claims. (Cl. 7—17.)

2. A spark-plug cleaning tool comprising a blade having a predetermined thickness equal to the proper spacing of the points of the plug, whereby the same may function as a gage to set the points during the filing thereof, said blade having file teeth on one face and its opposite face

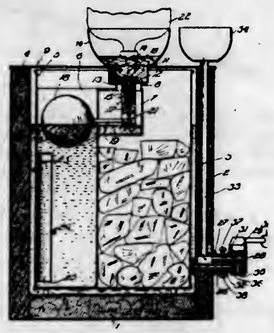


smooth so that it may engage and slide on the straight point of the spark plug while the file teeth are acting upon or cutting the end of the usual right-angled point of the spark plug.

1,347,574. FLASK-BAR. ROYER S. BUCH, York, Pa. Filed July 29, 1919. Serial No. 313,984. 12 Claims. (Cl. 22—111.)

1. A flask bar including a plate having portions split so as to provide tongues, said tongues being bent laterally therefrom; substantially as described.

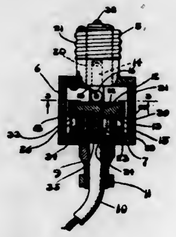
1,347,575. CORE FOR CASTING CURVED TUBULAR BODIES. GEORGE WALDEMAR BUNGAY, Brooklyn, N. Y., assignor to Acme Die Casting Corporation, a Corporation of New York. Filed Apr. 21, 1920. Serial No. 375,488. 15 Claims. (Cl. 22—169.)



6. A core for casting tubular bodies in longitudinally curved elbow form, such core comprising outer core members for forming the outer curve of the core, and an inner core member for forming the inner curve of the core.

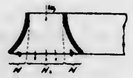
12. A three-piece core for casting tubular elbows, such core comprising two outer core pieces for forming their outer curve of the core, and a third core piece for forming the inner curve of the core.

1,347,576. LIQUID MIXING AND DELIVERY APPARATUS. HARRY S. CORNISH, Chicago, Ill. Filed Mar. 6, 1917. Serial No. 152,718. 7 Claims. (Cl. 225—21.)



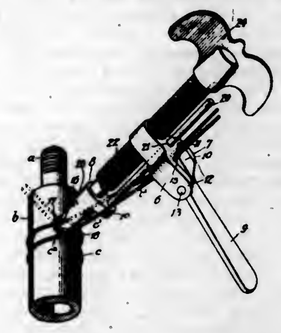
1. In a liquid dispensing apparatus, a cooling chamber, a tank therein, a faucet, a connection from the faucet to the tank, a cup mounted on the cooling chamber above the tank and adapted to receive a bottle in inverted posi-

tion therein and to form a liquid seal therefor, connections between the cup and the tank including a valve seat, a



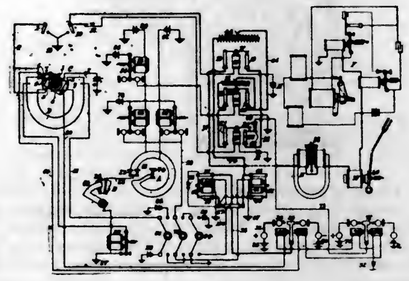
valve coöperating with the valve seat, and a float in the tank controlling the valve.

1,347,577. SWIVEL-PLUG CONNECTOR. EDWARD DEWALD, Sr., Cincinnati, Ohio, assignor of one-half to Edward Dewald, Jr., Cincinnati, Ohio. Filed Dec. 26, 1919. Serial No. 347,365. 2 Claims. (Cl. 173—359.)



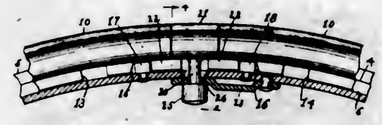
1. A plug body, a disk in said body having an axial projection from one face and contact rings on its upper and lower faces, conducting means for rotatably mounting said disk to turn on said lower ring, connection means for said rings including terminals on said axial projection, a terminal inclosing sleeve fitting over said projection and spring contact means on the body coöperating with the upper contact ring to hold the disk against the rotatable connecting means.

1,347,578. HYDRAULIC PROCESS OF AND APPARATUS FOR CONVERTING ENERGY. HANS BAUDISCH, Vienna, Austria, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed May 8, 1916. Serial No. 96,731. 13 Claims. (Cl. 253—141.)



1. The process of translating energy contained in a stream of water to energy of another form which consists in modifying the flow through a rotor located within said stream whereby independent of the effect of the centrifugal force on the flow of a deceleration thereof would tend to be produced.

1,347,579. HOSE-CLAMP TOOL. BERNHARDT HENRIKSON, Chicago, Ill. Filed Sept. 21, 1918. Serial No. 255,183. 4 Claims. (Cl. 81—9.3.)

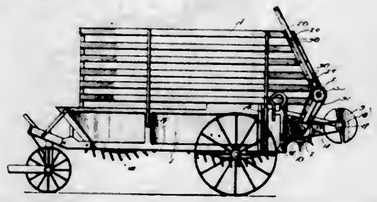


3. In a hose banding tool, the combination of a short transverse frame having in vertical alinement a threaded orifice, a smooth orifice and a stationary clamp jaw, a threaded stem extending through said threaded orifice and having at one end a turn-handle, a head swiveled on the other end of said stem and having a cross-grooved nose, a guide rod fixed to said head extending through the smooth orifice of the frame and back nearly to the turn-handle, and a clamp lever coacting with said clamp-jaw and adapted to clamp both limbs of a hairpin-wire.

1,347,580. PRINTING-TELEGRAPH. GEORGE S. HILTZ, Brooklyn, N. Y., assignor to Stock Quotation Telegraph Company, a Corporation of New York. Filed Oct. 24, 1918. Serial No. 259,507. 9 Claims. (Cl. 178—34.)

1. In a page printing telegraph system of the kind described, the combination with a keyboard, a sunflower, a rotary circuit controller and a clutch magnet operated by currents through the sunflower segments to arrest the circuit controller, of relays operated by the keys, according to the characters which they represent and resistances adapted to be thrown into or out of the line circuit by said relays to cause currents of such different strengths to flow over the single line circuit as will produce the operations necessary in the receiver for printing, feeding and other control of the parts thereof.

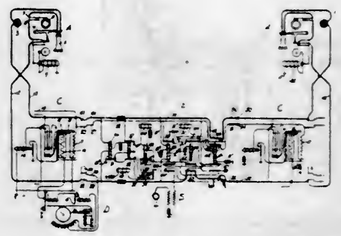
1,347,581. VEHICLE-WHEEL RIM. OTTO H. JOESKI, Cleveland, Ohio, assignor to The Standard Parts Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 30, 1917. Serial No. 183,393. 7 Claims. (Cl. 152—21.)



1. The combination with a wheel rim; of a split side flange removably mounted on said rim; and means for locking said flange to said rim, said means including a separable member adapted to engage the juxtaposed ends of said flange, and a member movably attached to said rim independently of, but adapted to engage with said first-named member and lock the same to said rim.

1,347,582. CENTRIFUGAL CASTING-MACHINE. JAMES B. LADD, Ardmore, Pa., assignor to United States Cast Iron Pipe and Foundry Company, Burlington, N. J., a Corporation of New Jersey. Filed Nov. 1, 1918. Serial No. 260,657. 5 Claims. (Cl. 22—65.)

1. In a centrifugal casting machine the combination with a rotary mold and the supporting framework therefor, of ball bearings between said framework and the ends of the rotary mold, each of said bearings comprising inner and outer bearing members, the two bearing members of one bearing, and one bearing member of the other bearing, being formed each with a circumferential groove serving as a raceway for the bearing balls, and the fourth bearing member having a cylindrical ball engaging surface whereby bodily axial displacement of the mold relative to the framework is prevented while thermal expansion and contraction of the hold is permitted.



1,347,583. COMBINATION MANURE AND STRAW SPREADER. HENRY L. LITCHFIELD, Waterloo, Iowa. Filed May 7, 1919. Serial No. 295,285. 44 Claims. (Cl. 275—5.)

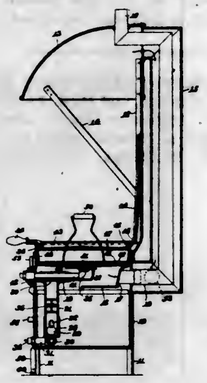
1. The method of progressively converting a mass of loose material into a light stream of scattered elements, which consists in moving the mass toward a disintegrating and scattering device with a slow rotary motion.

42. The method of distributing a deep mass of loose material which consists in supporting said mass from below and applying a force to the bottom thereof directed toward and adapted to move the mass bodily toward a distributing point, and applying upwardly-directed forces to the upwardly-extending face of the mass at and above said discharge point on the side toward the discharge point at a plurality of different elevations along said face.

1,347,584. AUTOMATIC TELEPHONE SYSTEM. TALBOT G. MARTIN, Chicago, and EMIL JACOBSEN, Evanston, Ill., assignors to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 14, 1917. Serial No. 148,478. 21 Claims. (Cl. 179—18.)

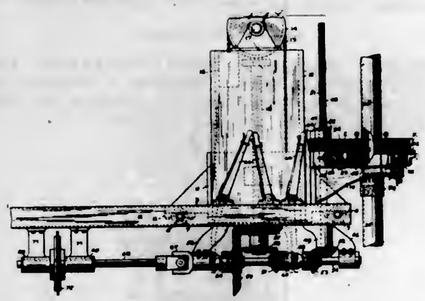
21. In a telephone system, a calling and a called line, an automatic switch having line wipers for connecting said lines, a test wiper in said switch, a relay for supplying signaling current through its winding to said called line via one of said line wipers, and means for energizing said relay via said test wiper if the called line is busy.

1,347,585. RESILIENT, NON-PUNCTURABLE, AND DEMOUNTABLE TIRE. FREDERICK A. MECKERT and LOUIS E. BOCK, Philadelphia, Pa. Filed Apr. 25, 1918. Serial No. 230,783. 2 Claims. (Cl. 152—8.)



1. A tire composed of a hollow body comprising a shoe, a rim of rigid material within the shoe adjacent the inner periphery thereof, a rim within the shoe adjacent the tread thereof, resilient means in said body between said rims and unattached thereto, said rims and resilient means being insertible in said body through the open inner periphery thereof, members substantially doubly angular in cross section having portions engaging the inner peripheral portion of said body and other portions engageable with a felly, and means passed through the body engaging portions of said members and through the first-named rim.

1,347,586. STOVE. LEON MITCHELL, Dorchester, Mass. Filed Dec. 6, 1919. Serial No. 344,220. 10 Claims. (Cl. 126—39.)

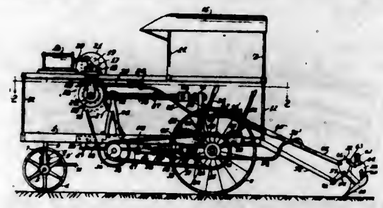


1. In a device of the class described, a kettle for fat provided with a flat bottom having a central depression therein; a screen pivoted to a wall thereof slightly below the top thereof and below the upper surface of the fat contained therein; a frame in the open top of which said

kettle is adapted to be positioned; a heating device within said frame beneath said kettle; and a drain pipe for said

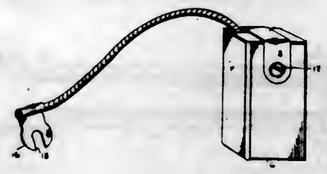
kettle extending from said depression through the wall of said frame.

1,347,587. DRILLING AND OIL-WELL APPARATUS. ROBERT R. POLLAK, San Francisco, Calif. Filed Nov. 14, 1914, Serial No. 872,126. Renewed Jan. 26, 1920. Serial No. 354,252. 9 Claims. (Cl. 255—19.)



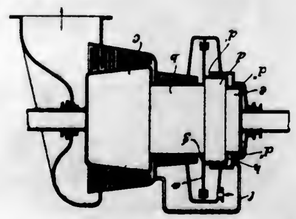
5. In combination, a runway, a carriage thereon, a roller base carried by said carriage, a gear plate revolving on the rollers of said base and having a removable segment, the inner surface of the gear plate being formed with dove-tailed grooves, and flaring grips in said grooves.

1,347,588. ELECTRIC STORAGE BATTERY. FREDERICK W. RADELL, Glenside, Pa. Filed Dec. 27, 1919. Serial No. 347,767. 4 Claims. (Cl. 204—29.)



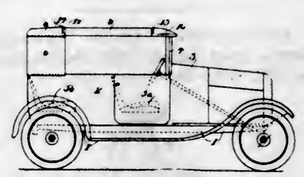
3. In an electric storage battery, grid plates, and a separating bar for the latter, said bar having a crown by which it is adapted to be supported on the respective plate, said plate being provided with means adapted to engage positively said crown to prevent displacement of said bar.

1,347,589. PLOWING-MACHINE. RAFAEL RAMOS and AMBROSE DE CARDENAS, Aguada de Pasajeros, Santa Clara, Cuba. Filed May 19, 1919. Serial No. 298,235. 6 Claims. (Cl. 180—14.)



1. In combination with the frame of a tractor, a trailer pivotally secured to said frame, a driving mechanism including a clutch for the traction wheels of the tractor, and a bar provided with a shoulder connecting the trailer with said clutch to disengage the latter when the trailer strikes an obstruction on the ground.

1,347,590. ELECTRICAL CONNECTOR. MAXWELL W. ROBERTSON, Belle Harbor, N. Y., assignor to Godfrey P. Schmidt. Filed Nov. 19, 1917. Serial No. 202,736. 1 Claim. (Cl. 171—326.)



In combination with the brush of a dynamic electric machine, a flexible connection having a loop at one end, a recess in one side of said brush within which said loop is seated, a screw passing through said loop and said brush, a recess at the opposite side of said brush and an L-shaped contact clip adapted to engage said last mentioned recess and extend over the top of said brush, a binder adapted to fit over said loop within said recess, said screw adapted to engage said binder for drawing said clip, brush, and flexible connection together.

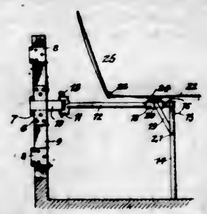
1,347,591. COMPENSATING AXIAL THRUST IN MULTISTAGE TURBINES. KARL RÖDER, Mülheim-Ruhr, Germany. Filed May 13, 1915. Serial No. 27,958. 2 Claims. (Cl. 253—69.)

1. In a multi-stage elastic fluid turbine having a separate blade carrying drum for each stage, a casing, a shaft carrying said drums, and a plurality of balancing heads of different diameters also carried by said shaft, there being as many heads as there are drums, one of said heads being adapted to receive a preponderating steam pressure tending to move the shaft in a direction opposite to that in which the driving fluid tends to move it, the smallest head cooperating with a part of the casing to close off the exhaust passage.

1,347,592. BODY STRUCTURE FOR ROAD-VEHICLES AND THE LIKE. ALLIOTT V. ROE, Bursledon, England. Filed Apr. 2, 1920. Serial No. 370,827. 21 Claims. (Cl. 296—102.)

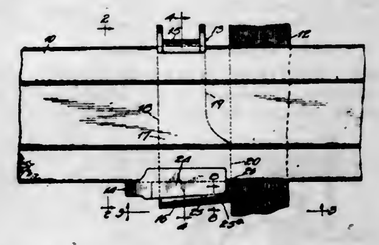
1. A superstructure for road vehicles comprising in combination a canopy superimposed upon the body proper, a rigid auxiliary roof section, a support therefor disposed toward the front of the body proper, a foldable awning permanently connecting said canopy and said auxiliary roof section, and means for supporting the auxiliary roof section as a forward extension to said canopy roof and means supporting the folded awning on said canopy roof when said auxiliary roof section is disposed as a forward extension to said canopy roof.

4. A superstructure for road vehicles, comprising in combination a canopy superimposed upon the body proper, a rigid auxiliary roof section, a support therefor disposed toward the front of the body proper, a foldable awning connecting said canopy and said auxiliary roof section, means for maintaining the awning fully extended and for defining the contour thereof, comprising telescopic former strut members, tensional springs connecting their overlapping ends, and projecting plate members fixed to said canopy roof and to said auxiliary roof structure disposed to support the respective free ends of said strut members, means for supporting the auxiliary roof section as a forward extension to said canopy roof, and means for supporting the folded awning on said canopy roof.



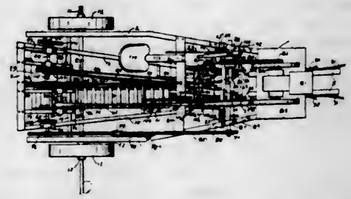
1,347,593. MIRROR DEVICE. HARRY O. RUGH, Chicago, Ill. Filed Aug. 21, 1919. Serial No. 318,865. 7 Claims. (Cl. 45—18.)

1. In a mirror device, the combination with a dished mirror disk having a convex reflecting surface, of a protecting disk cover for the said reflecting surface having an inner concave surface, the degree of concavity of the said cover inner surface being greater than the degree of convexity of the said convex mirror surface.



1,347,594. DETACHABLE AUXILIARY SEAT FOR AUTOMOBILES. BERTHOLD SALINGER, New York, N. Y. Filed Oct. 4, 1919. Serial No. 328,570. 9 Claims. (Cl. 155—10.)

2. An auxiliary seat for automobiles, comprising a hinge operative in line with the ordinary hinges of a door and having one member free of the door and extending beyond the inner face of the door, a bar vertically pivoted at one end to the free member of the hinge, a seat carried by the bar and adapted to be set in horizontal and vertical positions parallel with the bar and a supporting leg pivotally

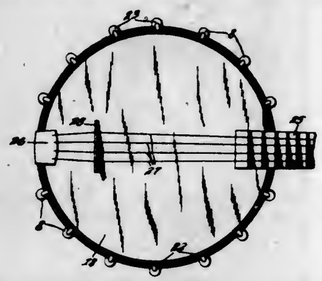


connected to the other end of the bar so as to fold parallel with the seat or be placed at right angles to the bar.

1,347,595. RAIL-ANCHOR. JOHN M. SCOTT, Racine, Wis., assignor to Otto R. Barnett, Chicago, Ill. Filed Nov. 8, 1918. Serial No. 261,694. 19 Claims. (Cl. 238—324.)

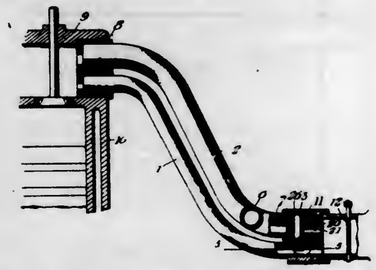
1. A rail anchor comprising a member to extend under the base flange of a rail, and a key adapted to be driven between said member and the rail and provided with a bendable portion on its side adapted to be bent downwardly into locking engagement with the said member to prevent reverse movement of the key.

1,347,596. BEET-HARVESTER. WALTER B. SMITH, Springfield, Ohio. Filed Sept. 17, 1915. Serial No. 51,196. 4 Claims. (Cl. 55—108.)



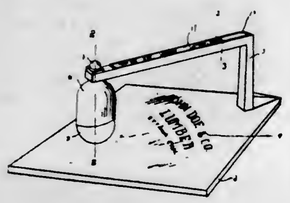
1. In a beet harvester, beet digging mechanism, a topping device, endless chains for gripping the tops of the beets as they are dug from the ground, an endless carrier to receive the body portions of the beets from the digging mechanism, and a device disposed below the gripping chains and slightly in advance of the endless carrier, to properly position the body portions of the beets on the latter, substantially as described.

1,347,597. BANJO. EPAMINONDAS A. STATHOPOULO, New York, N. Y. Filed June 17, 1919. Serial No. 304,812. 1 Claim. (Cl. 84—124.)



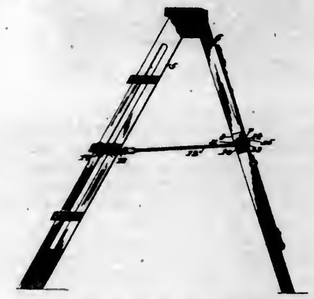
A banjo comprising a main body, a ring imposed upon said body, said ring comprising a relatively deep flange

encircling the main body and having engagement with the peripheral surface of said body, an arcuate portion secured to said flange, a depending flange secured to said arcuate portion, a ring secured to said depending flange, said ring being seated upon the upper face of said body at



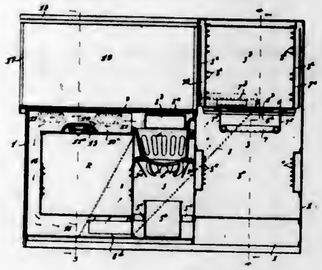
the inner edge thereof, said flange, arcuate portion, and depending flange being so arranged as to form with said body a chamber, a vibratory head stretched over the first mentioned ring and forming with said arcuate portion a chamber, and means for varying the tension of said head.

1,347,598. MULTIPLE-INTAKE MANIFOLD. HARRY PRICE STURM, Clarksburg, W. Va. Filed Apr. 11, 1919. Serial No. 289,229. 5 Claims. (Cl. 123—52.)



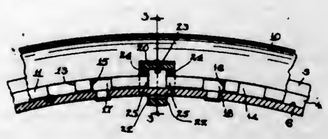
1. A distributer block for a multiple manifold, having passages for receiving low speed sets of conduits and auxiliary sets of conduits, the auxiliary conduit passage including an annular enlargement merging into a valve cage bore, a valve cage fitted in said bore, a spring-seated valve in said cage arranged to open into the annular enlargement by virtue of increased engine speed, a cam shaft journaled on said block, a cam on said shaft operating against the stem of the valve, and an externally applied arm on said shaft, arranged to be operated by associated throttle valve actuating means.

1,347,599. PAPER-WEIGHT. JOHN B. SUMNER, Fort William, Ontario, Canada. Filed Sept. 18, 1919. Serial No. 324,616. 1 Claim. (Cl. 120—82.)



A paperweight consisting of a base, an arm mounted on said base having an outwardly extending portion, an inverted cup-shaped member carried on the under side of said outwardly extending portion, a ball loosely held by said cup-shaped member on said base and said ball being adapted to be pushed into said cup-shaped member when paper is placed between said ball and said base.

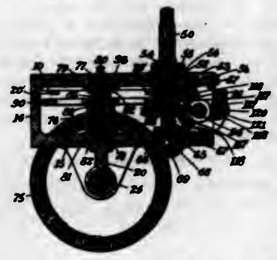
1,347,600. STEPLADDER. AUGUST SWANSON, Cedar Rapids, Iowa. Filed Mar. 8, 1920. Serial No. 364,280. 5 Claims. (Cl. 228—33.)



1. In combination with a step-ladder having folding legs, a bridge-bar pivoted to said legs, a brace-rod pivotally connecting with one of the steps, and slidably connecting with the bridge-bar, means to limit the outward movement of the bridge-bar on the rod, and a lock to engage its end when in holding position.

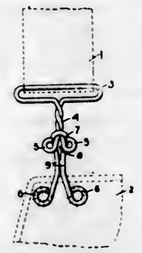
1,347,601. COMBINATION COAL AND GAS RANGE. THOMAS E. TAYLOR, Mansfield, Ohio, assignor to The Eclipse Stove Company, Mansfield, Ohio, a Corporation of Ohio. Filed May 2, 1919. Serial No. 294,158. 22 Claims. (Cl. 126—36.)

1. In a cooking range, a casing having coal and gas ovens on opposite sides of and heated by a fire box and provided with a chimney flue said casing having separate indirect coal and gas flues surrounding said coal and gas ovens, respectively.



1,347,602. VEHICLE-WHEEL RIM. JOSEPH C. THEBERATH, Cleveland, Ohio, assignor to The Standard Parts Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 9, 1917. Serial No. 201,163. 8 Claims. (Cl. 152—21.)

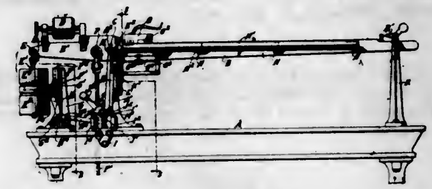
1. The combination with a wheel rim; of a side-flange removably mounted on said rim; and a locking member



adapted to secure said flange to said rim, said member being rotatable about an axis substantially tangential to the latter into and out of engagement with said flange and said member being formed to contact with the tire shoe when the latter is in place and to be thereby held against rotation.

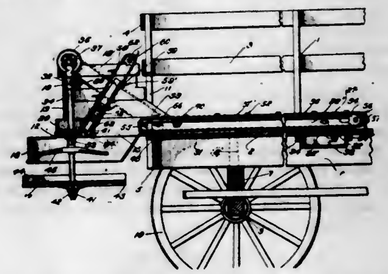
1,347,603. SPRING-MOTOR. MELVILLE E. A. TUCKER, New York, N. Y. Filed Sept. 19, 1916. Serial No. 120,964. 21 Claims. (Cl. 185—37.)

16. In a motor, the combination with a frame of a rotary actuating member carried thereby, a bearing detachably secured to said frame and extending through a wall thereof, a spindle rotatably mounted in said bearing, a gear secured to said spindle and arranged to be rotated as a result of the rotation of said actuating member, a rotatable governor carried by said frame, and a gear carried by said spindle and arranged to rotate said governor, said spindle being arranged to be freely removed laterally from said frame after said bearing has been detached from said frame and separated therefrom.



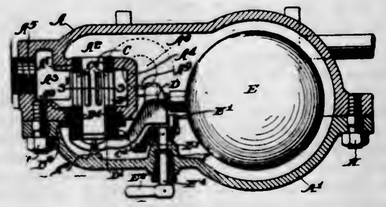
1,347,604. SEPARABLE FASTENER. ANDREW O. VESTINE, Watertown, Mass., assignor to L. C. Chase & Company, Boston, Mass., a Firm. Filed May 15, 1919. Serial No. 297,325. 2 Claims. (Cl. 24—228.)

1. A separable fastener composed of two members, one member being made from a length of wire bent centrally to form an elongated loop, the meeting portions of the wire being twisted together and presenting a neck portion which extends at right angles from one side of the loop, and the ends of the wire being bent into oppositely-disposed eyes which form a cross-head, and the other member being formed of resilient wire which is bent centrally to form a loop portion that has two resilient sides in close proximity and an eye portion at the bend of the loop which is larger than the neck portion of the first-named member, the resiliency of the sides of the loop permitting the cross-head of the first-named member to be inserted through the eye.



1,347,605. WEIGHING-SCALE. AXEL S. VOGT, Philadelphia, Pa. Filed Jan. 22, 1920. Serial No. 353,292. 4 Claims. (Cl. 265—32.)

1. In a beam scale having a sliding poise with an index finger and a counter poise weight by shifting which the weighing capacity of the scale can be increased, a shiftable index scale support having two index scales, one adapted to register with the index finger on the sliding poise in one position of the support and the other to so



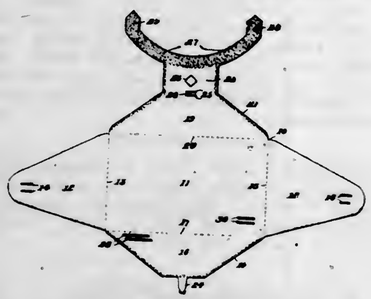
register in another position of the support, in combination with a counter poise weight lifting and lowering device, means for actuating said device and means for shifting the index scale support actuated by the mechanism which lifts and lowers the counter poise weight.

1,347,606. STRAW-SPREADING MECHANISM. HALBERT C. WALLACE, Kansas City, Mo. Filed Oct. 19, 1918. Serial No. 258,801. 20 Claims. (Cl. 275—5.)

6. The combination with a vehicle body of a spreading device comprising a frame mounted within said body and extending therefrom a hopper supported by said frame at the rear end of said body and having an opening for receiving material therefrom and having a discharge opening at the base thereof, a conveyer mounted in said frame within the vehicle body, a revoluble spreading element suspended beneath the hopper discharge opening, and a feeding belt operating within the said hopper for forcing a feed of material through the hopper openings and onto the delivery element.

1,347,607. STEAM-TRAP. AXEL B. WALLEM, Cynwyd, Pa., assignor, by mesne assignments, to H. S. B. W.-Cochrane Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 27, 1919. Serial No. 300,041. 3 Claims. (Cl. 137—103.)

2. A steam trap comprising inlet and outlet chambers having a casing made up of two separable cast sections, and having its outlet chamber formed in one of said sections by a wall projecting into the inlet chamber portion thereof, and comprising two oppositely lying wall portions through which alined openings are formed, in

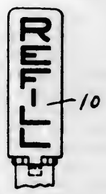


combination with a tubular valve seat member having its ends received in said opening, and formed with ports between its ends, a tubular valve mounted in said valve seat member and held in place by abutment against the separable cast section of the casing and a float in the inlet chamber connected to said valve.

1,347,608. COFFEE-GRINDING MACHINE. FREDERICK A. WILCOX and EDWARD L. MCGRORY, Spokane, Wash. Filed Aug. 5, 1919. Serial No. 315,382. 3 Claims. (Cl. 130—17.)

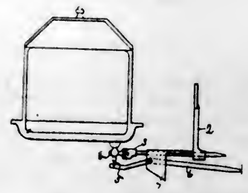
1. The combination with a mill as described, including its outlet pipe and a joint member secured thereto forming a separating casing, of a conveyer pipe connected to the joint member with its upper open end in alinement with and directly beneath the outlet pipe, a suction pipe secured to the joint member and having a lateral connection with the casing, and said casing having an air inlet port opposite the lateral connection.

1,347,609. ENVELOP. JOSEPH WISKI, Milwaukee, Wis., assignor of one-half to Joseph Olesiak, Milwaukee, Wis. Filed Jan. 9, 1919. Serial No. 270,311. 1 Claim. (Cl. 229—82.)



An envelop comprising a rectangular body portion having slits in one corner thereof, an end flap formed on the opposite side edges of said body and each provided with a pair of spaced slits, securing means arranged in said slits when the flaps are folded over in overlapping relation, a rear top triangular-shaped flap formed on one edge of said body and provided at its apex with a locking tongue, said flap also having slits in one corner thereof, a triangular-shaped rear bottom flap formed on said body at an edge remote from said rear top flap, a reduced neck portion formed from the apex of said rear bottom flap, said neck portion having spaced slits therein at the point of juncture of said neck with said flap, and oppositely extending curved arms formed on the free end of said neck and having adhesive on one side thereof, said arms adapted when in folded position to be extended through the slits in the body and rear top flap said locking tongue extended through the slits of said neck when said rear top and bottom flaps are folded against said body, for holding said flaps against separation.

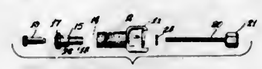
1,347,610. SEPARATION OF MAGNESIUM FROM COMPOUNDS AND MIXTURES OF MAGNESIUM AND CALCIUM CARBONATES. HENRY WILLIAM COUPE ANNABLE, Egham, England. Filed June 29, 1918. Serial No. 242,675. 5 Claims. (Cl. 23—13.)



1. A process for the separation of magnesium from compounds and mixtures of magnesium and calcium carbonates which comprises calcining the associated carbonates, then treating them with carbon dioxid, then heating them suspended in water under pressure with the chlorid of an alkaline earth metal in quantity equivalent to the magnesium present.

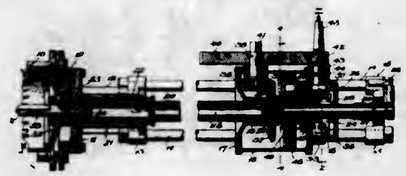
1,347,611. SUPPORT FOR FIRE-EXTINGUISHERS. WALTER J. BLENKO, Lancaster, Ohio. Filed Aug. 2, 1919. Serial No. 315,008. 7 Claims. (Cl. 248—20.)

4. In an apparatus of the character described, the combination of a support or bracket for supporting the fire extinguisher, a wall-plate, a vertically movable hinge member secured to said plate, and to said bracket, a linkage connecting the upper end of said bracket with said wall-plate, said linkage having a vertically movable connection with said plate, a latch engaging said bracket to hold the same in vertical position, and a spring connected to said hinge member, a support for the other end of said spring, whereby when the weight of said extinguisher is decreased said spring operates to release said bracket from said latch.



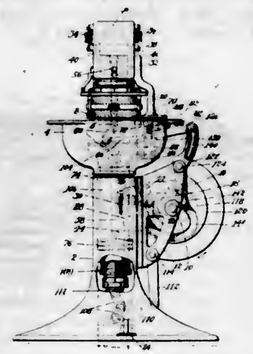
1,347,612. VALVE CONTROL FOR RADIATOR DRAIN-COCKS. HERMAN BRANDT, Fort Worth, Tex. Filed Mar. 6, 1919. Serial No. 280,967. 3 Claims. (Cl. 137—139.)

1. A valve controlling and cleaning device comprising a rocker-shaft provided with a handle and a clutch for engaging a valve handle, a combined hanger and bracket for mounting said shaft on an automobile, a lever fulcrumed in said bracket, and a rod loosely connected to said lever and adapted to enter a radiator drain pipe.



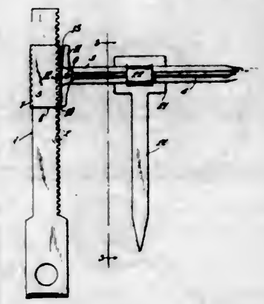
1,347,613. VIOLIN-PEG. PETER D. BROWN, Kingston, Canada. Filed Nov. 25, 1919. Serial No. 340,472. 2 Claims. (Cl. 84—78.)

2. A violin peg having a body portion, a winged end formed on said body portion, a tightening member partially telescoping into the small end of said body portion, a head on said tightening member, said tightening member having an internally threaded portion, a central longitudinal opening through said winged end and said body portion, a washer on the outer face of said winged



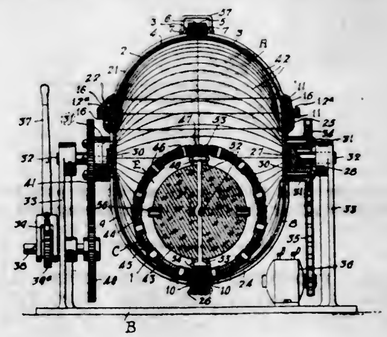
end, a pin having a nut at its outer end, said pin extending through said opening and threadedly engaged internally of said tightening member, said body portion having a V-shaped groove formed upon its periphery to receive a violin string.

1,347,614. DRILLING-MACHINE. WILLIAM R. BROWN, Decatur, Ill., assignor to Adolph Mueller, trustee, Decatur, Ill. Filed Apr. 1, 1919. Serial No. 286,762. 28 Claims. (Cl. 77—38.)



1. In a machine of the class described, the combination of a supporting frame, a cutter shaft rotatably mounted in said frame, gear mechanism for rotating said shaft, a manually operable shaft for actuating said gear mechanism, a power shaft removably mounted on said frame, and a disconnectible connection between said manually operable shaft and said removably mounted power shaft.

1,347,615. CUTTING-MACHINE. IRA C. BUCKMINSTER, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 17, 1916. Serial No. 98,199. 89 Claims. (Cl. 164—21.)

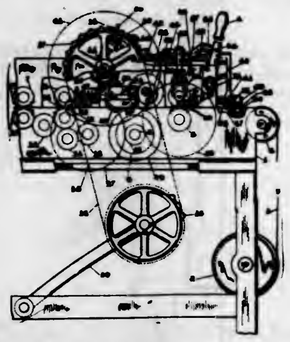


1. . machine of the class described having, in combination, a cutting block, a die, means for effecting successive relative movements of said block and die to cause the die first to cut partly through the stock and then to complete the cut, and means for moving the die to feed the stock in the interval between said two relative cutting movements of the die and the block.

1,347,616. GRIPPER FOR PRINTING-PRESSES. FRANK CARPER, Cleveland, Ohio, assignor of one-sixth to Patrick S. Grady, Cleveland, Ohio. Filed Jan. 8, 1920. Serial No. 350,075. 1 Claim. (Cl. 101—408.)

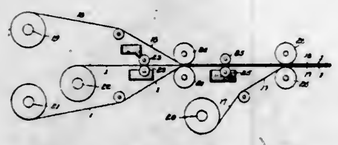
A gripper notched along one edge and provided with a finger having a frame slidable along the gripper, said frame having front and back walls between which the gripper is inclosed, the front wall having an ear projecting inwardly beyond the edge of the gripper, a pivot pin connecting said ear and the finger, and a spring catch pivoted on said pin, between the ear and the finger and adapted to engage any one of the notches.

1,347,617. WASHING-MACHINE. REED J. CLARK, Jr., Youngstown, Ohio. Filed Sept. 29, 1919. Serial No. 327,274. 2 Claims. (Cl. 68—18.)



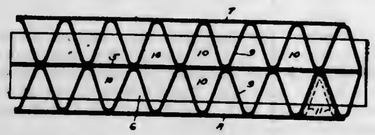
1. A washing machine including a hollow water-tight casing, a plurality of metal straps extending around said casing in a plurality of planes and connected together to form a frame, trunnions fixed to said straps at an axis of the frame, and bearings for supporting said trunnions to adapt the frame to rotate.

1,347,618. MACHINE FOR CUTTING MOVING MATERIAL INTO LENGTHS. KENNETH M. CLIPSHAM and MAUNSELL B. JACKSON, Jr., Toronto, Ontario, Canada, assignors to Ernest F. Arnold and Frederick F. Arnold, trading as Arnold Machine Co., Toronto, Ontario, Canada. Filed July 31, 1919. Serial No. 314,475. 10 Claims. (Cl. 164—49.)



1. In apparatus for cutting material into lengths in which the stock is in continuous motion and the cutting means, when cutting travels with and at the same rate of speed as the material to be cut, a block, carrying a stationary shear blade and a movable shear blade, movable parallel to the plane of movement of the material to be

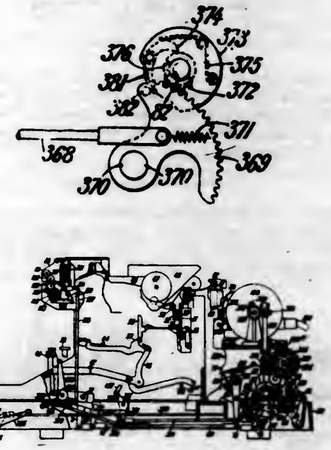
cut; means for feeding the stock; means for moving the block in the same direction as the stock and at the same speed for a sufficient length of time for a cut to be made and thereafter returning it to the initial position; a cam movable to and from a position to operate the movable



shear blade as the blade is moved under the cam, and means for holding the cam stationary during the operation of the blade, the blade being adapted for operation by said cam and provided with spring means tending to return it to its normal raised position.

1,347,619. PAPER OR PAPER-BOARD AND METHOD OF MAKING THE SAME. FRANK B. DAVIDSON, Marseilles, Ill., assignor to National Biscuit Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 21, 1919. Serial No. 291,655. 9 Claims. (Cl. 154—50.)

1. A paper sheet having a ply made from pulp having substantially all of the fibers thereof impregnated with wax.



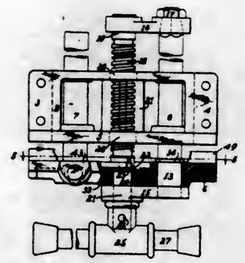
1,347,620. PHOTOGRAPHER'S DEVELOPING RACK. BENJAMIN R. DAY, Winfield, Kans. Filed Feb. 20, 1920. Serial No. 360,221. 3 Claims. (Cl. 95—100.)

1. A device of the character described comprising a central upstanding web and a supporting base in combination with a corrugated web extending up one side and down the other side of the central web.

1,347,621. COMBINED TYPEWRITING AND COMPUTING MACHINE. GUSTAVE O. DEGENER, Brooklyn, N. Y., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Nov. 12, 1917. Serial No. 201,626. 100 Claims. (Cl. 235—59.)

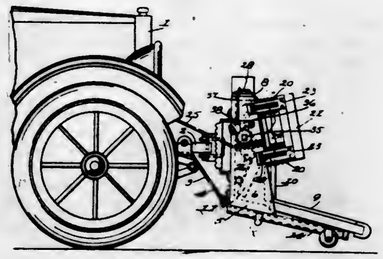
1. In a combined typewriting and computing machine, the combination with numeral keys and computing wheels, of a variably movable element, driving means, interponents on said element, one for each numeral key, each interponent being movable to an effective position by its numeral key, and a universal bar operated by said numeral keys to release said driving means so that the latter can move said variably movable element by the effective interponent.

6. In a combined typewriting and computing machine, the combination with numeral keys and dial wheels, of a variably movable shaft, valuating cams, one for each numeral key, said valuating cams being effective to oscillate said shaft through different angular distances, a drive-shaft common to said cams, and a motor-drive for said drive-shaft under the control of said numeral keys.



93. The combination with a traveling element, of mechanism for producing skipping movements of said element, a power-drive, and means for simultaneously rendering said skip-producing mechanism and said power-drive ineffective.

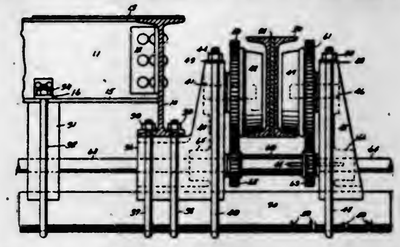
1,347,622. VACCINE-INJECTOR. ARTHUR E. DEININGER, St. Paul, Nebr. Filed Mar. 29, 1919. Serial No. 286,029. 6 Claims. (Cl. 128—217.)



4. A hypodermic syringe comprising a magazine, a needle positioned below the magazine, a sliding plate arranged intermediate the magazine and needle, said plate having an opening formed therein arranged to alternately register with the magazine and needle, means for sliding the plate in the casing, spring means engaging said plate to hold the same in its raised and lowered positions against displacement, a slidable plunger, and means for actuating the plunger.

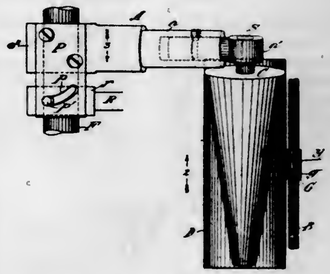
1,347,623. VISE. CHARLES SUMNER EVANS, Berkeley, Calif. Filed Feb. 16, 1916. Serial No. 78,659. 46 Claims. (Cl. 81—36.)

14. In a vise, a main frame, a nut in said frame, a movable frame arranged in said main frame, a pivoted slide forming part of said movable frame, links attached to said pivoted slide, a screw supported in said links and adapted to be moved transversely into and out of said nut, and means including one of said links for locking said screw in said nut.



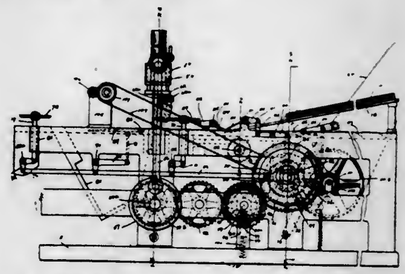
1,347,624. AUTOMOBILE-FENDER. PETER FEDOROW, Chicago, Ill. Filed May 7, 1920. Serial No. 379,471. 2 Claims. (Cl. 293—25.)

1. In a device of the character described, in combination, a support adapted to be mounted on the chassis of an automobile, a collapsible platform mounted on said support, means comprising a spring mounted on said support continually urging said platform to assume extended position, means whereby said platform may be held in collapsed position against the action of said spring, a plurality of other springs mounted on said support, a bumper-member yieldably mounted on said support and engaging said last-mentioned springs, said platform and bumper-member being adapted to coöperate to yieldingly receive and carry a person or other movable object encountered by said device.



1,347,625. RUNNING-GEAR FOR TRAVELING CRANES. BENJAMIN F. FITCH, Evanston, Ill., assignor to Motor Terminals Company, Wilmington, Del., a Corporation of Delaware. Filed May 26, 1919. Serial No. 299,766. 20 Claims. (Cl. 105—163.)

1. The combination with the structural frame of a traveling crane or similar structure, of a bar secured thereto by tension members and projecting laterally therefrom, a pair of castings riding on the bar, supporting wheels

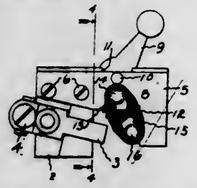


carried by the castings, and tension members securing the bar-castings to the projecting portions of the bar.

1,347,626. WINDING-MACHINE. GEORGE W. FOSTER, Providence, R. I., assignor to Universal Winding Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 7, 1916. Serial No. 124,373. 10 Claims. (Cl. 242—43.)

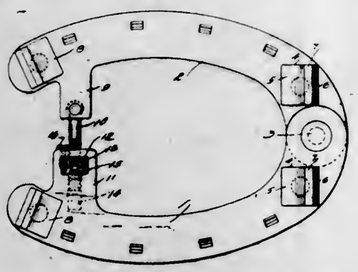
1. In a winding machine, the combination with a rotatable cone-holder on which the cone is wound with a gradually increasing taper on its surface, of means for traversing the yarn longitudinally of the holder, and means for continuously displacing the holder in the direction of its apex throughout the winding to regulate the disposition of the layers of yarn in their overlapped relation to prevent the nose of the cone from becoming abnormally concaved.

1,347,627. PRINTING-PRESS. CLAUDE L. FRIEL, Chicago, Ill. Filed Sept. 22, 1919. Serial No. 325,478. 6 Claims. (Cl. 101—78.)



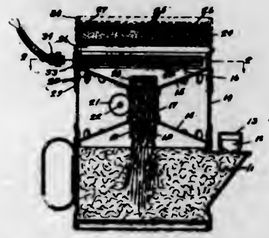
1. A printing press comprising a frame, a carriage mounted in said frame, means on said carriage to grip and carry a sheet of paper; means to intermittently move said carriage; in combination with printing means adapted to print upon the paper carried by said carriage when said carriage stops in its travel toward the tail.

1,347,628. WINDSHIELD-CLEANER. FRANK S. GOLD, Toronto, Ontario, Canada. Filed Apr. 7, 1920. Serial No. 372,010. 5 Claims. (Cl. 15—59.)



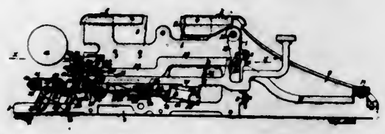
1. A windshield cleaner comprising a spring roller provided with a mopping surface; and flexible belts, each connected at one end to the roller and adapted to be wound thereon and having its other end connected with a stationary part at one side of the surface to be cleaned; and means for drawing the roller over the surface to be cleaned.

1,347,629. ELECTRIC SWITCH. MONROE GUETT, Hartford, Conn., assignor to The Hart & Hegeman Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed July 15, 1919. Serial No. 310,932. 5 Claims. (Cl. 200—67.)



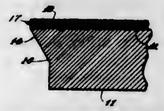
1. An electric switch comprising a swinging arm of insulating material, a contact bridging part of conducting material, supported at the free portion of the insulating arm, an actuator mounted for back and forth movement and provided with a pin, a spring, and an insulating arm supporting the spring, the spring being interposed between the pin and the bridging member, and the pin acting on each motion of the actuator, to condition the spring to snap the switching member, after said pin has crossed the dead center line which intersects the axis of motion of the switching member and the center of the contact-bridging part.

1,347,630. HORSESHOE. ANTON HADEN, Clay Center, Kans. Filed Feb. 15, 1917. Serial No. 148,838. 1 Claim. (Cl. 168—19.)



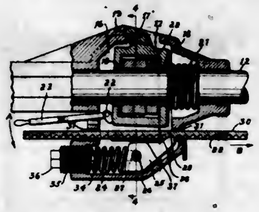
A sectional horseshoe, the sections of which are formed at their rear ends with oppositely disposed sockets, a screw-threaded rod pivotally carried by one of said sockets for projection into the second socket, said second socket being formed with an elongated aperture, a peripherally grooved adjusting disk operatively arranged upon said rod within the apertured portion of said second socket, and a screw releasably carried by said second socket for locking engagement with any one of the grooved portions of said disk.

1,347,631. CATALYTIC HEATING APPARATUS. JEAN HERCK, New York, N. Y., assignor, by direct and mesne assignments, to La Societe Lyonnaise Des Rechauds Catalytiques, Camell, Cochet, Gritte & Cie., Lyon, France. Filed Apr. 25, 1917. Serial No. 164,392. 3 Claims. (Cl. 158—96.)



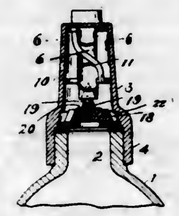
1. A portable catalytic heating apparatus comprising a closed container adapted to receive a supply of volatile combustible fluid, a porous body of catalytic material arranged in the top of said container above the fluid therein and forming a closure therefor, an electric heating element arranged in said container adjacent said catalytic body to heat it, and also the vapor of the volatile fluid therein, said heating element having its terminals extended through the side wall of said container and arranged for detachable connection to a source of electric energy.

1,347,632. TYPEWRITING-MACHINE. JOSEPH B. HOLDEN, Syracuse, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Oct. 8, 1919. Serial No. 329,285. 6 Claims. (Cl. 197—97.)



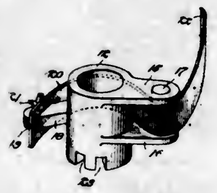
1. In a typewriting machine, a universal-bar frame comprising a front cross bar, a pair of side bars extending backward from its ends, and a rear cross bar connecting the side bars together, the whole frame being composed of a single piece of sheet metal bent where the cross bars intersect the side bars, and the lateral faces of the side bars being in planes that are perpendicular to the length of each cross bar.

1,347,633. SPOT-GROUND. AARON C. HORN, New York, N. Y. Filed Mar. 14, 1917. Serial No. 154,711. 6 Claims. (Cl. 72—105.)



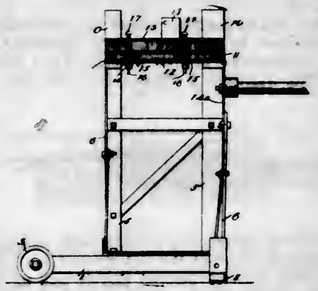
1. A spot ground for concrete or similar floor, wall, or partition construction comprising a fiber block, said fiber block formed with a face for nailing wooden building parts thereto, and having an enlarged base and a nonmetallic waterproofing strip attached thereto, said strip having an exposed rough pebbled surface.

1,347,634. AUTOMATIC SLACK-ADJUSTER. WALTER W. HUNZICKER, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Aug. 18, 1919. Serial No. 318,127. 17 Claims. (Cl. 188—199.)



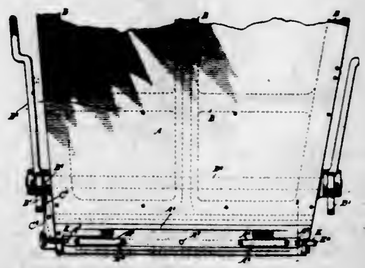
1. A slack adjuster comprising, in combination, a two-part telescopic push rod, one of said parts containing a housing, and a holding device movably arranged within the housing and adapted to engage one of the parts to prevent relative movement of said parts in one direction, said holding device comprising a holder and a plurality of dogs arranged within the holder.

1,347,635. LIQUID-DISPENSING DEVICE. JACOB W. KAISER, East Cleveland, Ohio. Filed No. 22, 1916. Serial No. 132,745. 9 Claims. (Cl. 215—69.)



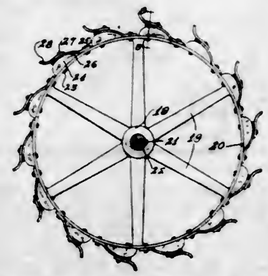
1. A liquid dispensing device comprising a receptacle having an outlet portion; a baffle device within the outlet portion; a check valve between the baffle device and the receptacle, said valve having a body portion and an extending head, the body of the valve having a slanting surface at the outer portion thereof, the extending head also having a slanting surface; guiding means coöperating with the slanting surfaces upon the valve head and body portion whereby when the outlet portion of the device is moved above the receptacle the valve moves to its seat.

1,347,636. TIMER. WALTER C. KARNES, Joplin, Mo. Filed Oct. 7, 1919. Serial No. 329,057. 3 Claims. (Cl. 200—26.)



2. A brush structure for timers comprising a body portion adapted to be non-rotatably secured to a timer shaft, spaced lateral arms on the body portion, an abutment pin connecting the arms, and a brush element secured to the body portion and extending between the arms and around the abutment to form a contact engaging terminal.

1,347,637. STAND. EMMOR HAMILTON KELLEY and GEORGE ALVA STEWART, Jr., South Brownsville, Pa. Filed Oct. 25, 1919. Serial No. 333,192. 6 Claims. (Cl. 29—89.)



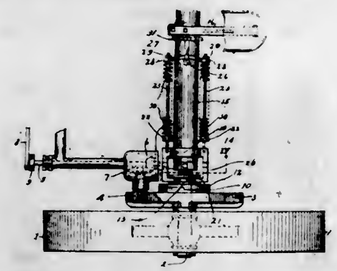
6. A support of the character specified having upstanding webs spaced apart from each other, posts mounted in the webs and adjustable longitudinally thereof and spaced apart from each other to engage within the engine pan bolt holes, one of the webs having a bracket plate provided with an opening adapted to register with one of the water intake bolt holes when the posts are in engagement with the engine pan bolt holes.

1,347,638. TYPOGRAPHICAL MACHINE. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Apr. 15, 1919. Serial No. 290,128. 25 Claims. (Cl. 199—44.)

12. A linotype magazine provided with a matrix locking bar shiftable longitudinally thereon and means for projecting said bar into the magazine as it is shifted longitudinally.

1,347,639. CARCASS-SCRAPING WHEEL. JOHN W. KOHLHEPP, Chicago, Ill., assignor to Allbright-Nell Co., a Corporation of Illinois. Filed June 6, 1918. Serial No. 238,476. 2 Claims. (Cl. 17—11.)

1. A carcass cleaning and dehairing device comprising a rigid wheel, solid rubber pads rigidly secured on the

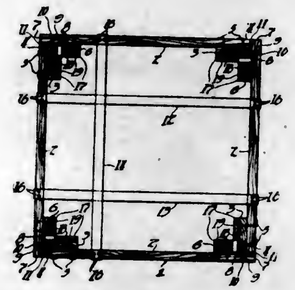


wheel, arms bent to conform to the shape of said pads and resting on said pads, and scraper blades rigidly secured to said arms to project beyond the free ends thereof.

1,347,640. DRAFT-ARM. JOHN A. LAMONT, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed May 6, 1918. Serial No. 232,759. 1 Claim. (Cl. 105—420.)

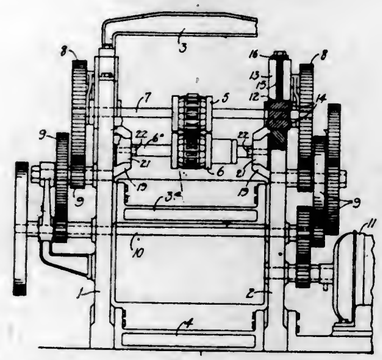
A draft arm comprising a main body portion provided with shoulders adjacent the end sill and the body bolster, an associated member secured thereto and having an offset portion over the body bolster, a reinforcing member operatively connected to said associated member and mounted over the body bolster, and a member secured to said associated member forming with the end of said body portion shoulders between which the body bolster is received, said associated member having one end thereof engaging a shoulder on the body portion adjacent the end sill.

1,347,641. SEAT AUTOMATIC GEAR CONTROL. ALLEN H. LEWIS, Wichita, Kans. Filed Oct. 27, 1919. Serial No. 333,649. 1 Claim. (Cl. 180—82.)



In an agricultural implement, a clutch, a vertically movable seat, means operatively connecting said clutch with said seat, and a spring for simultaneously opening said clutch and lifting said seat; one element of said operative connecting means being constructed to be shiftable in such manner as to permit of the opening of said clutch when said seat is in depressed position.

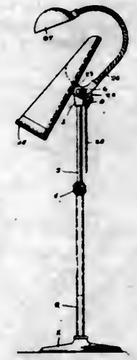
1,347,642. COMFORT AND THE LIKE. LUCIE R. MCNATT, Arlington, Tex. Filed Jan. 23, 1920. Serial No. 353,563. 1 Claim. (Cl. 5—3.)



A comfort constructed of two covers and a filling material inclosed between the covers, and quick detachable clasps consisting of a socket member attached to the inside of one cover and a lug member attached to the inside of the other cover with the lug thereof penetrating and passing through the filling material into the socket of the socket member.

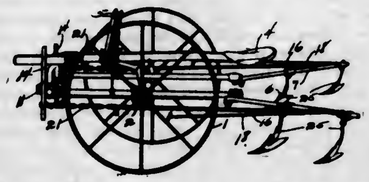
1,347,643. PACKING-FRAME. GEORGE T. MALLETTE, Irvington, N. J., assignor to New Jersey Patent Company, West Orange, N. J., a Corporation of New Jersey. Filed Sept. 22, 1917. Serial No. 192,652. 10 Claims. (Cl. 217—52.)

1. In a packing frame, a plurality of side-pieces, fastening devices directly and adjustably connecting the adjacent pieces together thereby forming a frame the adjacent pieces of which are adjustable in directions at an angle to each other and pads applied to said pieces and adapted to be moved into engagement with an article to be packed upon adjustment of the frame, substantially as described.



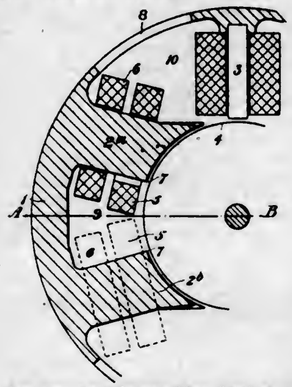
1,347,644. ROTARY PUNCH-PRESS AND THE LIKE. AXEL C. V. MALM, Philadelphia, Pa., assignor to The Malm Machine Company, Dayton, Ohio, a Corporation of Ohio. Original application filed May 25, 1916, Serial No. 99,915. Patent No. 1,286,377. Divided and this application filed Oct. 7, 1918. Serial No. 257,127. 9 Claims. (Cl. 64—52.)

6. In a machine of the character described, a frame comprising side members having dove-tailed guideways, a rotary member arranged between said frame members and comprising a shaft, bearing blocks to receive the ends of said shaft, said bearing blocks being dove-tailed to fit within the respective guideways, dove-tailed stop blocks adapted to enter the respective guideways and each having a set screw adapted to engage the base of said guideway and force the dove-tailed portion of the stop block into locking engagement with the dove-tailed portion of the guideway.



1,347,645. POSTING-STAND. FRED L. MANNY, Benton Harbor, Mich., assignor to Baker-Vawter Company, Benton Harbor, Mich., a Corporation of Michigan. Filed Dec. 17, 1917. Serial No. 207,393. 5 Claims. (Cl. 45—60.)

5. A posting stand comprising a standard, a block fixed to the top of said standard, said block being formed with a horizontal split clamping bore and equipped with a clamping bolt, a supporting rod seated in said bore and formed with a longitudinal groove, a center rack plate provided with an orificed bracket engaging said rod, and op-

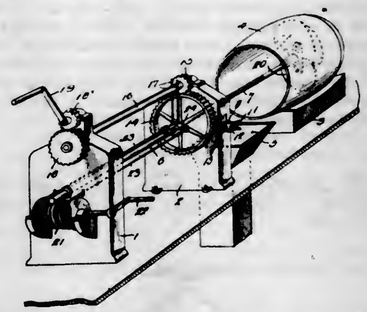


posite side rack plates provided with orificed brackets engaging said rod, said brackets being equipped with set screws arranged to engage said longitudinal groove in the supporting rod.

1,347,646. COTTON-CHOPPER ATTACHMENT FOR CULTIVATORS. WILLIAM A. MARTIN and MATHEW P. ROEBUCK, Waxahachie, Tex., assignors of one-third to Geo. E. White, Fort Worth, Tex. Filed Oct. 31, 1919. Serial No. 334,707. 6 Claims. (Cl. 97—48.)

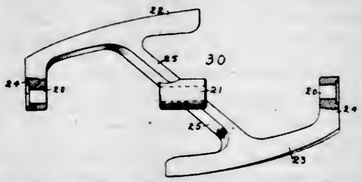
1. Attachments for cultivators comprising supplemental beams pivotally connected at their front ends to the cultivator beams, a cross draft beam mounted on the forward part of the cultivator, adjustable connections connecting said cross beam and the rear ends of said supplemental beams, and plows mounted on said supplemental beams.

1,347,647. DYNAMO-ELECTRIC MACHINERY. JOHN HERBERT ST. HILL MAWDSLEY, Dursley, and HENRY FRANCIS JOEL, Sr., Forest Gate, England. Filed Mar. 12, 1917. Serial No. 154,345. 3 Claims. (Cl. 172—36.)



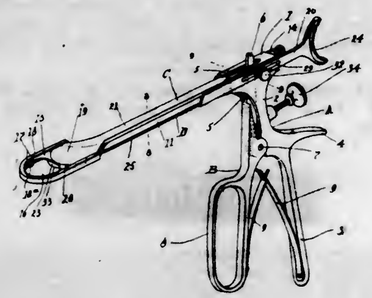
1. A dynamo electric machine having non-radial pole cores in pairs and interpoles between said pairs of pole cores, said pole cores having a substantially constant diameter the length of said pole cores, in combination with a plurality of field coils upon a pole of said pole cores, one of said coils being a series coil of larger diameter than the pole core and spaced to provide a ventilating duct from a peripheral pole end along the surface of the said pole to the outside surface of the remaining field core winding.

1,347,648. BRUSH. JOHN MORRISON, Jr., Glens Falls, N. Y. Filed Feb. 4, 1920. Serial No. 356,194. 4 Claims. (Cl. 15—30.)



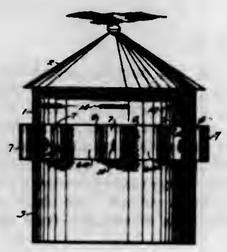
1. In a brush the combination of a shell, a wooden core housed within said shell, metallic fastening members secured to said shell and also secured to the inner surface of said core, a cement filling housed within said shell and engaging said core, and bristle tufts supported by said cement filling.

1,347,649. MACHINE FOR EMPTYING BARRELS. CLIFFORD C. MOSHER, Lima, Ohio. Filed Sept. 22, 1919. Serial No. 325,457. 2 Claims. (Cl. 83—6.)



1. A device for the purpose described, comprising the combination of a cradle to support a container in horizontal position, a screw-threaded shaft journaled to move longitudinally in the axis of the container, means to rotate said shaft, a half-nut arranged to be engaged with or disengaged from the screw-thread on said shaft, a cutter head, having scoop-shaped blades on the end of said shaft, and means to retract said shaft and head bodily when said half-nut is disengaged from the shaft.

1,347,650. RUBBER-CEMENT-MIXING MACHINE. CLIFFORD C. MOSHER, Lima, Ohio. Filed Dec. 2, 1919. Serial No. 341,994. 1 Claim. (Cl. 259—134.)

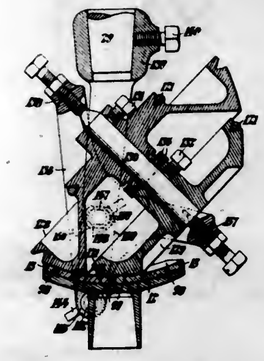


In a machine of the class described, an agitator comprising, in combination with a shaft adapted to run axially through the machine, three hub members adapted to be secured on said shaft, and two blade members, each connected to one of the end hub members by a radial arm and to the center hub member by an oblique arm, the ends of the blade members extending beyond the connection with said oblique arms and overlapping each other in their paths of travel.

1,347,651. TONSILLOTOME. WALTER W. NAUTH, Winona, Minn. Filed Mar. 29, 1919. Serial No. 286,209. 3 Claims. (Cl. 128—309.)

3. In a tonsillotome, in combination, a comparatively long horizotally disposed frame comprising in part a rigid horizontally disposed loop at its outer extremity, and a downwardly extending handle at the opposite end thereof, said loop being adapted to be slipped over the body to be severed, a slidable cutting blade, a slidable crushing blade, both of said blades being slidably supported on the frame adjacent to and slidable over the opening of said loop, and means for operating said crushing blade, said cutting blade overlying the outside of said frame and extending beyond the handle end thereof and being mounted in a manner so as to be individually removable therefrom as and for the purpose set forth.

1,347,652. GUARD-CAGE. SWAN OLSON, Rockford, Ill. Filed Apr. 16, 1920. Serial No. 374,410. 2 Claims. (Cl. 89—36.)

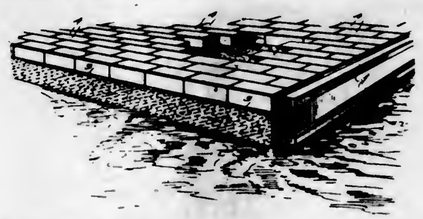


1. In a guard cage, upper and lower sections, spaced insert plates connecting said sections, turrets pivotally inserted between said insert plates and formed with sight-openings, and slide plates arranged in said turrets and adapted for movement over said sight-openings.

1,347,653. MECHANISM FOR MAKING BIFOCAL LENSES. ARTHUR E. PAIGE, Philadelphia, Pa. Original application filed Mar. 4, 1915, Serial No. 12,028. Divided and this application filed June 5, 1915, Serial No. 32,259. Renewed Dec. 12, 1919. Serial No. 344,465. 16 Claims. (Cl. 51—131.)

1. A rotary lap having a perimetral abrading surface extending transversely to its axis of rotation and arcually curved respectively differently concentrically to said axis and transversely thereto; one edge of said surface being nearer the lap axis than the opposite edge.

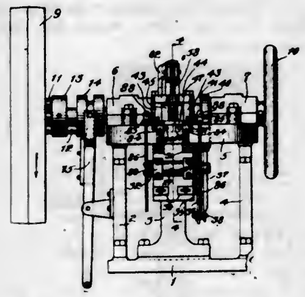
4. In surfacing mechanism, the combination with a rotary lap having a transversely curved abrading surface and an axial spindle extending obliquely to said surface in rigid relation therewith, and a conical bearing surface at the end of said spindle; of a support movable toward and away from the material to be surfaced; and means detachably connecting said lap with said support, including a member having an axially adjustable conical bearing surface arranged to detachably engage the end of said spindle.



5. A rotary lap having a rigid spindle, an annular abrading surface which is a spherical zone, in concentric relation with said spindle, and an annular abrading surface, in concentric relation with said spindle, curved respectively differently transversely and circumferentially; the chords of the transverse arcs of each of said surfaces being inclined with respect to the axis of said spindle.

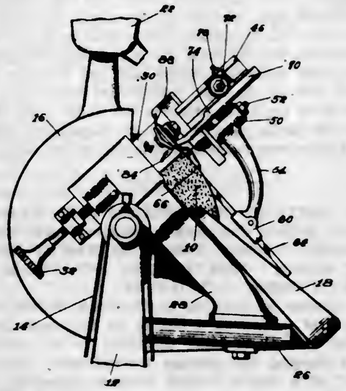
6. A rotary surfacing tool having, in concentric relation to a common axis, two distinct and differently curved annular abrading zones, in variable axially spaced relation; one being curved respectively differently transversely and circumferentially; the greatest radial extent of each of said zones, from said axis, being less than the radius of curvature of its abrading surface; all chords of transverse curves of said zones converging toward said axis, in the same general direction.

12. In bifocal lens surfacing mechanism, the combination with a rotary holder for the glass which is to be abraded; of two rotary laps, each having an annular abrading surface arcually curved differently circumferentially and radially; means arranged to present said laps with said abrading surfaces in respective operative relation to the respective lens areas, with only a transverse line of contact between each lap and the lens area which it is to abrade, and with their smaller circumferential edges at the junction line between said lens areas, so that said edges extend over said line from the respective points of contact of said laps with the surfaces to be abraded, and from respectively opposite sides of said line; whereby the edges of the respective lens areas adjoining said line are abraded transversely to said line, so as to sharply define the latter; means supporting said laps, permitting oscillation of their respective axes; means limiting such freedom of oscillation of each lap to a plane which is radial to its axis; means arranged to positively rotate said holder; and means arranged to positively rotate the respective laps, independently of each other.



1,347,654. PROCESS OF MAKING MONOLITHIC PAVEMENTS. ALAN JAY PARRISH, Paris, Ill. Filed Aug. 1, 1917. Serial No. 183,907. 2 Claims. (Cl. 94—24.)

1. The herein described process of making monolithic pavements which consists in depositing a layer of plastic concrete, striking off the concrete to a desired shape, adding a thin coating of sand and cement mixed dry to the concrete while the latter is in its plastic condition, placing the bricks on the coating while the latter and

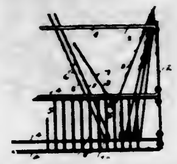


the concrete are in a plastic condition, and filling the space between the bricks or blocks with a cementitious binding material.

1,347,655. LACING-TIP-FORMING MACHINE. GEORGE G. PERKINS, Lynn, Mass. Filed May 11, 1918. Serial No. 233,829. 12 Claims. (Cl. 153—1.5.)

1. A machine for tipping shoe lacings comprising a stationary work support, means for holding a lacing in a stretched condition on said support, means for applying a binder about the lacing so held, and means for severing the lacing and binder between the ends of the latter while the lacing is so held.

1,347,656. GRINDING-MACHINE. FREDERICK H. PERRY, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 22, 1917. Serial No. 143,783. 28 Claims. (Cl. 51—7.)



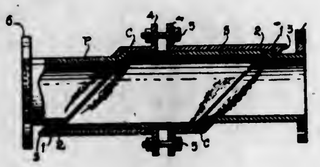
1. In a grinding machine, a grinding element, a movable support, and a plurality of knife holders mounted upon said support constructed and arranged to clamp the knives in grinding position and to be brought by the movement of the support individually into operative relation to the grinding element, said grinding element and knife holders being constructed and arranged for relative traversing movements in directions to grind each blade edge to a predetermined shape.

1,347,657. LEGGING. EMIL PETERS and ANDREW LAMBERT, Chicago, Ill. Filed Mar. 13, 1918. Serial No. 222,236. 1 Claim. (Cl. 36—2.)

In a legging, a body portion comprising an inner fabric and an outer fabric, the latter being a substantially water proof material, the edges of said body portion being overlapped and adapted for sliding adjustment upon each other or for close binding engagement with each other, flexible means criss-crossing said overlapped edges upon both sides of the same for effecting the desired adjustment thereof, binding strips for the overlapped edges of said body portion, a flexible nose terminating said body portion, flexible anchor-shaped stiffening means embedded in said nose, the wings of said anchor-shaped means extending along the sides of said nose and the stem of said means extending along the bridge of said nose, and a strap secured to and depending from said body portion.

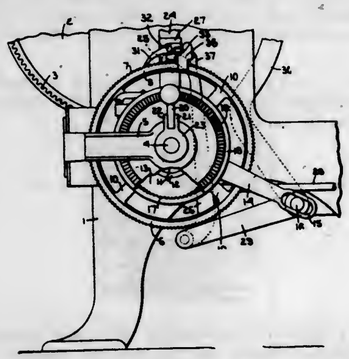
1,347,658. FILING DEVICE. WILLIAM S. PROUDFIT, Grand Rapids, Mich. Filed Apr. 7, 1919. Serial No. 287,938. 14 Claims. (Cl. 129—16.)

1. In a device of the character described; a plurality of containers arranged side by side and adapted to be severally raised and lowered, each container comprising a pair of side members swingably connected at its bottom; vertically disposed guides for the bottoms of the containers in their raising and lowering movement; means for releasably holding the containers severally in raised position.



1,347,659. DUMMY CARTRIDGE. ROBERT EDWIN REARDON, Cherrydale, Va. Filed Mar. 13, 1917, Serial No. 154,564. Renewed Jan. 2, 1920. Serial No. 349,092. 1 Claim. (Cl. 124—15.5.)

A dummy cartridge for target practice rods comprising a casing shaped like a cartridge, an end cap, a longi-



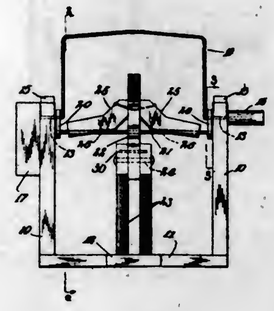
tudinally extending rod, a pin on the rod extending through the cap, a tube surrounding the rod on the interior of the casing, a collar carried by the tube, a spring extending between the collar and the ping on the rod and adapted to retract the rod.

1,347,660. PIPE-COUPLING. JOHN REIBAND, Baltimore, Md. Filed Sept. 6, 1919. Serial No. 322,098. 2 Claims. (Cl. 285—14.)

1. A pipe coupling comprising a pair of pipe lengths having their opposed ends obliquely disposed and defined by outstanding continuous flanges, a sleeve interposed between said ends of the pipe lengths, a collar surrounding each end portion of the sleeve, and means for connecting the opposed ends of the collars, the opposite end portion of each of the collars being obliquely disposed and defined by a continuous flange overlying the flange of the adjacent pipe length.

1,347,661. PAWL-AND-RATCHET MECHANISM. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Jan. 13, 1919. Serial No. 270,795. 4 Claims. (Cl. 74—60.)

1. Pawl and ratchet driving mechanism comprising a ratchet having parallel smooth faces adjacent to the end of the ratchet teeth, a pawl actuating arm and means for reciprocating the same, a pawl pivotally mounted upon said actuating arm positioned to engage said ratchet and provided with an extension having pivotally mounted thereon oppositely disposed members having frictional surfaces engaging the smooth faces of said ratchet and resilient means for forcing said frictional surfaces against said smooth faces.

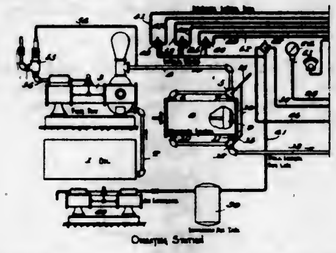


1,347,662. SPARK-PLUG. FRANK ROBINSON, Chicago, Ill. Filed July 15, 1918. Serial No. 245,045. 6 Claims. (Cl. 123—169.)

1. A spark plug embracing a base, an electrode axially disposed therein, an insulating member axially seated within said base and having a chamber therein into which said electrode projects, priming means axially secured within said insulating member, and a second electrode

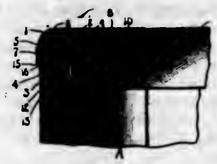
secured on said priming means within said chamber and overlapping said first electrode to form a spark gap between the adjacent sides of said electrodes.

1,347,663. JUMPING TOY. ANDREW SANDOR, New York, N. Y. Filed Feb. 14, 1920. Serial No. 358,587. 1 Claim. (Cl. 46—40.)



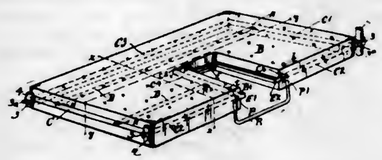
A toy comprising a frame including a base member and standards, a skipping rope element journaled in the upper ends of said standard, a pair of crank arms fixed coaxially to said element and projecting in an opposite direction thereto, a rod connecting the ends of said crank arms, a figure comprising a body suspended on said rods, legs pivotally attached to said body, said legs being so arranged with respect to said body as to cause the feet thereof to engage the said base member as the figure descends and cause the legs to have a folding movement upon the body, and coöperating devices upon the legs and body adapted to prevent dead centering of the said rod and feet with the pivotal axis of the legs, said means including a pin projecting from the body adjacent the upper ends of the legs, said pin being adapted also to engage the legs to limit the folding movement of the latter on the body.

1,347,664. METHOD OF REFINING OIL. FRANK E. WELLMAN, Kansas City, Kans., assignor to The Kansas City Gasoline Company, Kansas City, Kans., a Corporation of Kansas. Filed Mar. 30, 1918. Serial No. 225,683. 2 Claims. (Cl. 196—25.)



2. The process of cracking hydrocarbon liquids which consist in first measuring a charge so that each charge will be the same in volume relatively to the cracking area, then feeding the charges intermittently into the lower part of a highly heated chamber, exposing them therein to heavy pressure while continuing the heating, and drawing off and condensing any desired portion of each charge from the lower part of the chamber, while retaining the low boiling vapors and permanent gases

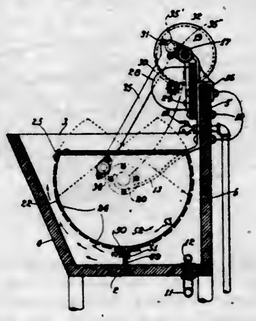
during the cracking operation during successive intermittent additions of liquid hydrocarbons, discharging



each charge at the end of its cracking operation, and maintaining a portion of the pressure upon the product while cooling the same.

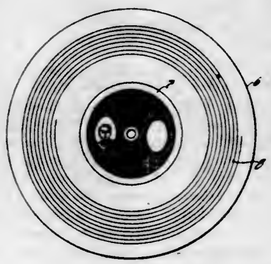
1,347,665. SHEET-METAL CAN. FREDERICK WESTERBECK, St. Louis, Mo. Filed Apr. 30, 1915. Serial No. 24,866. 2 Claims. (Cl. 220—60.)

1. A sheet metal can comprising a body member having its upper portion turned inwardly, downwardly and outwardly to produce a yieldable bead, the metal at the lower inner corner of the bead being curved, and a closure fitted to the inner and outer faces of said bead, said closure being provided with an annular web which extends downwardly from the inner face of the bead and said web being pressed outwardly to produce detents which engage said curved corner of the bead.



1,347,666. HOSPITAL BED-MATTRESS. GEORGE H. AMEY, Fresno, Calif. Filed Oct. 23, 1919. Serial No. 332,727. 3 Claims. (Cl. 5—13.)

2. In a device of the character described the combination of a mattress attached to a rigid rectangular frame, metal flexible straps extending through the mattress attached to opposite sides of the frame, said mattress having a section removed from one side thereof, a slideway around the sides of the opening where said section was removed, a slide adapted to carry a bed pan slidably fitted on the slideway, and a separate section of mattress adapted to cover said opening slidingly fitted on the slideway, substantially as described.

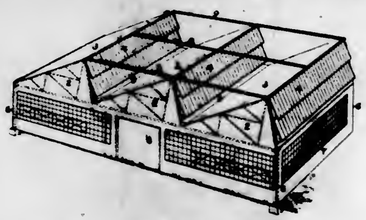


1,347,667. WASHING-MACHINE. HERMAN P. ANDRESEN, Chicago, Ill. Filed Oct. 6, 1919. Serial No. 328,852. 2 Claims. (Cl. 68—21.)

1. A washing machine embodying therein a water container, a clothes container mounted for oscillatory movement therein, a plate arranged on the underside of the clothes container and longitudinally thereof, means hingedly securing the plate to the clothes container whereby said plate can swing toward the clothes container when

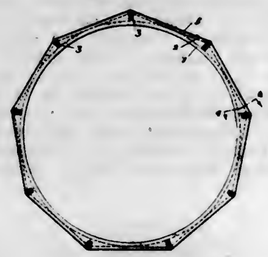
the clothes container moves in one direction, and a stop arranged on the clothes container and positioned to limit swinging movement of the plate when the clothes container moves in the opposite direction.

1,347,668. METHOD OF PRODUCING SOUND-RECORDS. JONAS W. AYLSWORTH, deceased, East Orange, N. J., by Adelaide M. Aylsworth and Savings Investment and Trust Company of East Orange, executors, East Orange, N. J., and EDWARD L. AIKEN, East Orange, N. J., assignors, by mesne assignments, to New Jersey Patent Company, West Orange, N. J., a Corporation of New Jersey. Original application filed June 19, 1912, Serial No. 704,517. Divided and this application filed Sept. 11, 1918. Serial No. 253,652. 9 Claims. (Cl. 18—48.3.)



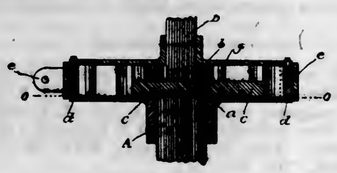
1. The method of making records having a label impression therein which consists in making a master record, making a plate containing a negative or reverse copy of the label impression, placing said plate face downward on said master record or a duplicate thereof, forming a matrix with the said plate secured thereto by electroplating on said record and plate, and impressing said matrix into a plastic record tablet, substantially as set forth.

1,347,669. ROOF STRUCTURE. WALTER F. BALLINGER, Philadelphia, Pa., and CLIFFORD H. SHIVERS, Woodbury, N. J., assignors to Ballinger & Perrott, Philadelphia, Pa., a Firm composed of Walter F. Ballinger and Emile G. Perrott. Filed July 31, 1919. Serial No. 314,526. 4 Claims. (Cl. 108—23.)



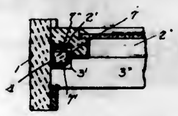
3. An improved roof of saw-tooth construction which comprises a plurality of parallel truss forms providing saw-tooth framing for supporting the roof covering portions and upright sash, the framing for supporting the sash consisting of rectangular open-mesh trussed girders re-

spectively arranged transversely at the high portions of each of the saw-tooth sections in the roof and supporting it intermediate of its ends against sagging, tension chord members extending longitudinally of the roof at its bottom portion for its full length, combined with longitudinal



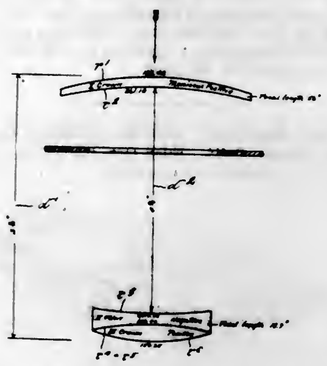
upper compression chord members arranged above the main portion of saw-tooth roof portions and secured to the framing thereof including the upper portions of the transverse open-mesh trussed girders, and supports for the front and rear ends of the roof.

1,347,670. FUSELAGE. WALTER H. BARLING, London, England. Filed Nov. 24, 1919. Serial No. 340,188. 15 Claims. (Cl. 244—30.)



7. In a structure of the character described, the combination with a series of transverse frame members each comprising a base hoop, a series of tangential bars arranged about the periphery of said hoop and having their adjacent ends spaced apart to form recesses, and side members rigidly secured to both said hoop and said bars on both sides thereof, of longitudinal frame members mounted in the recesses between the ends of the tangential bars of the respective transverse frame members, and covering material resting upon and secured to the outer surfaces of said tangential bars and said longitudinal frame members.

1,347,671. PLANETARY ECCENTRIC SYSTEM OF GEARING. WALTER BELSHAW, Everett, Wash., assignor, by direct and mesne assignments, of four-fifths to Belshaw Engine Co., Everett, Wash., a Corporation of Washington. Filed Aug. 12, 1915. Serial No. 45,223. 4 Claims. (Cl. 74—35.)



1. The combination of a member having an eccentric pin, a drum having internal teeth, a gear journaled on the eccentric pin and provided with external teeth meshing with the internal teeth of the drum and with internal teeth of less length than the external teeth, a pinion having teeth of the same length as the internal teeth of the gear and meshing therewith, a second member carrying the pinion, and means for braking the drum.

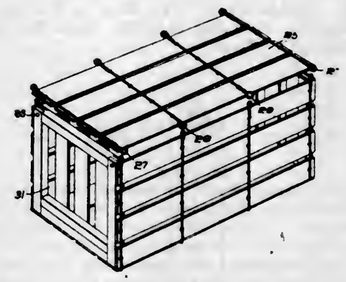
1,347,672. WEATHER-STRIPPING FOR WINDOWS. MILLARD WHITE BEST, Wentworth, Ontario, Canada. Filed Apr. 18, 1918. Serial No. 228,366. 1 Claim. (Cl. 20—69.)

In a weather strip, the combination with the parting strip 4 of the window, and the upper and lower sashes located on each side thereof and adapted to slide parallel thereto, the sashes each having a longitudinal notch in their adjacent faces, said notches constituting a longitudinal recessed portion when placed in the operative position in the window frame, of greater width and depth than the parting strip 4, and into which the said parting strip extends, of an integrally formed strip of resilient metal 7 secured to the front of the parting strip 4 and having its free sides flared outwardly unconfined from the point of connection with the parting strip 4 to points clear of the corners thereof, said free ends then being bent backwardly to present convex portions against the respective walls of the notches in the sashes.

1,347,673. PHOTOGRAPHIC OBJECTIVE. LLOYD C. BISHOP, South Bend, Ind. Filed Oct. 16, 1919. Serial No. 331,218. 4 Claims. (Cl. 88—57.)

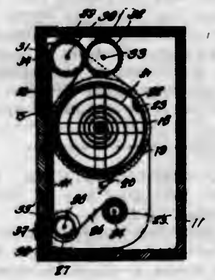
2. A photographic objective comprising a chromatically fully corrected back lens of relatively short focal length and an uncorrected front lens whose focal length is from 3 to 10 times larger than that of the back lens.

1,347,674. DRIVE-BELT FOR PULLEYS. AUGUST BLOESINGER, Akron, and FRANK D. HOWE, Cuyahoga Falls, Ohio, assignors, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed Feb. 1, 1918. Serial No. 214,994. 10 Claims. (Cl. 74—21.)



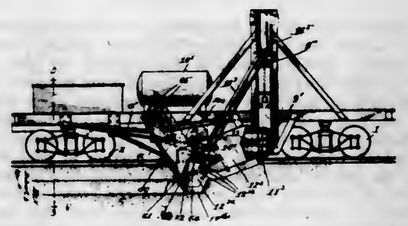
2. Driving means comprising a grooved pulley, a grooved driving belt therefor, and a tension spring inserted in said driving belt groove to increase the friction of said driving belt with respect to the pulley.

9. A driving means for a grooved pulley comprising a belt adapted to engage in the groove of a pulley, and elas-



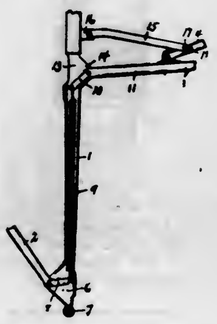
tic tension means engaging said belt to conform the belt to the pulley groove and thereby increase the friction between the belt and pulley.

1,347,675. BOX. CHARLES H. BOMBARDIE, South Bend, Ind., and PAUL F. WEGNER, Chicago, Ill., assignors to Wirebounds Patents Company, Kittery, Me., a Corporation of Maine. Filed Jan. 9, 1917. Serial No. 141,472. 11 Claims. (Cl. 217—43.)



1. A wirebound box comprising separate sections of side material and cleats for the sides and bottom of the box connected together in foldable relationship by binding wires secured to cleats of said sections; and separable end sections having transverse cleats secured thereto detachably engaging said cleats of the side sections in a manner to prevent inward or outward displacement of said end sections and hold the parts in box form independent of a lid.

1,347,676. SPEED-RECORDER. HARRY A. BOWDISH, Eagle Pass, Tex. Filed Jan. 4, 1918. Serial No. 210,324. 2 Claims. (Cl. 234—30.)

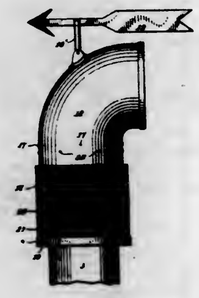


2. An instrument of the class described comprising a casing divided into compartments, one of which is equipped with an outwardly opening door, a frame pivoted in said door-equipped compartment to swing outwardly on the opening of the door, a spring controlled drum mounted in said frame, a pair of contacting rollers positioned above said drum, one being carried by the frame and the other by the casing, a paper carrying roll mounted below said drum in said frame, a paper guide mounted in said frame, the paper fed from said roller being secured to said drum and passed around said guide and between the first-mentioned rollers, and means carried by said door for holding said frame in operative position, and the first-mentioned rollers contacting.

1,347,677. RAILROAD-WAY CONSTRUCTION AND MAINTENANCE CAR. ROBERT E. BRESSLER, Hammond, Ind., assignor to O. F. Jordan Company, East Chicago, Ind., a Corporation of Indiana. Filed Dec. 30, 1918. Serial No. 269,016. 8 Claims. (Cl. 37—58.)

1. The improvements herein described comprising a car, in combination with a side wing having its inner end pivoted thereto, an outer wing horizontally and vertically pivoted to the outer end of the side wing, means for locking the outer wing against movement on its horizontal pivot, said outer wing in operative position being at an angle to the face of the side wing and said operating means being formed to fold both the side wing and the outer wing into substantially parallel relation to the side of the car.

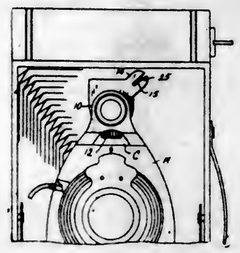
1,347,678. BOW-SOCKET. DONALD A. BREWER, Cortland, N. Y., assignor to The Brewer-Titchener Corporation, Cortland, N. Y., a Corporation of New York. Filed Feb. 2, 1917. Serial No. 146,134. 8 Claims. (Cl. 296—116.)



8. In a vehicle top, a hollow standard adapted to be pivotally secured to a vehicle body, an outrigger bow arm, a link pivotally connected respectively to said outrigger bow arm and said standard, and having a free end extended to the rear of its pivot, and a spring carried within the standard and connected directly to said free end of the link.

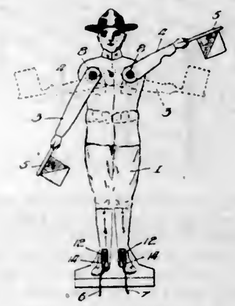
1,347,679. VEHICLE-TIRE. EGBERT B. BROWN, Los Angeles, Calif., assignor to O. W. Fort and H. R. Taylor, Los Angeles, Calif. Filed Oct. 25, 1917, Serial No. 198,431. Renewed June 16, 1920. Serial No. 389,463. 1 Claim. (Cl. 152—10.)

A vehicle tire of the character referred to consisting of an endless tire body having therein an endless, closed air chamber, and an inflating tube through the body of said tire for filling said air chamber, said air chamber being formed in said body without a separate inner tube, said tire body having formed integrally therewith attaching beads around its inner periphery, said air chamber being spaced from the rim engaging portion of said tire body, the size of said air chamber in diameter, in cross section of said tire body, relative to the cross sectional diameter of said tire body, being such that the walls formed by said body at opposite sides of said air chamber are sufficiently heavy to withstand air pressure within said chamber without outside rims for embracing the opposite sides of said tire, substantially as shown.



1,347,680. SPARK-ARRESTER. ROBERT BROWN, Montrose, Colo. Filed May 24, 1920. Serial No. 383,803. 5 Claims. (Cl. 183—40.)

1. The combination with a chimney provided with a rotatable cowl and a cinder receptacle beneath the same with outlet openings in the cinder receptacle, of means carried by the cowl and movable therewith for shifting the cinders to the receptacle openings.

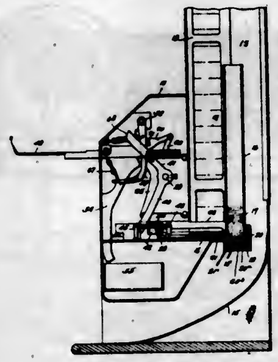


1,347,681. MASKING ATTACHMENT FOR PHOTOGRAPHIC FINDERS. GUY R. CALEY, Silesia, Mont. Filed July 16, 1919. Serial No. 311,214. 3 Claims. (Cl. 88—15.)

1. A masking attachment for the view finders of cameras comprising a front plate having an aperture for the finder lens and having an extension diagonal to the long axis of the front plate, the extension being diagonally slotted, said front plate having means whereby it may be held from rotation over the finder, a cap detachably engageable with the top of the finder and having an aperture in the top of the cap, and a masking plate disposed beneath the cap and having a rectangular aperture, the masking plate being rotatable within the cap through a

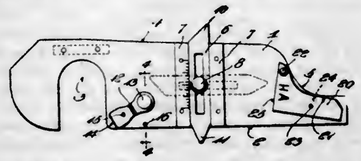
quarter circle and having a diagonally extending arm engageable in the slot of the front plate whereby the masking plate shall be rotated through a quarter circle as the finder is rotated through a quarter circle relative to the front plate.

1,347,682. SEMAPHORE TOY. ELSA A. CAZIARC, Fort Sheridan, Ill. Filed July 11, 1918. Serial No. 244,454. 3 Claims. (Cl. 46—40.)



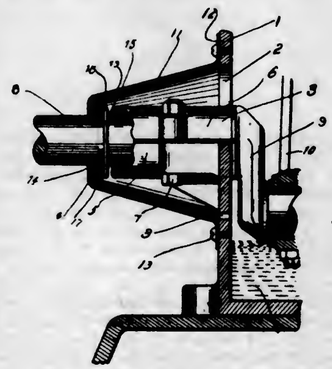
1. A device of the character described, comprising a figure having flag-carrying arms hinged to swing in imitation of a person signaling in accordance with the two arm semaphore system, springs tending to move the arms in one direction, two sets of pulleys near the bottom of said figure arranged in pairs, one at the rear and the other at the front of the figure, and a cable extending from each arm down through said figure in position to permit it to be passed over either of the pulleys of the corresponding pair and thus permit the arms to be manipulated either from the front side of the figure or from in rear of the figure.

1,347,683. SLOT VENDING-MACHINE. SALVADOR CLAPERS, Baltimore, Md. Filed May 22, 1919. Serial No. 298,951. 7 Claims. (Cl. 194—63.)



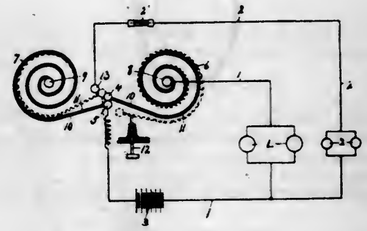
1. In a coin-controlled vending machine, an article ejector, ejector operating means, a detent for locking the ejector operating means, a coin-chute, means for delivering a coin into the chute, a pivoted member in the chute and having an opening, means carried by said member for operating the detent to release the ejector operating means,

means in the chute for supporting a coin over the opening in the pivoted member, and means controlled by the afore-



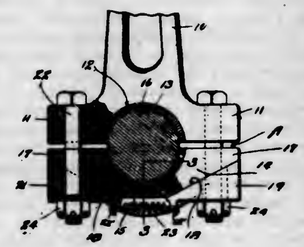
said coin-delivery means for pushing the coin against the pivoted member for swinging the same to operate the detent.

1,347,684. LOCOMOTIVE AND CAR WHEEL GAGE. FRANK CURRAN, Susquehanna, Pa. Filed Apr. 10, 1919. Serial No. 289,022. 5 Claims. (Cl. 33—203.)



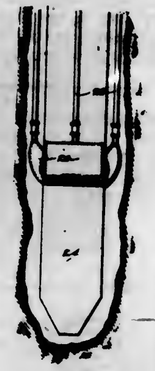
1. In a locomotive and car wheel gage, a plate having in one edge a notch of a width insufficient to fully receive a wheel flange of prescribed width which is not dangerously worn, and an indicator mounted on said plate adjacent said notch and projectable to a single operative position with its outer end spaced from said plate edge a predetermined distance, said indicator being adapted to strike the wheel tread if the flange is worn to a condemning degree at a prescribed distance from the tread.

1,347,685. SPLASH LUBRICATING SYSTEM. EVERETT B. CUSHMAN, Topeka, Kans. Filed May 21, 1919. Serial No. 298,634. 6 Claims. (Cl. 184—13.)



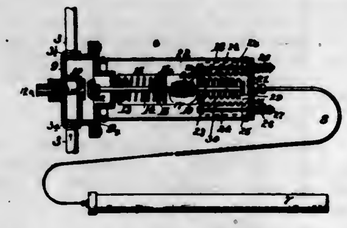
5. In combination, a crank case having a shaft opening and a drain opening below the shaft opening, a frusto-conical housing detachably secured to the crank case, surrounding both openings at its base and closed at its free end except for a shaft opening, a crank shaft projecting through the crank case opening and through said opening in the housing, a collar on the shaft within the housing, a packing ring on the shaft between the collar and the end of the housing, and a retainer cup held by the collar and partially surrounding the packing ring.

1,347,686. THERMO-ELECTRIC SWITCH. ALBERT E. DOMAN, Elbridge, N. Y., assignor to Dyneto Electric Corporation, Syracuse, N. Y., a Corporation of New York. Filed Aug. 2, 1918. Serial No. 247,918. 5 Claims. (Cl. 200—122.)



1. A thermo electric switch comprising in combination with an electric circuit, coöperative contacts in said circuit a thermostatic support for one of said contacts connected in the circuit, and a separate thermostatic support for the other contact external to said circuit, each support being arranged to oppose the movement of the other support under like temperatures and to cause the separation of the contacts when the temperature of the support in the circuit greatly exceeds that of the external support.

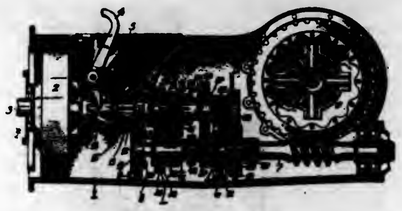
1,347,687. PISTON-ROD JOURNAL-BEARING. WILLIAM M. ELLIS and ELMER E. SHERMAN, Patoka, Ill. Filed July 12, 1919. Serial No. 310,330. 2 Claims. (Cl. 64—55.)



1. The combination with a piston rod, of a cap, there being a journal bearing formed between said piston rod and cap, the undersides of the end portions of said cap being provided with inclined faces, wedge blocks bearing against said inclined faces, a retractile spring connected to said wedge blocks for drawing the same toward each other, a bolt passing through parts of the piston rod, said caps, and said wedge blocks, and a nut on the bolt and bearing against the wedge blocks.

1,347,688. METHOD AND APPARATUS FOR SINKING PILING. ELMER FORREST HEYNE, Lincoln, Nebr. Filed July 3, 1918. Serial No. 243,188. 7 Claims. (Cl. 61—80.)

1. The improved method of aiding the sinking of piling which consists in scraping the sides of the piling and discharging water directly against the surface of the piling from points beyond the sides of the piling as described.

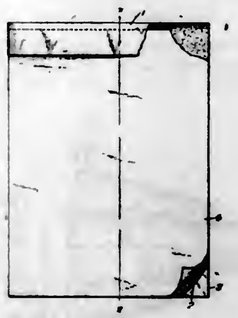


1,347,689. THERMOSTATIC CONTROL DEVICE. JAMES LOGAN FITTS, Pensauken township, Camden county, N. J., assignor to Warren Webster & Company, a Corporation of New Jersey. Filed Oct. 26, 1916. Serial No. 127,780. 16 Claims. (Cl. 236—99.)

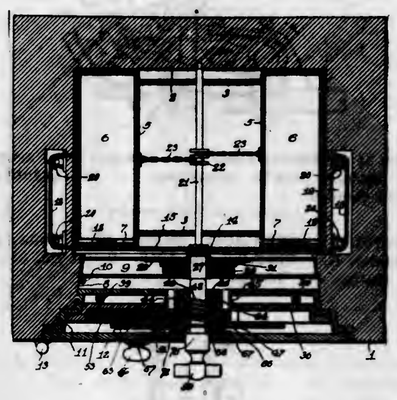
5. In a device of the character stated, the combination of a liquid-tight thermostatic vessel, a pressure motor comprising a single liquid-tight chamber having outer and inner concentric expansible casing members normally independently expansible in opposite directions, spring means for preventing the expansibility of the outer casing alone until a predetermined pressure is exceeded, movable means actuated by the inner casing only, means to resist the movement of the movable means after a given movement while permitting the expansion of the expansible casing members, and a tubular connection between the interior of the thermostatic vessel and chamber of the motor between the concentric members, said vessel, chamber and tubular connection full of an expansible liquid, whereby when a full collapsing movement of the inner casing is had an expansion movement thereof is provided by expansion of the outer casing.

1,347,690. TRANSMISSION MECHANISM FOR TRACTORS. HENRY FORD, Dearborn, Mich. Filed July 27, 1918. Serial No. 247,022. 4 Claims. (Cl. 74—58.)

1. The combination of a transmission housing, a worm shaft therein and parallel with the bottom of said housing, a clutch in said housing out of alinement with said worm shaft, and a transmission mechanism between said clutch and said worm shaft, said transmission mechanism including a plate detachably mounted in said housing between said clutch and said worm shaft and adapted when removed to carry with it a portion of said transmission mechanism.

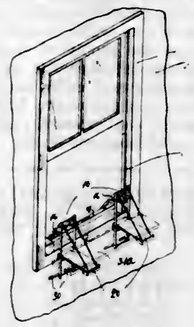


1,347,691. WRENCH. GEORGE FORTON, Detroit, Mich. Filed Jan. 13, 1920. Serial No. 351,118. 9 Claims. (Cl. 81—60.)



1. A wrench comprising a handle member having a bifurcated end formed with alined openings and having a configuration to produce a ratchet member space, said member carrying a pawl operative within the space, a ratchet member having an opening adapted to aline with the handle member openings when in operative position, and a work-engaging member having a shank insertible into the alined openings, said shank carrying a projecting lug, said ratchet and handle members having recesses complemental to said lug to permit positioning of the lug within the ratchet recess.

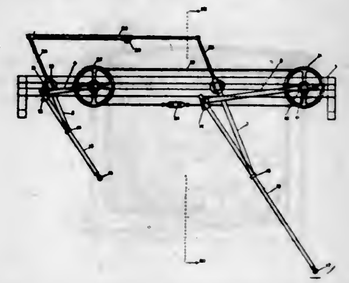
1,347,692. HOLDER FOR CARBON-SHEETS. WILLARD STANLEY FREEMAN, New York, N. Y. Filed Dec. 19, 1919. Serial No. 346,099. 2 Claims. (Cl. 282—29.)



1. In combination with a carbon sheet, of a cap into which one end of the sheet is fitted, said end of the sheet being secured to that wall of the cap which is adjacent to the carbon face of the sheet and spaced apart from the free edge of the said wall to permit a sheet of letter paper to be arranged on each face of the carbon sheet, with the end of the letter paper sheet inserted between the carbon sheet and the adjacent wall of the cap whereby the cap serves as a guide for the placing of the sheets in proper relation with respect to the carbon.

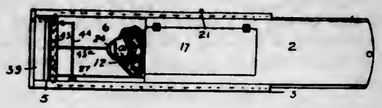
1,347,693. SAFE. MARCUS GARFINKEL, Detroit, Mich. Filed Feb. 18, 1920. Serial No. 358,540. 9 Claims. (Cl. 109—1.)

1. A safe comprising a body having a chamber therein, shiftable compartments in the chamber of said safe body and movable to and from each other, a door for the safe, and means carried by said door adapted for shifting said compartments, said means including a reciprocable and rotatable pin for moving said compartments away from each other and a spring for moving said compartments toward each other.



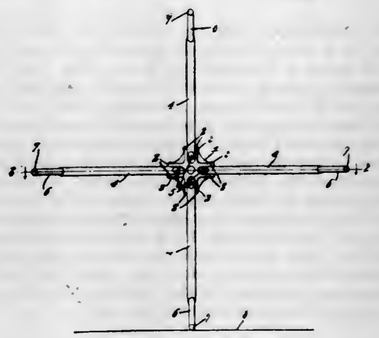
1,347,694. WINDOW-FRAME SUPPORT. EDWARD GELBKE, Jersey City, N. J. Filed Feb. 17, 1920. Serial No. 359,291. 2 Claims. (Cl. 304—24.)

1. A device of the class described comprising vertical supporting members, a plurality of horizontal rods secured between said members, a platform rotatably mounted upon one of said rods, cables attached to the uppermost of said rods and to the ends of said platform, and means for attaching the device to the wall of a building.



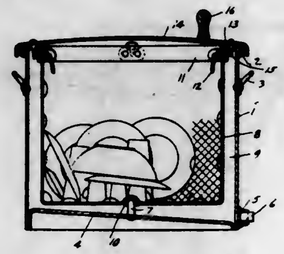
1,347,695. PANTOGRAPH. GEORGE GILLESPIE, West View, Pa. Filed Nov. 18, 1919. Serial No. 338,969. 4 Claims. (Cl. 33—25.)

1. A pantograph including in its structure two pairs of rotary shafts and a stylus associated with each pair, mechanical connection between each stylus and the two shafts of one of the said pairs, whereby shaft rotation is a proportionate expression of stylus movement resolved into two angularly disposed directions, and mechanical



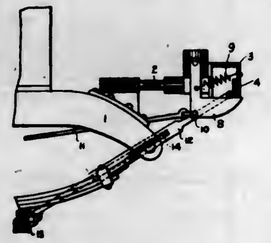
rotation-imparting connection between each shaft and the corresponding shaft of the other pair, substantially as described.

1,347,696. TOY. IVAN GRGIC, Conway, Pa. Filed Sept. 18, 1919. Serial No. 324,370. 1 Claim. (Cl. 46—40.)



A figure toy comprising a pair of pivoted spring controlled miniature figures representing characters, means for normally maintaining said figures simultaneously in a lowered position, means whereby one of said figures is projected upwardly in advance of the other, means whereby the other figure is projected upwardly simultaneously with the lowering of the first mentioned figure, a spring controlled shiftable element normally in a lowered position, and means connected to the second mentioned figure for releasing said element to permit of the element being projected upwardly.

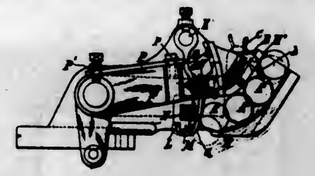
1,347,697. REEL. WILLIAM F. HARBAUGH, Lakota, N. D. Filed Oct. 14, 1919. Serial No. 330,654. 2 Claims. (Cl. 242—77.)



1. In a device of the class described, a hub; arms; means for pivoting the arms intermediate their ends to the hub for lateral swinging movement with respect to the hub and having wire-receiving elements at their outer ends; and removable securing devices passing through the inner ends of the arms and the hub.

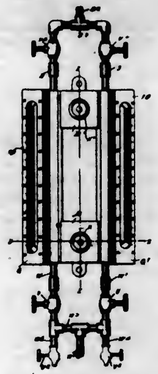
1,347,698. DISH-WASHING MACHINE. MARGARET HIPPS, Santa Barbara, Calif. Filed Aug. 29, 1918. Serial No. 251,970. 1 Claim. (Cl. 141—9.)

A dish washer comprising a tank having an open upper end, a basket in said tank spaced from the wall thereof, a central bearing at the bottom of said basket for supporting the entire weight of the latter, ears projecting outwardly from the upper edge of said basket with their outer ends in sliding contact with the tank wall, a cover having a depending flange loosely surrounding the upper end of said tank wall, a handle for turning said cover, and teeth depending from said cover and engaging said ears to turn the basket; the contact of said ears with the casing wall serving to prevent tilting of the basket whenever the cover is removed, thereby facilitating engagement of said teeth with the ears when the cover is to be replaced.



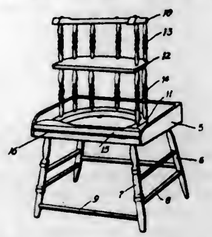
1,347,699. COMBINED BUMPER AND FENDER FOR AUTOMOBILES. SAMUEL EDWIN HORNE, Toronto, Ontario, Canada. Filed Aug. 22, 1919. Serial No. 319,210. 1 Claim. (Cl. 293—41.)

The combination with the forward end of a vehicle frame, of a pair of forwardly directed brackets secured to said frame, a resiliently projected casing constituting a bumper supported upon said brackets and having the lower portion thereof open, a foldable fender secured in said casing and arranged to be completely contained therein when in folded form, a pair of substantially L-shaped patches having the vertical arms thereof pivoted to the brackets and the horizontal arms thereof normally disposed beneath the open portion of the casing to support the folded fender therein, a connecting rod extending between said catches below the pivots thereof, springs engaged with said catches and normally holding the same in fender supporting position, and means for swinging said catches to fender releasing position including a control rod attached to said connecting rod.



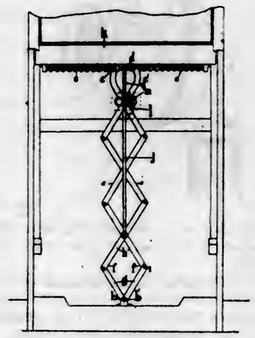
1,347,700. WEFT-REPLENISHING MECHANISM FOR LOOMS. FRIEDRICH ALBERT KUENY, Mülhausen, Germany. Filed Apr. 24, 1916. Serial No. 93,165. 8 Claims. (Cl. 139—85.)

1. In a weft replenishing mechanism, the combination with a magazine, a hammer, and a yielding bobbin support at the end of the magazine; of movable means cooperating with the support to exert pressure on the head



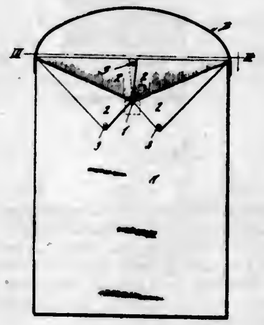
of one of the bobbins about to be transferred, to maintain said bobbins parallel independent of the quantity of thread thereon.

1,347,701. WATER-GAGE. DANIEL M. MCCOOK, Manchester, Ga. Filed Oct. 20, 1919. Serial No. 331,867. 1 Claim. (Cl. 73—54.)



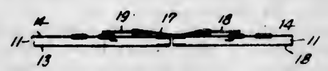
In combination, a pair of gages, each comprising a body having a chamber formed therein and a transparent plate closing said chamber, pipes connected to said chambers for supplying steam and water thereto, valves in said pipes for controlling the supply of steam and water to one of the chambers independently of the other, and bridge pieces connecting said gages having ducts formed therein for effecting communication between said chambers at the opposite ends thereof, and cocks in said bridge pieces for controlling said ducts.

1,347,702. COMBINATION CHILD'S CHAIR. GEORGE W. MARTIN, Philadelphia, N. Y. Filed Oct. 25, 1919. Serial No. 333,334. 1 Claim. (Cl. 155—39.)



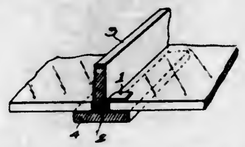
In an article of furniture, a table, a chair comprising an upper and a lower arcuate member, an intermediate seat member, vertical posts connecting the arcuate members and seat member, a solid bar rigidly connected with the forward portions of one of the arcuate members, the solid bar being of a length equal to the length of a table, means for connecting the solid bar to the table to permit movement of the chair and bar with relation to the table and said table having end and side members.

1,347,703. BALANCED WINDOW-SASH. EMILE MASSIS, London, England. Filed July 16, 1919. Serial No. 311,291. 5 Claims. (Cl. 268—4.)



1. A balanced window sash, comprising a lazy tongs device, a fixed pivot for the lower end of said lazy tongs, sliders connected to the upper extremities of said lazy tongs, a guide tube secured to the bottom of said sash, said sliders reciprocable in said guide tube, and springs inclosed in said tube acting upon said sliders.

1,347,704. COTTON-PICKER'S SACK. ADOLPH E. MEYER, Webster Groves, Mo., assignor to Textile Products Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 1, 1919. Serial No. 341,761. 1 Claim. (Cl. 150—2.)



A reversible cotton picker's sack having two walls each divided at its upper end intermediate of its longitudinal edges, providing flaps at opposite sides of the point at which the wall is divided, said flaps being provided with means whereby the flaps carried by either wall may be connected adjacent the line of division in the wall, and a suspension member secured to said longitudinal edges at the upper end of the sack.

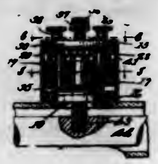
1,347,705. FASTENING DEVICE. JACK MILLER and JOHN MILLER, Montreal, Quebec, Canada. Filed July 1, 1919. Serial No. 308,015. 5 Claims. (Cl. 2—143.)

1. A garment band presenting outer and inner plies spaced apart to provide an intervening pocket, the inner ply of the band being apertured adjacent each end thereof, and a fastening device for the ends of the band having hooked ends adapted to be inserted through the openings in the band ends and concealed from view in the pocket by the outer ply of the band.

1,347,706. GLASS-PANE HOLDER. ANTIME MOTTEAU, Buenos Aires, Argentina. Filed Feb. 14, 1919. Serial No. 276,984. 2 Claims. (Cl. 189—77.)

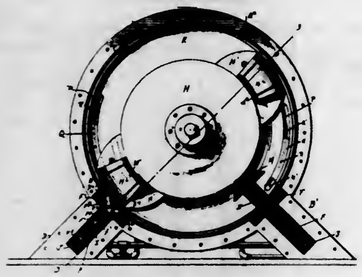
1. Means for holding glass panes in frames, comprising a bar of angle section embodying a pair of longitudinal webs arranged at right angles to each other, one web providing support for a pair of panes at opposite sides of the other web, and the latter web being provided with a transverse opening; and a metal strap having its central portion mounted in said opening and its two end portions first bent vertically against the opposite side faces of the second-named web directly adjacent the opening and then bent laterally in opposite directions away from said second-named web directly against the outer faces of the panes so as to lie flat thereagainst.

1,347,707. HAIRPIN. CHARLES R. NALLE, Fort Worth, Tex. Filed Sept. 11, 1919. Serial No. 323,145. 2 Claims. (Cl. 132—22.)



2. A hair pin comprising, a U-shaped member having oppositely arranged tubular legs which are open at their forward ends, and provided with apertures at their rear ends, and a yoke-shaped member mounted to slide within the tubular legs and carrying resilient fingers at their forward ends which are integral therewith, said resilient fingers being flattened and substantially U-shaped when projected in advance of the forward open ends of the tubular legs, said fingers being adapted to be retracted within the tubular legs and to permit of the separation of the U-shaped member and the yoke-shaped member.

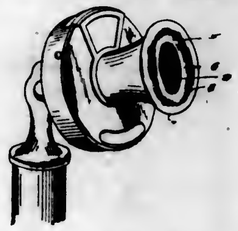
1,347,708. COMBINATION-LOCK. HARRY W. PONTING and ARTHUR J. WATLING, Junction City, Kans. Filed May 26, 1917. Serial No. 171,247. 2 Claims. (Cl. 70—53.)



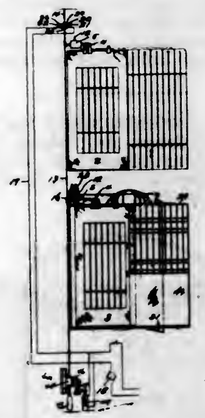
1. In a lock for automobiles, motor cycles and the like, a face plate, a back plate, a casing associated with the

face plate and back plate to form a housing, posts interposed between the face plate and the back plate, said back plate having recesses forming bearings and the face plate having apertures, dial shafts rotatable in the recesses and apertures, said dial shafts having longitudinally extending slots, shoulders on the said shafts, springs interposed between the shoulders and the face plate, said springs

each comprising an apertured member, lying on a shoulder of a shaft and laterally curved with its edge engaging the plate, a locking bolt slidable in the casing, means for holding the locking bolt against rotation, pins radiating from the locking bolt and adapted to oscillate in the slots of the shafts, shoulders on the upper ends of the shoulders near the lower ends of the shafts for engaging the pins.



1,347,709. ROTARY ENGINE. JOHN G. PORTER, Weaverville, Calif. Filed July 11, 1919. Serial No. 310,045. 9 Claims. (Cl. 121—77.)

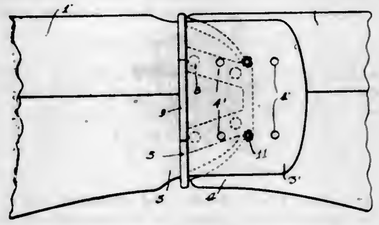


1. A rotary engine including a stator comprising an annular motive fluid chamber, circular in cross section, and abutment pockets or recesses radiating from the periphery thereof and communicating with said annular chamber, a rotor rotatably mounted within said stator and comprising a disk and radially disposed piston heads fitting within said annular chamber, cam plates projecting from the ends of said piston heads valved abutments slidably mounted in the radial pockets of the stator, motive fluid pressure inlet and outlet supply means communicating with said annular chamber, the inlet means also communicating with the abutment pockets behind the valved abutments and forcing them into the annular chamber, and, means carried by said abutments to open the valve therein upon impact with a piston head, whereby pressure is released behind the abutments and through the same into the annular chamber between the abutments, and to permit the abutments to recede into their pockets.

1,347,710. SANITARY TELEPHONE ATTACHMENT. ELLIS M. POTTER, New York, N. Y. Filed July 28, 1919. Serial No. 313,709. 1 Claim. (Cl. 179—185.)

As a new article of manufacture, a disinfecting cap for telephone transmitter mouthpieces, comprising a disk of thin sheet paper having its peripheral edge curled backwardly and inwardly to form a peripheral bead adapted to snugly engage the periphery of the mouthpiece, said disk having a central opening and an antiseptically treated fabric covering said opening, that portion of the disk between said openings and said rim being depressed to concave shape when not in use, whereby when the peripheral bead is forced over the mouthpiece, the depressed portion will stretch and cause the disk to be tightly clamped in place.

1,347,711. ELEVATOR-CONTROL SYSTEM. HORATIO C. RANDALL, San Francisco, Calif.; Annie Louise Randall executrix of said Horatio C. Randall, deceased. Filed Mar. 20, 1919. Serial No. 283,852. 13 Claims. (Cl. 187—29.)

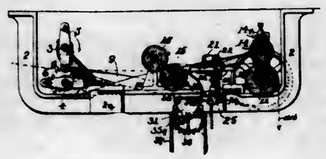


1. The combination with an elevator shaft having a plurality of doors, of a car in said shaft, a motor for moving the car, a circuit for said motor, a switch in said circuit, means arranged at each door for locking the door in the closed position, and means connecting all of said locks with said switch whereby the unlocking of any door opens the switch.

3. The combination with an elevator shaft having a plurality of doors, of a car in said shaft, a motor for moving the car, a circuit for said motor, a switch in said circuit, means arranged at each door for locking the door in the closed position, a vertically movable wire connected to said switch and to said locking means, movement of the wire in one direction serving to open the switch and in the other direction to close the switch, unlocking the door serving to move the wire in the first direction and locking the door serving to move the wire in the second direction.

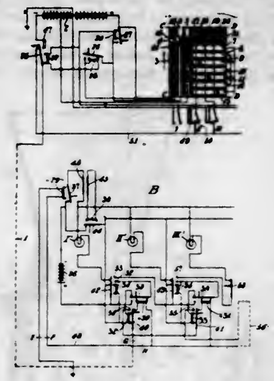
1,347,712. ADJUSTABLE COLLAR. JOHN L. REAM, Axtell, Kans. Filed Aug. 8, 1919. Serial No. 316,151 1 Claim. (Cl. 54—21.)

In an adjustable collar, opposed padded sections, the lower end of one of said sections being formed into an apertured tongue, a buckle secured to the opposite collar section, said buckle including a body portion, a loop extending upwardly and at right angles to the body portion, lugs formed on the body portion, said lugs extending upwardly therefrom and spaced from the loop, said lugs being in parallel relation with the loop, the tongue adapted to extend through the loop and engage over the lugs, for holding the tongue within the loop, and the upper



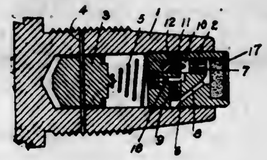
ends of the lugs terminating at points above the plane of the lower edge of the loop to normally prevent displacement of the tongue.

1,347,713. PROCESS OF DRY DISTILLATION. ERIK LUDVIG RINMAN, Djursholm, Sweden. Filed Nov. 6, 1918. Serial No. 261,319. 1 Claim. (Cl. 203—6.)



The process of dry distillation of the waste liquors of the cellulose manufacture, as well as other similar waste liquors, which consists in dry distilling said waste liquors with strong bases in the presence of steam at a temperature maintained below 200° C. until the water in the mass has substantially distilled off, afterward maintaining the temperature between 200° C. and 300° C. until methyl alcohol has been formed and substantially distilled off, and finally maintaining the temperature between 300° C. and 500° C. as long as acetone is formed and distils off.

1,347,714. CLOTH OPENER, SPREADER, AND GUIDER. WILLIAM S. ROWLEY, Palmyra, N. J., assignor to H. W. Butterworth & Sons Company, a Corporation of Pennsylvania. Filed Jan. 28, 1918. Serial No. 214,120. 4 Claims. (Cl. 26—18.)

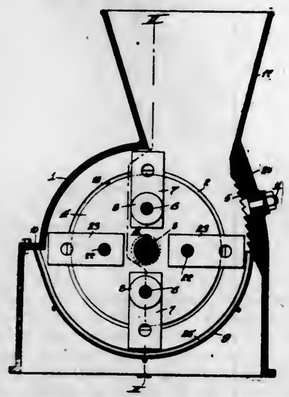


3. In a machine of the character stated, the combination of the scroll rolls and a pair of draw rolls for gripping and feeding the cloth under pressure, with two guider devices arranged between the said scroll and draw rolls and separated a distance substantially equal to the width of the fabric to be treated, said guiders comprising independent pairs of rolls having their axes respectively arranged at an angle to the axes of the scroll and draw rolls and between which the selvages of the fabric respectively travel, independent means for causing the said pairs of guider rolls to press upon the cloth and release it alternately said means arranged for being controlled as to time of action by the selvages of the fabric, transverse guiding means arranged parallel to the scroll rolls, separate carriages for respectively supporting the guider devices and adjustably supported upon said guiding means whereby the guider devices may be adjusted parallel to the axes of the scroll rolls, mechanical adjusting means for simultaneously adjusting the carriages in opposite directions upon the guiding means, and downwardly extending hand operable means for operating the mechanical adjusting means.

1,347,715. SELECTIVE CONTROL SYSTEM. AXEL UNO SÄRNMARK, Stockholm, Sweden. Filed Sept. 9, 1916. Serial No. 119,196. 7 Claims. (Cl. 177—353.)

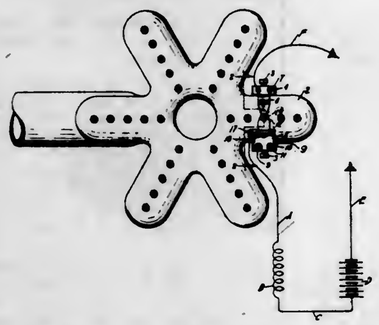
1. In a selective control system, the combination of means at the sending station for sending to the receiving station positive as well as negative pulsations in variable sequence and number, an electrical connection between the sending station and the receiving station, receiving apparatus at the receiving station, circuits controlling the said receiving apparatus, relays at the reconnection of different receiving apparatus according to ceiving station at least one of said relays being polarized and adapted to be actuated by pulsations of one polarity said relays controlling the said circuits for selective the number of pulsations of the polarity of said polarized relay, a source of current at the receiving station, and at least one polarized relay at the said station adapted to be actuated by pulsations of the other polarity and controlling the said source of current so as to connect the same to the receiving apparatus selected by the first-named relay, substantially as and for the purpose set forth.

1,347,716. SELECTIVELY-ACTING FUSE. JOHN B. SEMPLE, Sewickley, Pa. Filed Oct. 16, 1919. Serial No. 331,087. 1 Claim. (Cl. 102—39.)



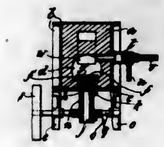
A selectively acting fuse for a projectile including a block in which are formed two paths of ignition transmission from percussion cap to burster charge, one of said paths being a quick-action and the other a delay-action path, a rigid imperforate plug, under all lesser strains immovable and aside from either path of ignition transmission, but under the strain of impact upon heavy armor movable within the block to a position of closure of said quick-action ignition path, substantially as described.

1,347,717. HAMMER-MOUNTING FOR PULVERIZERS AND THE LIKE. HARRY J. SHELTON, St. Louis, Mo. Filed Oct. 31, 1917. Serial No. 199,595. 1 Claim. (Cl. 83—11.)



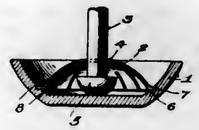
A hammer mounting for a pulverizer comprising a main shaft, a pair of spaced apart hammer shaft supporting members rigidly secured to said main shaft, each of said supporting members having a pair of diametrically op-

posing bosses formed integral therewith, said supporting members being arranged on said main shaft so as to have their respective pairs of bosses in horizontal alinement, a hammer shaft mounted in each pair of alining bosses of said supporting members, a plurality of spaced apart hammers loosely mounted on said shafts between said supporting members, each of said bosses of each supporting member abutting an adjacent hammer, a second pair of ham-



mershafts carried by said supporting members having spaced apart hammers mounted thereon, said bosses of said supporting members each being of a depth equal to the thickness of each of said washers, and providing means for arranging the hammers of said first mentioned hammer shafts in staggered relation to the hammers of said second mentioned hammer shafts and a washer the approximate thickness of each of said hammers, mounted on said hammer shafts between each of said hammers.

1,347,718. IGNITING DEVICE. CARL H. SHUFORD, Dallas, Tex. Filed Feb. 7, 1919. Serial No. 275,508. 2 Claims. (Cl. 175—115.)



1. In a device of the character described, the combination with a tubular burner provided upon its upper portion with gas outlet apertures, of a vertically swinging wiper arranged above the tubular burner and having its forward end adapted to contact with the tubular burner and close a selected aperture thereof, said wiper being provided at its opposite end with a stop element, a support, means pivotally connecting such opposite end of the wiper with the support so that the stop element of the wiper may engage with the support and prevent the wiper being moved upwardly to a perpendicular position, a contact element carried by the support and arranged near the said forward end of the wiper and adapted to be directly engaged by the same when the wiper is swung upon its pivot, and a circuit connected with the wiper and the contact element.

1,347,719. FURNACE FOR HEATING METAL ARTICLES AND THE LIKE. WILLIAM HENRY SOUTHORNE, North Shields, England. Filed Dec. 27, 1918. Serial No. 268,518. 1 Claim. (Cl. 263—7.)

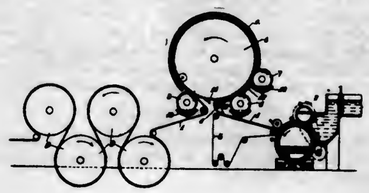
In a furnace for hardening and annealing tools, gages and the like, a furnace chamber formed with an arched roof and concave sides, a removable rotatable table forming the bottom of said chamber, a reduced portion forming the bottom of the table, a circular hole in the bottom of the chamber into which the reduced portion projects, a carrier beneath said table, a shaped recess in the top of said carrier, a similarly shaped projection on the bottom of the reduced portion of the table adapted to engage said recess, means for supporting and rotating said carrier, an opening at one end of said chamber closed by a door, a passage leading from the top of said chamber at the other end through which the products of combustion pass and heating means comprising a Bunsen burner projecting into the top of one of the concave sides of said chamber, for the purposes described.

1,347,720. SLIDING SHOE FOR FURNITURE. FRIEND W. SMITH, Bridgeport, Conn., assignor to The Bassick Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Oct. 2, 1919. Serial No. 327,900. 3 Claims. (Cl. 16—4.)

1. A sliding shoe for furniture, comprising a bowl-shaped body having an annular groove in its inner side wall, a convex cover plate having its peripheral edge portion engaged in the groove and formed centrally with an aperture, and a pintle passed through the aperture and bearing on the bottom of the body.

1,347,721. HAT-BLEACHING COMPOSITION. EMANUEL J. STRATIGOS, Cleveland, Ohio. Filed May 26, 1920. Serial No. 384,362. 3 Claims. (Cl. 8—2.)

1. A hat cleaning composition including zinc oxid, sulfur, gelatin, white glue, and oxalic acid bleaching solution.



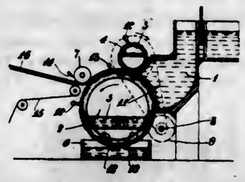
1,347,722. NUT-LOCK. EDWIN E. THOMAS, Portland, Oreg., assignor to Thomas Engineering Works, Portland, Oreg. Filed Dec. 21, 1918. Serial No. 267,842. 3 Claims. (Cl. 151—19.)

3. In combination with a bolt, a collar having an external conical surface, and a nut-like element formed of a series of stave-like sections connected intermediate their ends, and internally threaded at their connecting portion,

the inner ends of said stave-like sections being of conical form, whereby as said nut-like element is screwed on to said bolt, the inner ends of said stave-like sections are expanded and their outer ends moved inwardly into circumferentially locked engagement with said bolt, substantially as shown and described.

1,347,723. PROCESS OF AND MEANS FOR REMOVING WATER FROM THE PULP SHEET IN THE WOOD-PULP AND CELLULOSE MANUFACTURE. RUDOLF ERNST WAGNER, Karlstad, Sweden, assignor to Aktiebolaget Karlstads Mekaniska Verkstad, Karlstad, Sweden. Filed July 19, 1917. Serial No. 181,473. 5 Claims. (Cl. 92—99.)

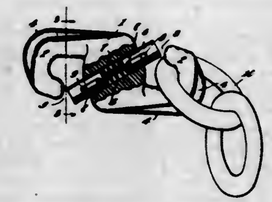
1. In a means for removing water from the pulp sheet in the wood-pulp and cellulose manufacture, the combination of a heated rotary roll for receiving the pulp sheet, and press rolls coöperating with the said heated roll and located at distances from one another and from the points of applying the pulp sheet to and removing the same from the heated roll which distances are increased in the direction of movement of the pulp sheet, each press roll being arranged to be driven with less peripheral speed than the press roll immediately preceding in the direction of movement of the pulp sheet in proportion as the thickness of the pulp sheet becomes decreased during the pressing, substantially as and for the purpose set forth.



2. In a means for removing water from the pulp sheet in the wood-pulp and cellulose manufacture, the combination of a heated rotary roll for receiving the pulp sheet, said roll being provided with projections on its outer surface, and press rolls coöperating with the said heated roll and located at distances from one another and from the points of applying the pulp sheet to and removing the same from the heated roll which distances are increased in the direction of movement of the pulp sheet, substantially as and for the purpose set forth.

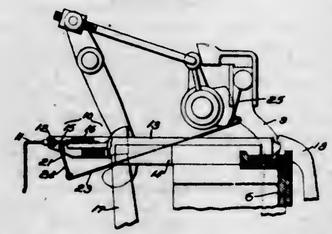
3. In apparatus of the class described, a water extractor, a drying cylinder and a heating drum, means for guiding the sheet of pulp as the same issues from said extractor to and in contact with said heating drum, a pressure roll coöperating with said drum for pressing a substantial portion of the water from said pulp sheet during its passage in contact with said drum, and means for thereafter guiding said sheet to said drying cylinder; the feed of said sheet throughout said apparatus being continuous.

4. In the manufacture of sheet pulp or cellulose, the improved process of expelling therefrom a substantial percentage of water after the issuance of the sheet from the water extractor, which process consists in simultaneously applying heat and pressure to said sheet during the continuous feeding thereof through the combined heating and pressing device.



5. In an apparatus of the class described, a water extractor, a heating drum, means for guiding the sheet of pulp as the same issues from said extractor to and in contact with said heating drum, a pressure roll coöperating with said drum for pressing a substantial portion of the water from said pulp sheet during its passage in contact with said drum, and means for guiding said sheet away from said drum, the feed of said sheet throughout said apparatus being continuous.

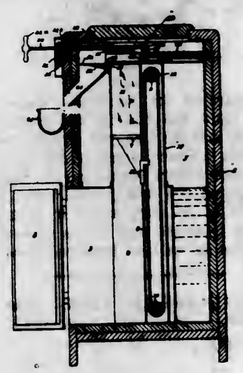
1,347,724. APPARATUS FOR EXTRACTING WATER FROM WOOD-PULP AND THE LIKE. RUDOLF ERNST WAGNER, Karlstad, Sweden, assignor to Aktiebolaget Karlstads Mekaniska Verkstad, Karlstad, Sweden, a Manufacturing Company of Sweden. Filed Jan. 22, 1918. Serial No. 213,216. 2 Claims. (Cl. 92—39.)



1. In an apparatus for extracting water from wood-pulp, cellulose, and the like in wet-machines, so-called drying-machines, and the like, the combination of a number of pulp inlets, a rotary strainer roll for each pulp inlet, and a common rotary strainer roll coöperating with and bearing against the first named rolls, said rolls being located close by the pulp inlets in such manner that the pulp coming from the pulp inlets gathers on the surfaces of the rolls as well as between these surfaces.

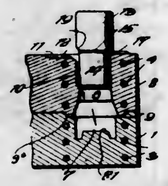
1,347,725. CHAIN-REPAIR LINK. LEO A. WEISS, Cleveland, Ohio. Filed Mar. 30, 1920. Serial No. 369,859. 1 Claim. (Cl. 24—239.)

A repair link comprising a relatively heavy metal block substantially square in cross section and having oppositely presented hooks at opposite ends thereof, the opposite sides of the block projecting beyond the surface planes of the hooks, said block having a diagonal bore through the same, and spring pins working in said bore, toward and from the points of the hooks, and being presented out of alinement with said points, whereby the ends of the pins may be pressed by a link or the like to force the pins inwardly.



1,347,726. FEELER-LOOM. EARLE J. WENTZ, Gaffney, S. C., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed Aug. 14, 1917. Serial No. 186,208. 5 Claims. (Cl. 139—85.)

1. A loom having, in combination, a filling detector mechanism including a filling fork for causing loom stop-

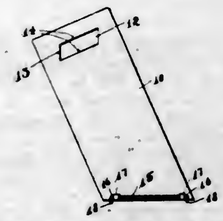


page on the detection of filling absence, a weft replenishing mechanism, means for initiating the weft replenishing operation, and means for tilting the filling fork to render inoperative the filling detector mechanism on the initiation of the weft replenishing operation.

1,347,727. MACHINE FOR DISPENSING ICE-CREAM. FRANK A. WHITE, Cleveland, Ohio, assignor of one-half to Arthur H. Voigt, Cleveland, Ohio. Filed Sept. 2, 1919. Serial No. 321,254. 5 Claims. (Cl. 107—1.)

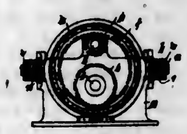
1. In a dispensing machine the combination of an upright chute adapted to hold a body of material, a lifting mechanism in said chute adapted to lift said body to extend a portion thereof beyond the chute, a magazine for containers located beside the chute, means to lift the containers in the magazine to position successively beside the top of the chute, a cutting mechanism working transversely across the top of the chute and adapted to sever a portion of the said body of material, means to advance the portion so severed into the adjacent container, and means to discharge the filled container from the machine.

1,347,728. METHOD AND APPARATUS FOR MOLDING OR CASTING ARTICLES OR INGOTS FROM MOLTEN METAL. EDWIN COOPER WILLS, Frederick, Md. Filed Sept. 2, 1915. Serial No. 48,679. 3 Claims. (Cl. 22—216.)



1. A method of molding or casting metals, which consists in placing the molten metal in a mold and in filling the mold to a higher level than the ultimate dimension of the article desired in one of its axes, and in subjecting the molten mass to pressure prior to its ultimate solidification by an agent having a rigid unyielding compression surface, whose area is equal to that of the surface of the adjacent end of the article, and which engages the said end throughout its entire area, and which, simultaneously with its engagement with the molten metal cuts off the flow of metal to the mold.

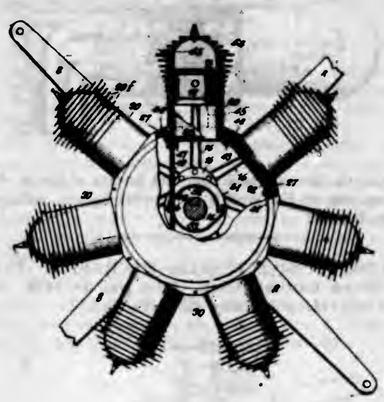
2. A molding machine, comprising upper and lower sections, the sections having coöperating cavities forming molds, and said cavities extending through the upper section, said mold cavities being arranged around a common axis, a central depression in the upper face of the upper section and having grooves leading to the several cavities, each cavity having a groove in its side wall extending from the groove in the upper face of the section to the mold cavity, a plunger fitting each cavity for compressing the molten material in the mold, each plunger having an annular shoulder intermediate its ends for engaging the upper surface of the mold to limit the downward movement of the plunger, and said plungers being of a length to cut off the supply of molten metal to the mold cavity when the shoulder is in engagement with the upper section of the mold cavity.



3. A molding machine having an open mold and a plunger fitting the opening of the mold and adapted to move into the mold and having an area at its lower end equal to the area of the surface of the adjacent end of the article, said mold having a feed passage for the molten metal, the plunger serving as a gate to close the communication between the passage and the mold cavity at the moment when the plunger engages the molten metal.

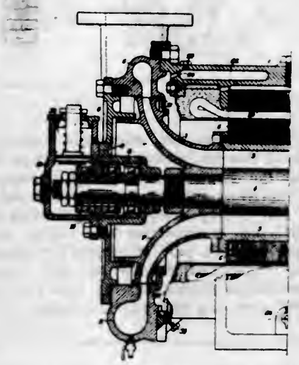
1,347,729. WRITING-RANGER. GEORGE T. WEIDE, Los Angeles, Calif. Filed Dec. 9, 1919. Serial No. 343,596. 8 Claims. (Cl. 35—8.)

1. In a writing ranger of the class described, a body member consisting of a plate having an aperature forming the range within which the writing is to be produced and having means for locating and holding such body with the range in correct position before the writer.



1,347,730. TOOTHED GEARING. JOSEPH ZEITLIN, Fulham, London, England. Filed May 28, 1918. Serial No. 237,123. 3 Claims. (Cl. 74—7.)

1. A toothed gearing consisting of a plurality of pinions, an internally toothed ring embracing and engaging said pinions, a housing for rotatably supporting said ring to enable it to revolve when motion is being transmitted through same to or from one pinion to another, antifriction devices adapted to support said ring in said housing so that the ring can revolve and transmit motion from one pinion to another pinion, the said pinions being rotatably mounted adjacent to and independent of said housing, and means whereby the said housing is relatively movable to said pinions so that the ring and the pinions can be adjusted relatively to one another, substantially as described.

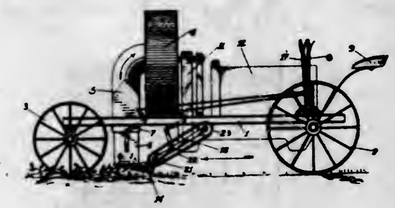


1,347,731. INTERNAL-COMBUSTION ROTARY ENGINE. HAROLD J. CARMODY, Brooklyn Manor, N. Y., assignor of one-half to Joseph A. Faurot, New York, N. Y. Filed Aug. 7, 1918. Serial No. 248,691. 3 Claims. (Cl. 123—44.)

1. In an internal combustion rotary engine the combination of a shaft, an engine body revolubly mounted thereupon and provided with a number of cylinders disposed radially and adapted to turn end over end as said engine body rotates, each cylinder having a wall provided with a compartment, a sleeve carried by each cylinder

and located within the compartment thereof, an annular gear connected to each sleeve in order to turn the same, pinions disposed between the annular gears and engaging the same, and mechanism controllable by rotation of said engine body for turning one of said annular gears.

1,347,732. COMBINED MOTOR-PUMP. THOMAS LANCELOT REED COOPER, London, England. Filed Mar. 25, 1919. Serial No. 284,943. 4 Claims. (Cl. 253—194.)



1. In a combined electric motor and pump, a shaft, a pump impeller mounted on the shaft, a fixed pump volute, a hollow spider mounted on the shaft, and rotor plates mounted on the spider of such diameter that they can be withdrawn together with the shaft through the pump volute.

1,347,733. MACHINE FOR RAISING AND CUTTING POTATO-VINES AND THE LIKE. JAMES F. DAVIS, Atwater, Calif., assignor of one-half to Silas S. Howard, Atwater, Calif. Filed Dec. 1, 1919. Serial No. 341,628. 2 Claims. (Cl. 56—153.)

1. A machine for raising and cutting vines comprising a wheel mounted frame adapted for movement along the ground, a relatively large suction fan mounted on the frame, the intake thereof being positioned adjacent the ground, and a sickle operatively mounted behind the intake with the teeth projecting into the area thereof adjacent its lower edge.

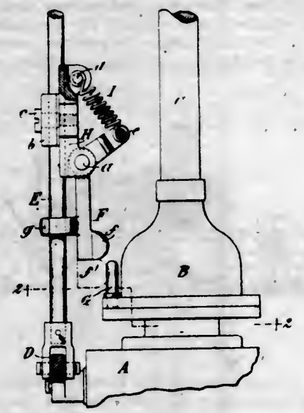
2. A machine for raising and cutting vines comprising a wheel mounted frame adapted for movement along the ground, a relatively large suction fan mounted on the frame, the intake thereof being positioned adjacent the

ground, a sickle operatively mounted behind the intake with the teeth projecting into the area thereof adjacent its lower edge, and means for independently adjusting the horizontal plane of the intake and sickle relative to the ground and to each other.

1,347,734. METHOD OF MAKING EMULSIONS. JUDSON A. DE CREW, New York, N. Y. Filed Dec. 30, 1918. Serial No. 268,965. 4 Claims. (Cl. 87—9.)

1. A method of making emulsions or emulsoids, which consists in forcing an emulsifiable compound into contact with an aqueous solution, the materials being mixed violently under pressure, with any emulsifying apparatus at a temperature of approximately 180° Fahrenheit, and then discharging the emulsions or emulsoid formed into an aqueous solution having a lower temperature.

1,347,735. ELECTRIC-CIRCUIT THERMOSTAT. JOHN H. DERBY and ERNEST S. CLAYTON, New York, N. Y., assignors to American Fire Prevention Bureau, Inc., a Corporation of New York. Filed Dec. 5, 1917. Serial No. 205,524. 11 Claims. (Cl. 200—143.)



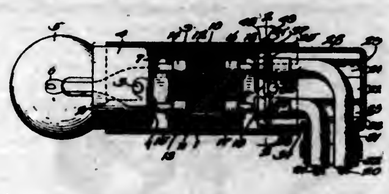
1. In an electric circuit thermostat, comprising a continuous length casing, said casing including within its area side walls and separated conductors for an electric circuit normally insulated from one another by a strip of insulating material having perforations therethrough, a thin flat strip of easily fusible conducting material confined between said side walls and adapted, when fused, to spread through said perforations, and electrically bridge said circuit conductors, said strip of said insulating material and strip of easily fusible conducting material being coextensive with said casing.

1,347,736. BRAKE MECHANISM FOR MOTOR-CARS. WILLIAM DIETER, Brooklyn, N. Y. Filed Jan. 30, 1920. Serial No. 355,212. 7 Claims. (Cl. 116—56.)

1. In a motor car, the combination with a revolving part thereof and a brake, of an alarm device operatively

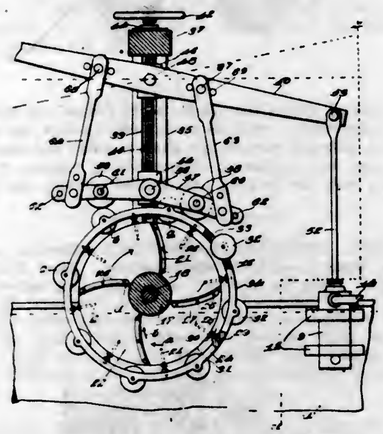
connected with the brake and adapted, when the brake is applied, to be actuated by said revolving part to give an

alarm to the driver when the car is running with the brake applied.



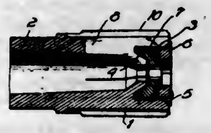
1,347,737. CIRCUIT-CONTINUING DEVICE. HARRY A. DOUGLAS, Bronson, Mich. Filed Aug. 15, 1918. Serial No. 250,024. 2 Claims. (Cl. 240—7.)

1. An incandescent electric lamp structure including a main socket; a supplemental socket at the forward end of the main socket and in separable bayonet projection and channel engagement therewith; an incandescent lamp bulb whose base is in separable bayonet projection and channel engagement with the supplemental socket; and a contact carrier in the main socket having a spring contact pressing forwardly upon a contact upon the lamp bulb base to maintain all of said bayonet projections in engagement with their seats in the bayonet channels, in combination with a circuit extending cord having a plug at one end which is insertible within the forward end of the main socket and carries a contact engageable with a complemental contact upon the carrier in the main socket, said cord having a socket at its other end formed to have separable bayonet projection and channel engagement with the supplemental socket, this socket upon the cord having a contact carrier provided with a spring contact pressing forwardly and adapted to engage a complemental contact upon the lamp base that is within the supplemental socket.



1,347,738. CURRENT-CARRYING PLUG. HARRY A. DOUGLAS, Bronson, Mich. Original application filed Feb. 4, 1918, Serial No. 215,330. Divided and this application filed Oct. 14, 1918. Serial No. 258,065. 1 Claim. (Cl. 173—361.)

A current carrying plug having a bore extending thereinto laterally and toward one end of the plug, in combination with a conductor extending into the plug through said bore, a sheath for the plug provided with a longitudinal slot through which the conductor is passed, and a ferrule surrounding said conductor and projecting into

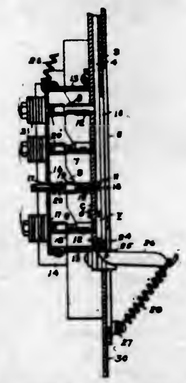


the sheath through said slot and having a flange within the interior of the sheath to prevent lateral withdrawal of the ferrule.

1,347,739. PUMP-ACTUATING MECHANISM. FRANCIS J. EVANS, Burbank, Wash. Filed May 31, 1919. Serial No. 301,128. 8 Claims. (Cl. 103—69.)

1. In a floating pumping apparatus, barges rigidly united in spaced relation, means extending from the shore for sustaining the barges in the current, a pump driving water wheel rotatively supported on and disposed between said barges and having heads, beam-actuating disks or wheels peripherally mounted on said heads, a walking beam for each barge, a pair of pumps for operation by each walking beam and carried by said barges, and wheeled transmission means coacting with the wheels on said heads for actuating said walking beams.

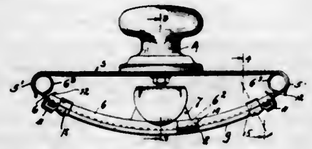
1,347,740. REAMER. FRANK W. HACK, Chicago, Ill. Filed Dec. 6, 1918. Serial No. 265,539. 2 Claims. (Cl. 77—75.)



2. A tool of the class described having a hollow cylindrical body portion and a shank or tang at one end of the body portion, said body portion being provided with integral cutting edges, slits extending between the cutting edges from the free end of the body portion toward the shank, said body portion being provided with a conical

projection and an oppositely disposed conical seat at its slotted end, and a pair of coacting complementary conical surfaced members having threaded engagement with said body portion and independently rotatable, whereby the turning of said members will effect the expansion and contraction of said tool as desired.

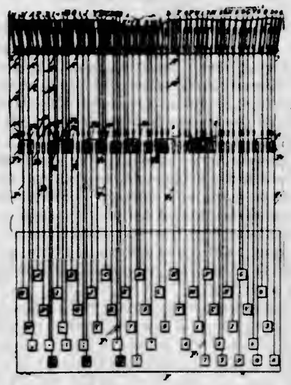
1,347,741. MANUFACTURE OF STEEL. ROBERT ABBOTT HADFIELD, Westminster, England. Filed Aug. 10, 1917. Serial No. 185,523. Renewed May 27, 1920. Serial No. 384,726. 12 Claims. (Cl. 75—45.)



1. The manufacture of steel containing from about decimal three of one per cent, to one per cent. and upward of carbon and practically free from or low in manganese consisting in decarburizing, desiliconizing and demanganizing a molten charge of iron to the desired degree and deoxidizing the resulting product by a light deoxidizing agent.

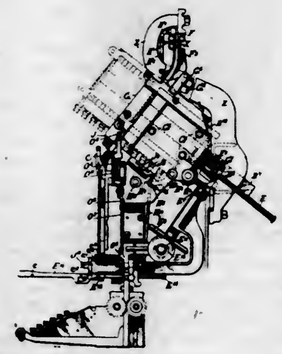
1,347,742. COIN-OPERATED MECHANISM. EDWARD H. HELT, Bellevue borough, Pa. Filed Nov. 4, 1919. Serial No. 335,577. 11 Claims. (Cl. 194—92.)

1. In a coin operated mechanism adapted to be operated with different numbers of coins, the combination of a fixed member, an actuating member provided with a longitudinally disposed coin slot into which the coins are dropped one after the other and mounted to reciprocate in relation to said fixed member, a plurality of locking means moving with said actuating member and individually adapted to engage a portion of said fixed member to prevent actuating movement of said actuating member, means for rendering said locking means individually inactive, and means whereby the active locking means are temporarily rendered inoperative by the insertion of the proper number of coins in said coin slot, thereby permitting the actuating movement of said actuating member.



1,347,743. DUPLICATOR. OSCAR HIDALGO, Valparaiso, Chile. Filed Oct. 10, 1919. Serial No. 329,773. 6 Claims. (Cl. 101—125.)

1. In a duplicator, a presser plate having a hook-shaped grasp.



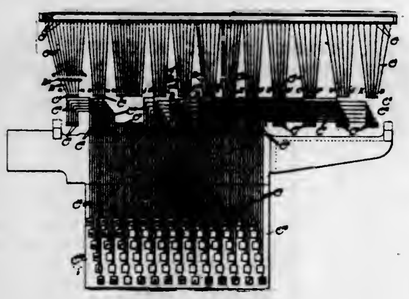
6. In a duplicator, a presser plate, provided with end notches, a stencil sheet adapted to be removably placed on the outer face of said presser plate, and band shaped clasps, one for each end of said presser plate, each clasp having a hook shaped portion adapted to pivotally engage the corresponding notch in said presser plate and to snap over the opposite edge of the said presser plate.

1,347,744. TYPOGRAPHICAL MACHINE. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Aug. 16, 1916. Serial No. 115,151. 20 Claims. (Cl. 199—18.)

20. In a typographical machine, the combination of a magazine containing a series of matrix columns including single or unduplicated columns of matrices bearing the same character, a bank of escapements controlling the release of the matrices from the magazine, and a keyboard mechanism operatively connected to the escapements and including indirect connections between some of the finger keys and their corresponding escapements, the said indirect connections being extended to the escapements for single or unduplicated columns of matrices.

1,347,745. TYPOGRAPHICAL MACHINE. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Nov. 30, 1917. Serial No. 204,534. 49 Claims. (Cl. 199—16.)

1. In a typographical machine, the combination with a plurality of magazines and a shift frame therefor, of power-operated mechanism for moving the shift frame to bring any selected magazine into operation, the said mech-

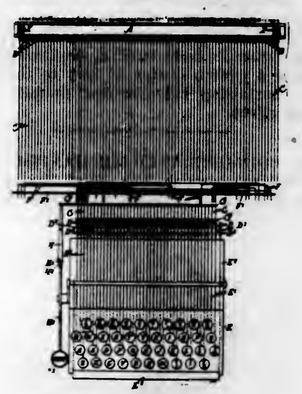


anism including a pair of screw rods loosely connected to the shift frame at opposite sides thereof, rotating sleeves or nuts threaded to the screw rods and having gears fixed thereto, a transverse rotary shaft provided with driving gears meshing with the sleeve gears and further with a driven gear, a fore-and-aft shaft provided at its rear end with a driving gear meshing with the driven gear of the transverse shaft and at its forward end with a driven gear, a constantly rotating shaft provided with two loosely mounted driving gears engaging the driven gear of the fore-and-aft shaft on opposite sides and with a clutch member movable into engagement with one or the other of said driving gears, and a hand lever controlling the movements of the clutch member.

15. In a typographical machine, the combination of a plurality of magazines each provided with a movable matrix locking device, power-operated mechanism for shifting the magazines to bring any selected one thereof into operation, and means to prevent the operation of said mechanism until the matrix locking device of the operative magazine has been moved to active position.

22. In a typographical machine, the combination of a plurality of shiftable magazines, mechanism for shifting the magazines to bring any selected one into operation, a matrix locking plate carried by each magazine and movable laterally thereof in opposite directions to active or inactive position, and means for moving the locking plate of the operative magazine to active position before the magazines are shifted.

43. In a typographical machine, the combination of a magazine provided with a matrix locking device movable at will to active position, a matrix feeler movable across the end of the magazine, and means adapted when operated to effect first the movement of the matrix feeler and then the movement of the matrix locking device.



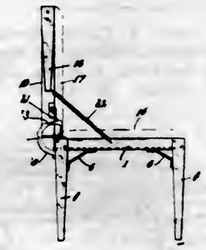
1,347,746. TYPOGRAPHICAL MACHINE. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Original application filed Nov. 30, 1917, Serial No. 204,534. Divided and this application filed Mar. 29, 1919. Serial No. 286,221. 18 Claims. (Cl. 199—18.)

1. In a typographical machine, the combination of a keyboard comprising finger keys, a magazine of materially greater width at its discharge end than that of the keyboard, matrix releasing escapements associated with the magazine, actuating reeds connected to the escapements and some removed laterally from their corresponding finger keys, and offset connections between the latter keys and the remote escapement actuating reeds.

11. In a typographical machine, the combination of a channeled matrix magazine having single channels for most of the matrices and duplicate channels for those more frequently used, a bank of escapements controlling the release of the matrices from the magazine, and a keyboard mechanism operatively connected to the escapements and including indirect connections between some of the finger keys and their corresponding escapements, the said indirect connections being extended to the escapements for both the single magazine channels and the duplicate magazine channels.

1,347,747. TYPOGRAPHICAL MACHINE. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Aug. 23, 1917, Serial No. 187,730. Renewed Jan. 27, 1920. Serial No. 354,513. 17 Claims. (Cl. 199—18.)

1. In a typographical machine, the combination of a channeled magazine containing a font or set of matrices divided into groups, a bank of escapements controlling the release of the matrices from the magazine, a series of escapement actuating reeds divided into groups corresponding to the group arrangement of the matrices in the magazine, the corresponding reeds in the respective groups being located remotely from each other, a keyboard, and mechanical devices whereby the keyboard as a whole may be connected to one or another of the groups of escapement actuating reeds to effect the release of matrices of the corresponding group from the magazine.



3. A structure as specified in claim 1, characterized by the fact that at its discharge end the magazine is of materially greater width that that of the keyboard.

12. In a typographical machine, the combination of a channeled matrix magazine having escapements, a series of escapement actuating reeds divided into groups, a single group of key-controlled operating rods or sections, sets of intermediate connecting bails engaged at one end with the escapement reeds of the respective groups and having their opposite ends disposed side by side adjacent the group of operating rods, and means for shifting the operating rods laterally into engaging relation to any selected set of bails.

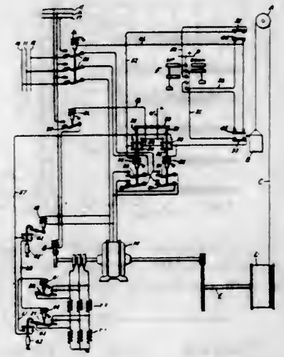
13. A structure as specified in claim 10, in combination with a shift key to control the connection of the operating rods with the desired group of escapement actuating reeds.

1,347,748. COMBINATION BED AND CHAIR, DMYTRO LYTWYNEC, Hafford, Saskatchewan, Canada. Filed Dec. 11, 1919. Serial No. 344,086. 1 Claim. (Cl. 155—45.)

A combination chair and couch comprising a seat element, a back element hinged to said seat element, legs adjustably carried by the free end of said seat element, a keeper bar secured upon said seat element and curved concentrically to the hinge axis of the back element, a bolt carried by the back element, said keeper bar presenting an elongated recess in which said bolt engages to retain the back element in raised position with a limited back and forward movement, and a pair of spiral tension

springs connected at opposite ends to the seat and back elements and normally acting to swing the back element forwardly.

1,347,749. EXTINGUISHING ATTACHMENT FOR LAMP-BURNERS. ANTON MEDWATZ, Allentown, Pa. Filed Dec. 27, 1919. Serial No. 347,815. 2 Claims. (Cl. 67—78.)



1. In a combined lamp dimmer and extinguisher, a lever support, a lever pivotally mounted on said support, a wide end on said lever having an opening therein, a loop formed from the other end of said lever, and a hinged section on the wide end of said lever arranged for swinging to cover and uncover said opening.

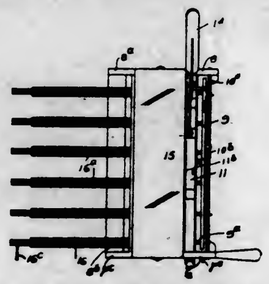
1,347,750. METHOD OF ASSORTING BRISTLES. JOHN MORRISON, Jr., Glens Falls, N. Y. Filed Dec. 3, 1918. Serial No. 265,175. 2 Claims. (Cl. 15—45.)

1. The method herein described of assorting bristles, which consists in arranging a plurality of needle bars with their needles crossing each other so as to form voids, showering bristles upon said needles and guiding said bristles between said needles in order to arrange said bristles with their lengths extending in a common direction and their butt ends extending in a single direction, removing some of the needle bars in succession so as to draw out the needles and leave the ends of the bristles protruding, grasping said ends by hand, pulling upon them so as to disengage them from the mass of bristles and finally tying the bristles thus extracted into bundles of convenient size.

1,347,751. CONTROL OF INDUCTION-MOTORS. ROBERT H. MCLAIN, Schnectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 21, 1917. Serial No. 203,245. 6 Claims. (Cl. 172—152.)

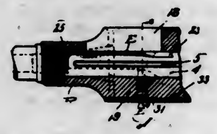
1. The combination with an induction motor, of a plurality of sources of electrical supply, each having a different frequency, the voltages of the sources being in substantially the same ratio as their frequencies, line switches for making and breaking the motor connections to any one of said sources for both directions of rotation, a switch for shifting the motor connections from one source to another said shifting switch being biased for normally making connections with the low frequency source and means for closing said line switches to start said motor at low speed and for throwing said shifting switch to accelerate said motor to a higher speed.

1,347,752. WINDSHIELD FOR AUTOMOBILES. SAMUEL J. MENEELY, Newburgh, N. Y. Filed Nov. 12, 1919. Serial No. 337,463. 6 Claims. (Cl. 296—96.)



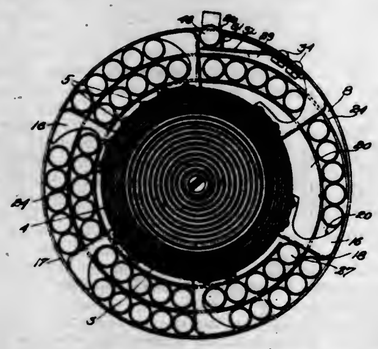
6. In a wind shield for vehicles, the combination of vertically disposed standards, a main frame located adjacent to said standards and supported pivotally at its lower edge, adjustable securing devices for holding said frame in different positions with respect to said standards, and a plurality of transparent panels pivotally mounted in said main frame upon horizontal pivots, and adjustable thereon with respect to each other and the main frame, a hood having a horizontal portion and downwardly extending substantially triangular lateral portions, and detachable means for securing said hood to the main frame, the said standards, and the forward edge of the top of the vehicle.

1,347,753. MACHINE-GUN. LIDO J. PATRICK, San Diego, Calif. Filed Aug. 23, 1917. Serial No. 187,810. 5 Claims. (Cl. 89—13.)



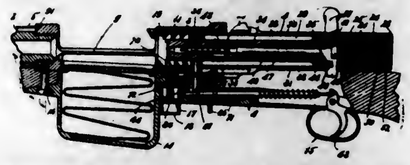
1. A machine gun including, a series of barrels arranged in a horizontal row, a cartridge retainer revolubly mounted contiguous to the breech end of each of said barrels, a manually operated endwise and downwardly shiftable bar provided with a plurality of extending

lugs for engaging said retainers in its movement for revolving said retainers simultaneously a one-quarter



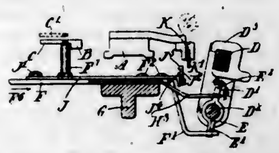
revolution and a magazine mounted over said cartridge retainer adapted to deliver cartridges to each of said retainers with each one-quarter revolution.

1,347,754. **FIREARM.** OSCAR V. PAYNE, Cleveland, Ohio, assignor to Auto-Ordnance Corporation, New York, N. Y., a Corporation of New York. Filed May 15, 1919. Serial No. 297,284. 5 Claims. (Cl. 42—25.)



2. A firearm comprising a breech bolt having an elongate recess extending from the forward end of the bolt longitudinally along one side thereof and having a dovetail groove extending transversely of said recess at a distance from the end of the bolt, and an elongate extractor adapted to lie in said recess and having a transverse dovetail gib adapted to slide into said dovetail groove, the bolt and extractor having shoulders arranged to prevent said gib from slipping out of said groove, and the extractor being sufficiently flexible to permit it to be sprung outwardly until said shoulders clear each other, thereby to permit said gib to be slipped out of said groove.

1,347,755. CARTRIDGE-MAGAZINE. OSCAR V. PAYNE, Cleveland, Ohio, assignor to Auto-Ordnance Corporation, New York, N. Y., a Corporation of New York. Filed May 15, 1919. Serial No. 297,285. 19 Claims. (Cl. 42—19.)

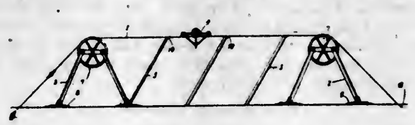


1. A cartridge magazine comprising a substantially circular casing having a delivery opening at the periphery thereof, means for advancing cartridges circumferentially toward said opening, and other means for propelling the cartridges radially to said opening.

1,347,756. **GUN.** OSCAR V. PAYNE, Cleveland, Ohio, assignor to Auto-Ordnance Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 24, 1920. Serial No. 353,704. 21 Claims. (Cl. 42—3.)

1. A gun comprising a receiver, a breech closure movably disposed in the receiver to reciprocate rearwardly and forwardly and to rotate at the forward end of its stroke into locked position, the receiver and closure having locking abutments arranged to interengage when the closure rotates into locked position, and having an interfitting lug and guideway to guide the closure, the locking abutments being inclined to the line of breech pressure at such angles as to hold the bolt closed at high breech pressure and to slide relatively to each other when the pressure drops to a low value automatically to unlock the closure, the guideway having a longitudinal portion and a transverse portion tangentially connecting with the longitudinal portion throughout a gradual and uninterrupted bend so that the rotation of the closure into and out of locked position blends with its reciprocation smoothly and without impact, and the lug and guideway being coördinated with the locking abutments so that the abutments are guided into and out of locking engagement throughout a smoothly curving path.

1,347,757. TABULATOR MECHANISM FOR TYPE-WRITING-MACHINES. ERIC JULIUS PILBLAD and ARTHUR TOMLINSON, Leicester, England, assignors to Imperial Typewriting Company Limited, Leicester, England. Filed July 8, 1919. Serial No. 309,460. 13 Claims. (Cl. 197—176.)

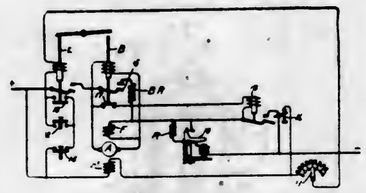


1. In a tabulating mechanism for a typewriting machine, the combination with a spring-controlled support having one or more tabulator-stops for the carriage, which support is movable in an endwise direction under its spring-control parallel with that of the carriage and also in a direction transverse thereto, and a tabulator key-lever operatively connected with said support and arranged to move to and fro in the said transverse direction, of a catch arranged to directly engage and hold the said key-lever in the position into which it is moved in releasing the carriage escapement, and tripping means arranged to operatively connect the said support with the catch and to trip the catch during the endwise movement of the support at the end of the movement of the carriage in a direction toward a tabulator stop.

1,347,758. CABLEWAY. HARRY DE COURCY RICHARDS, San Francisco, Calif. Filed Sept. 26, 1917. Serial No. 193,274. 8 Claims. (Cl. 104—126.)

1. In a portable cableway, the combination with a cable of adjustable end supports therefor, inclined stanchions

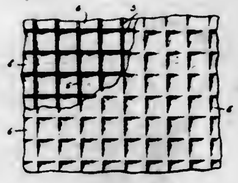
intermediate said end supports and located at one side of the cable, members formed at the ends of said stanchions to receive the cable, means for bracing said inclined



stanchions, anchors for said cable, means for tensioning the cable between said anchors to enable trolleys or carriers to traverse said cable.

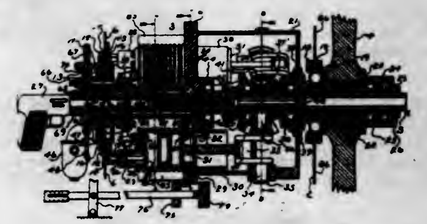
1,347,759. **BUTTON-FASTENER.** RUBY ROOT, San Diego, Calif. Filed Apr. 28, 1919. Serial No. 293,316. 3 Claims. (Cl. 24—103.)

1. In a device of the class described, the combination with a conventional button with an extended lug, of a disk member, a spring member provided with an offset therein adapted to engage the lug of the button and rigidly secured to one side of said disk member and an interlocking latch secured to the opposite side of said disk member for receiving the end of said spring member.



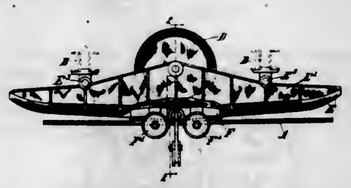
1,347,760. MOTOR-CONTROL SYSTEM. CLAUDE C. RUNNER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 14, 1918. Serial No. 222,413. 5 Claims. (Cl. 172—288.)

1. A control system for electric motors comprising a starting resistance, an electromagnetic switch energized by the motor current to cut out the resistance when the motor current drops to a predetermined value and means controlled by the speed of the motor and independent of the motor current for cutting out the resistance when the motor current is below a value at which the electromagnetic switch will close.



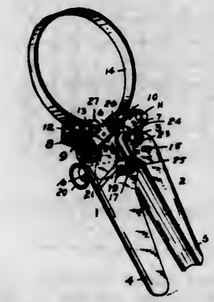
1,347,761. PICTURE-SCREEN. JAMES M. SHAY, Buffalo, N. Y., assignor, by direct and mesne assignments, to Steel Velour Screen Corporation, Buffalo, N. Y., a Corporation of New York. Filed May 7, 1919. Serial No. 295,343. 3 Claims. (Cl. 88—24.)

1. A picture screen comprising a body provided with interstices, a sheet of fabric pressed into contact with the body so closely that there are formed on the surface of the fabric slight depressions corresponding to the



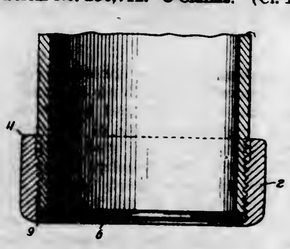
interstices of the body, and means uniting the body and the fabric together.

1,347,762. **HYDROCARBON-ENGINE.** WILBUR L. SHEPARD, Elmwood, Conn., assignor to The World Gas Engine Company, Hartford, Conn., a Corporation of Maine. Filed Sept. 19, 1917. Serial No. 192,062. 2 Claims. (Cl. 121—62.)



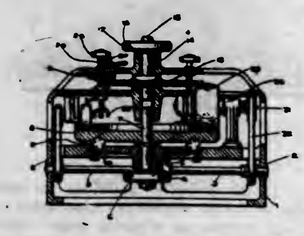
1. The combination of a hollow carrier, cylinders individually removably fitted in an end wall of the carrier, projecting from said end wall and extending into the carrier, the longitudinal axes of the cylinders being in parallelism with each other and with the longitudinal axis of the carrier, the cylinders being disposed approximately equal distances apart, pistons slidable in said cylinders, rods jointed to the respective pistons within said carrier, cranks to which the rods are respectively connected, the cranks being disposed in said carrier and the rods also extending thereinto, means in the carrier for receiving the effect of the respective cranks, means for causing the reciprocation of the pistons in their respective cylinders and arcuate fan blades fitted against the carrier, engaging each outer end portion of the cylinders and spaced respectively from each other.

1,347,763. AERIAL ROPEWAY. HERBERT FREDERICK HENRY SHIELDS, Welling, and JOHN PEARCE ROE, London, England, assignors to Ropeways Limited, London, England. Filed Aug. 21, 1919. Serial No. 319,012. 24 Claims. (Cl. 104—115.)



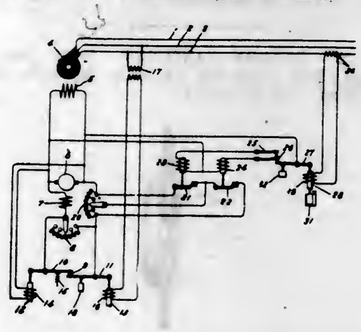
1. A device of the character described for coöperation with boxheads of aerial ropeways, comprising a depression-sheave, and guides on opposite sides thereof, said guides having a length greater than the length of a single boxhead, substantially as described.

1,347,764. ADJUSTABLE GRIPPING-TOOL. WILLIAM W. SHIRLEY, Pittsburgh, Pa. Filed Mar. 5, 1920. Serial No. 363,620. 9 Claims. (Cl. 81—3.)



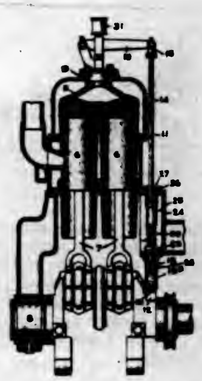
8. In a tool, a pair of crossed levers, a pivot connecting the levers between their ends, the levers having jaw members at one side of the pivot, and handle members at the other side therof, a looped flexible member having one terminal portion passed over the jaw member of one lever and secured to the other lever on that side of the pivot where the handle members are.

1,347,765. THREAD-PROTECTOR AND METHOD OF MAKING SAME. PETER J. SHRUM, Monaca Heights, Pa., assignor to Colona Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 20, 1918. Serial No. 250,712. 3 Claims. (Cl. 137—91.)



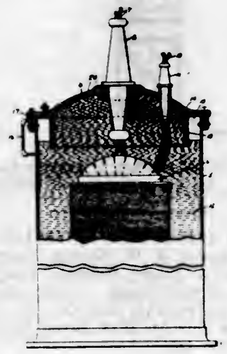
1. The method of manufacturing thread protectors consisting in reaming a threaded blank to provide a receiving seat adjoining the base of the endmost thread, then inserting a retaining ring within the receiving seat with a portion of its body portion extending inwardly beyond the threads providing an annular abutment, and then swaging over the end portion of the blank into retaining engagement with the ring.

1,347,766. LENS-GRINDER. EDGAR D. TILLYER and LUCIAN W. BUOBEE, Southbridge, Mass., assignors to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Nov. 30, 1917. Serial No. 204,666. 1 Claim. (Cl. 51—131.)



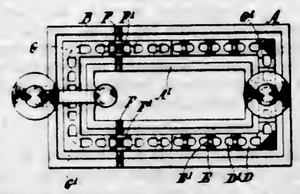
A lens grinding machine, including a frame, a rotating table bearing an annular grinding tool, said tool having a main spherical transverse curve and a supplemental transverse portion of different curve, a main drive gear carried by the frame, a plurality of spindles having pinions at their upper ends to mesh with the drive gear, and a plurality of lenses at their lower ends for engagement with the tool, whereby a pair of surfaces of different foci will be formed on each of the lenses, and means for independently shifting the spindles to move their pinions out of mesh with the main drive gear.

1,347,767. OVERLOAD-RELAY. EUGENE E. VALK, Los Angeles, Calif., assignor to General Electric Company, a Corporation of New York. Filed Nov. 21, 1917. Serial No. 203,065. 6 Claims. (Cl. 171—229.)



1. The combination with an electrical distribution system, of a generator for supplying current thereto, means for exciting said generator, means responsive to an abnormal electrical condition of said generator for decreasing the excitation of said generator, and means for automatically restoring said excitation in a plurality of steps during an appreciable time interval after said electrical condition becomes normal.

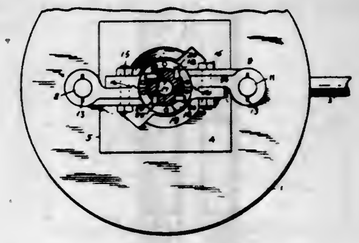
1,347,768. INTERNAL-COMBUSTION ENGINE. WILLIAM EVERETT VER PLANCK, Erie, Pa., assignor to General Electric Company, a Corporation of New York. Filed Nov. 9, 1918. Serial No. 261,761. 3 Claims. (Cl. 123—90.)



1. In an internal combustion engine, a push rod comprising two members, one of which has a longitudinally split end with a tapered counter-bore, means for connecting the two members together comprising a taper plug which fits into said counterbore and has projections which are fastened to said two members, and a stop nut which screws over said split end.

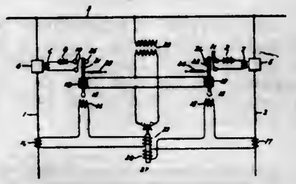
1,347,769. CASING FOR ELECTRCAL APPARATUS. JAMES WILKINSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 29, 1917. Serial No. 199,089. 7 Claims. (Cl. 175—361.)

1. In an electrical apparatus, the combination with an inclosure having therein windings surrounded by liquid insulating material, of bushings having leads for said windings passing through the top of said inclosure and means for providing a region of homogeneous insulating material about the entire portion of said bushings and leads within said inclosure, and a sustaining body of gas in an adjacent region.



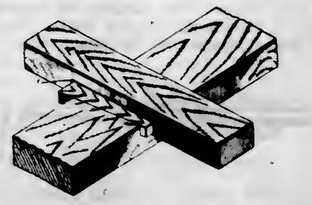
1,347,770. ACCUMULATOR ELECTRODE-GRID. SIGMUND WILLNER, London, England, assignor to William Dederich, London, England. Filed Sept. 4, 1918. Serial No. 252,629. 9 Claims. (Cl. 204—29.)

8. An accumulator having a plurality of grids nested within each other, the four walls of one grid being built up of a plurality of vertical and horizontal bars, to form vertical and horizontal rows and spaces, there being perforations through the bars to form communicating openings between adjacent spaces, and means for supporting one of the grids on the other grids substantially as described.



1,347,771. ROTARY DRILLING-MACHINE. CLYDE S. WRIGHT, Toledo, Ohio, assignor to The National Supply Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 3, 1919. Serial No. 335,386. 4 Claims. (Cl. 255—23.)

1. In a well-drilling machine, provided with a rotary table having a central opening, and a drill-stem reciprocable in the opening and having external longitudinal grooves, the combination of a driver having an opening with a groove corresponding to each of the drill-stem grooves, a separate and distinct insert in each pair of

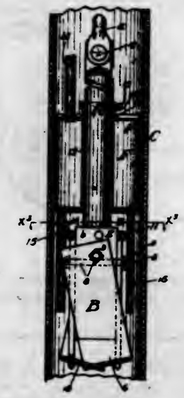


corresponding grooves, means preventing travel of the inserts in the driver, and means connecting the driver to the table.

1,347,772. PROTECTIVE MEANS FOR SYSTEMS OF DISTRIBUTION. DAVID BASCH, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 12, 1917. Serial No. 190,897. 8 Claims. (Cl. 175—294.)

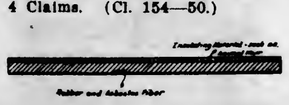
1. The combination with two parallel feeders, reverse power relays associated with each feeder having current and potential elements effectively coöperating on conditions of reversal accompanied by low voltage, and means for holding said relays inoperative until a relative reversal of power occurs on said feeders.

1,347,773. KEY-ANCHOR. WILLIAM S. BRUMMETT and EDWARD C. REED, Pawhuska, Okla. Filed Nov. 28, 1919. Serial No. 341,077. 2 Claims. (Cl. 20—92.)



1. A device of the character described, comprising a plate having openings with oppositely extending burs at diametrically opposite sides of said openings, said plate also having other plain openings, in the even surface thereof, without burs at their margins.

1,347,774. DRILLING-BIT. THOMAS C. BUDDINGTON, Pasadena, Calif., assignor of one-half to Samuel G. Elam, Pasadena, Calif. Filed May 22, 1919. Serial No. 298,978. 3 Claims. (Cl. 255—76.)



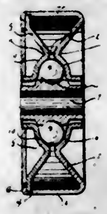
1. A bit, comprising a bit stock provided with a cutter eccentrically suspended from the bit stock and thus having

an inherent tendency to project laterally into drilling position; in combination with liquid circulation means

comprising a casing, means for connecting the casing with the bit stock, and a liquid supply pipe extending to the casing; said casing being adjustably mounted.

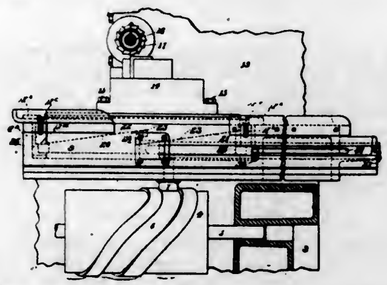
1,347,775. INSULATING, WATERPROOF SOLE FOR USE ON BOOTS AND SHOES. HARRY M. BURR, Middletown, and GEORGE J. INGRAHAM, West Hartford, Conn., assignors to The Omo Mfg. Co., Middletown, Conn., a Corporation. Filed July 2, 1919. Serial No. 308,160. 4 Claims. (Cl. 154—50.)

1. As a new article of manufacture, an insulating waterproof sole for boots and shoes, comprising a lower or wearing portion and an upper or insulating portion, these portions being separately fabricated and united, and the lower portion containing rubber and asbestos fiber which latter is arranged transversely, or substantially transversely, to the axis of the sole, and the upper portion containing a component of insulating material.



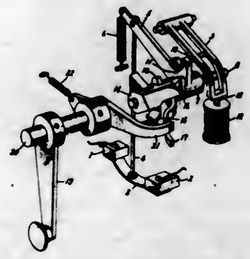
1,347,776. ELECTRODE-HOLDER. RALPH H. CHADWICK, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Sept. 23, 1919. Serial No. 325,648. 4 Claims. (Cl. 219—8.)

1. An electrode holder, comprising a sleeve member provided with a shank, an insulating member adapted to receive a portion of said shank, said portion being formed to receive an electric cable to be electrically connected with said shank portion within said insulating member, and unitary means for uniting in operative relation said insulating member, said shank and said cable.



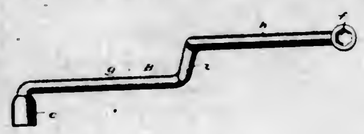
1,347,777. ROLLER-SKATE WHEEL. HARRY A. HANNUM, Springfield, Mass., assignor to Winchester Repeating Arms Co., New Haven, Conn., a Corporation. Filed Mar. 17, 1920. Serial No. 366,479. 2 Claims. (Cl. 46—52.)

1. A ball-bearing roller-skate wheel of the inclosed type, the said wheel consisting in a hub, and two plates inwardly struck up to form ball-cups and secured together in spaced relation, whereby their oppositely located high



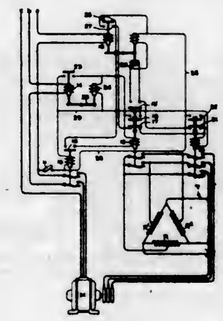
points are kept out of contact to provide for correction after assemblance, for the prevention of wabbling.

1,347,778. DROP-TABLE MECHANISM FOR MILLING-MACHINES. BENGT M. W. HANSON, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Continuation of application Serial No. 869,216, filed Oct. 29, 1914. This application filed July 31, 1918, Serial No. 247,638. 7 Claims. (Cl. 90—58.)



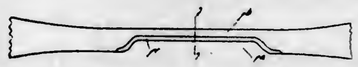
1. In a milling machine the combination of a bed having horizontal ways, a unitary box-like reciprocating slide having a thin bottom wall directly engaging the ways on the bed and having its chamber closed on all sides and open at the top, a vertically movable horizontal work support positioned across the top of the chamber, means for reciprocating the slide, and means in the bottom of the chamber in immediate proximity to the ways for moving the work support upward or downward at predetermined points in the reciprocation of the slide.

1,347,779. ELECTRIC SWITCH. ERNEST H. JACOBS, Chicago, Ill., assignor to General Electric Company, a Corporation of New York. Filed July 30, 1917. Serial No. 183,436. 2 Claims. (Cl. 200—109.)



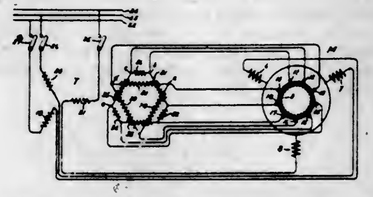
1. An electric switch comprising fixed and movable contacts, an actuating arm for controlling said movable contact, a latching member biased to engage said arm and restrain it in switch closing position, an independent tripping member movable to engage said latching member and move it to releasing position, an independent resetting member for moving said actuating arm from switch opening to switch closing position, and an independently mounted operating arm intermediate said tripping and resetting members and movable to engage either of said members but biased free of both said members.

1,347,780. WRENCH. RAYMOND E. JACOBY, Philadelphia, Pa. Filed July 16, 1919. Serial No. 311,320. 4 Claims. (Cl. 81—177.)



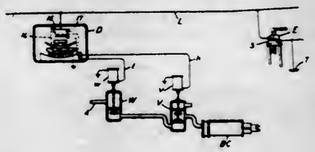
2. A wrench whose shank is composed of straight, parallel sections which are connected by a crank and are relatively offset in two different directions on opposite sides of said crank, and wrench sockets carried by the respective sections.

1,347,781. CONTROL OF ELECTRIC MOTORS. BENJAMIN W. JONES, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 20, 1918. Serial No. 235,437. 14 Claims. (Cl. 172—274.)



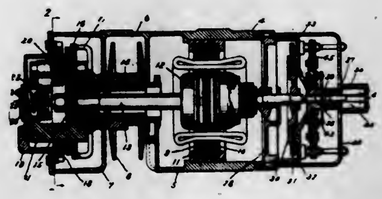
3. The combination with a three-phase motor and resistance sections having a delta connection thereto of means for connecting an intermediate point of each of said sections to an intermediate point of each of the other sections to reduce the resistance in the motor circuit.

1,347,782. NECKTIE. JOSEPH KAISER, San Diego, Calif., assignor to Carlotta G. Kaiser, San Diego, Calif. Filed Aug. 8, 1918. Serial No. 248,830. 2 Claims. (Cl. 2—11.)



1. A necktie having the upper marginal portion intact from end to end, the lower marginal portion being cut out at the central portion of the tie for a length and height permitting the necktie to avoid contact with the collar button in application and tying adjustment of such tie.

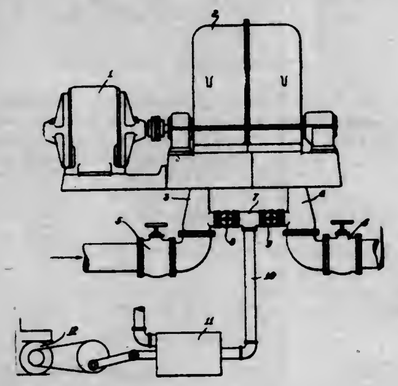
1,347,783. ALTERNATING-CURRENT MOTOR. WILLEM C. KORTHALS-ALTES, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 30, 1918. Serial No. 231,597. 3 Claims. (Cl. 172—281.)



2. The combination with a three-phase alternating current motor having stator windings, a commutated rotor winding and coöperating brushes; of a transformer having phase multiplying secondary windings arranged in two mesh connected groups, one group having three windings and the other six, the ratio of alternate large and small windings in the six winding groups being substantially as two to one and the ratio between each winding of the three winding group and a small winding of the six winding group being substantially as two and one-half to one, said secondary windings having nine terminals which are connected in series with said brushes.

1,347,784. AUTOMATIC DECELERATING DEVICE. JOHN F. LAYNG, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 24, 1917. Serial No. 157,251. 20 Claims. (Cl. 303—21.)

1. In an automatic decelerating device for a vehicle, means for retarding the movement of said vehicle and a governor provided with compensating means for offsetting the effects of grade for controlling the rate of retardation of said vehicle.

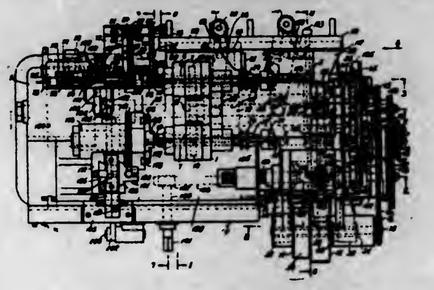


1,347,785. ELECTRIC HOIST. SAM H. LIBBY, East Orange, N. J., assignor to General Electric Company, a Corporation of New York. Filed Sept. 13, 1917. Serial No. 191,120. 1 Claim. (Cl. 254—168.)

An electric hoist comprising a casing, an electric motor therein having its armature longitudinally movable and spring pressed in one direction, a friction member secured to the armature shaft and coöperating with a stationary member to form a brake, reduction gearing at one end of said casing, a hoisting drum between the motor and the reduction gearing and driven thereby, a controller

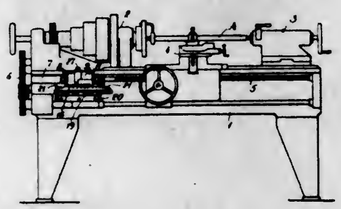
secured to the opposite end of the casing, and means whereby the movement of the controller handle shifts the armature shaft against the spring pressure to release the brake.

1,347,786. STARTING MEANS FOR MOTOR-DRIVEN COMPRESSOR INSTALLATIONS. FREDERICK V. D. LONGACRE, Yonkers, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 23, 1919. Serial No. 292,017. 3 Claims. (Cl. 230—11.)



1. The combination of a synchronous motor, a centrifugal compressor coupled directly thereto, and independent means for producing and maintaining a vacuum throughout the interior of said centrifugal compressor until said synchronous motor has been brought up to speed.

1,347,787. RECORDING MECHANISM. HAROLD H. MAPELSDEN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 24, 1919. Serial No. 284,658. 8 Claims. (Cl. 234—1.)



5. In an apparatus of the character described, a chart, a pen arm which extends substantially parallel to the chart and is pivoted at one end in a plane parallel to the chart, said pen arm being adapted to turn on said pivot to move its other end toward and away from the chart, a pen holder pivoted on the other end of said pen arm and hanging alongside the pen arm, and a pen carried by the pen holder and adapted to rest by gravity aginst the chart.

1,347,788. THREADING-MACHINE. FRIEDERICH MCLLER, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 15, 1918. Serial No. 217,321. 27 Claims. (Cl. 10—91.)

1. The combination of a rotatable turret head, rotatable blank-carrying spindles mounted in the turret head, means for indexing the head to bring the spindles respectively to predetermined stations, cutting tools adapted to engage blanks carried by the spindles, a magazine mechanism comprising runways having a side wall inclined at 45° and a bottom wall oppositely inclined at 45° whereby the lowermost blank, regardless of diameter, is held with its axis in a fixed vertical plane which includes the spindle axis at one station, and means for bodily moving the magazine mechanism vertically to bring the axis of the lowermost blank into alinement with the spindle at the said station.

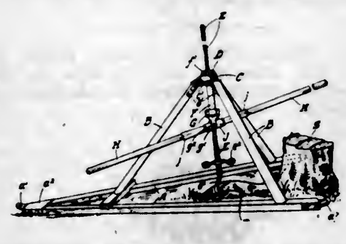
1,347,789. LEAD-VARYING MECHANISM. FRIEDERICH MCLLER, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 15, 1918. Serial No. 217,322. 5 Claims. (Cl. 82—5.)

1. The combination of devices for holding a rotatable blank and a threading tool in operative engagement, mechanism including a rotatable lead screw for moving the tool longitudinally, a rotatable sleeve engaging the lead screw and fixed against longitudinal movement with respect thereto, a fixed element having threaded engagement with the sleeve, gear teeth on the sleeve, a transversely movable rack engaging the gear teeth, an angularly adjustable longitudinally movable taper bar for moving the rack, and means for moving the bar in timed relation with the rotation of the lead-screw.

1,347,790. PORTABLE AIR-BRUSH PLANT. CHARLES A. MURPHY, Oakland, Calif., assignor of one-half to Frank A. Tittemore, Richmond, Calif. Filed May 22, 1919. Serial No. 298,985. 3 Claims. (Cl. 91—45.)

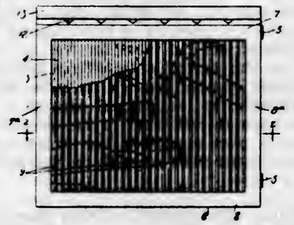
1. A portable air brush plant comprising a unit consisting of a portable base and an interconnected electric motor and air compressor carried thereby, a flexible hose connected at one end with said compressor for conducting air under pressure therefrom, and a second unit consisting

of a portable air brush and receptacle for containing the material to be sprayed attached to the other end of said



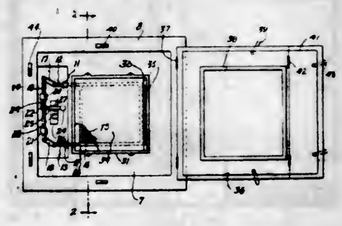
flexible connection, said flexible connection permitting the ready moving of one of said units independently of the other.

1,347,791. PROCESS OF PACKING COFFEE. WILLIAM H. PISANI, San Francisco, Calif., assignor to MAX J. Brandenstein, Manfred Brandenstein, and Edward Brandenstein, San Francisco, Calif., Copartners doing business under the firm-name of M. J. Brandenstein & Co., San Francisco, Calif. Filed Mar. 3, 1917. Serial No. 152,364. 2 Claims. (Cl. 99—8.)



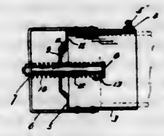
1. The process of packing roasted coffee, which consists in vacuumising and sealing a receptacle containing the coffee and then subjecting the filled receptacle to heat until sufficient gases have been developed within the receptacle to produce a pressure greater than atmospheric pressure therein.

1,347,792. STUMP-PULLER. BURTON JAMES ROBINSON, Stanley, Wis. Filed Dec. 27, 1919. Serial No. 347,806. 1 Claim. (Cl. 254—109.)



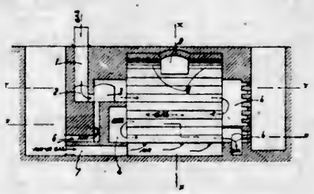
A stump pulling structure having a pyramidal frame upon alidable skids, said frame provided at its apex with a spherical bearing that sustains a pendant sleeve member adapted to offer a bifurcated pivotal connection embracing a rocking arm, the latter being apertured to allow passage of a vertically disposed ratchet bar at a point beneath the spherical bearing aforesaid.

1,347,793. CHANGING PICTURES. CHARLES W. SAALBURG, New York, N. Y. Filed Nov. 28, 1917. Serial No. 204,357. 4 Claims. (Cl. 40—137.)



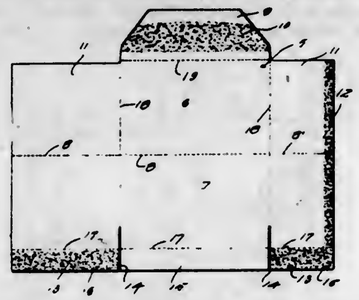
2. In combination, a composite picture made up of alternating sets of strips each showing an individual picture, and a screen in front of said composite picture having a plurality of spaced bars substantially circular in cross section.

1,347,794. PLATE-HOLDER FOR MAKING CHANGEABLE PICTURES. CHARLES W. SAALBURG, New York, N. Y., assignor to Animated Picture Products Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 28, 1917, Serial No. 204,358. Renewed Dec. 13, 1919. Serial No. 344,597. 23 Claims. (Cl. 95—36.)



5. In a device of the character described, the combination of a frame, means for holding a lined screen, and means located within said frame for shifting the same while maintaining the lines parallel in the two positions, comprising devices attached to the two ends of the screen.

1,347,795. AUXILIARY AIR-VALVE FOR CARBURETERS. MARTIN E. SCHRADER, Oakland, Calif. Filed July 2, 1917. Serial No. 178,311. 2 Claims. (Cl. 251—145.)

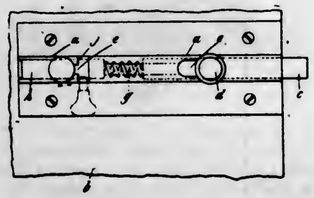


2. An air intake valve for carbureters comprising a cylindrical sleeve secured thereto, an inwardly extending radial flange on the outer end of said sleeve, a pin extending axially into said cylinder and secured thereto, a disk having a conical outer surface slidably mounted on said pin and spring means on opposite sides of said disk for normally holding the outer edge thereof in the plane of said flange.

1,347,796. BLAST-FURNACE. CHARLES STEIN, Paris, France, assignor to Societe Ch. M. Stein & Cie., Paris, France, a Corporation of France. Filed May 18, 1917. Serial No. 169,469. 1 Claim. (Cl. 263—19.)

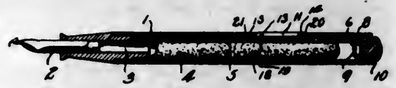
A device for heating air or gas for use in a stove of the Cowper or Whitwell type, comprising a chamber communicating with the stove, an air or gas inlet for such chamber, a combustion chamber, a conduit for supplying the combustion chamber with combustible gas, an air conduit leading from the air inlet to the combustion chamber, and a conduit communicating with said combustion chamber and surrounding said first mentioned chamber.

1,347,797. DOUBLE ENVELOP. GRACE MAE STEVENS, Middletown Springs, Vt. Filed Aug. 1, 1917. Serial No. 183,882. 1 Claim. (Cl. 229—72.)



A double compartment envelop formed from a blank having a rectangular body portion, a tongue extending from one side edge of the body intermediate its length to provide a closure flap, the body portion being provided with slits extending transversely thereof from the opposite edge and in alinement with the ends of the closure flap to provide intermediate and end tongues, the intermediate and end tongues being bent back upon themselves and the end tongues being gummed, said body being folded at the slits with the end portions extending in overlapping relation and one of the end portions having its end edge portion gummed and adhering to the edge portion of the second end portion, said blank when folded forming a receptacle having open ends and said receptacle being folded transversely intermediate its length and the closure flap extending from one of the open ends of the receptacle being tucked into the second open end to close the open end and adhering to the gummed end tongues and having its opposite face gummed for adhering to the intermediate tongues to hold the receptacle in a folded position.

1,347,798. PRODUCT SERVING AS A NITRIFIER, FERTILIZER, AND INSECTICIDE. GEORGES TRUFFAUT, Versailles, France. Filed Feb. 7, 1918. Serial No. 215,834. 2 Claims. (Cl. 71—9.)

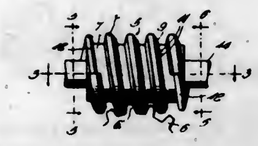


1. A product for destroying the protozoairs in the soil, which are opposed to the transformation of ammonia existing in nitrous organic matter of the soil, acting as a partial sterilizer of the soil, and as a fertilizer and insecticide, comprising a mixture of calcium sulfid and aromatic hydro-carbons which have been dephenolized and freed from their bases.

1,347,799. LOCK OR BOLT FOR DOORS AND THE LIKE. FREDERICK FRYER WILKINS, West Kilburn, London, England, assignor to Benjamin Edsall Johnson, London, England. Filed June 9, 1919. Serial No. 302,856. 4 Claims. (Cl. 292—179.)

1. A latch device including a casing having an opening, a main latch member slidable therein and having a socket in one end, a locking bolt arranged within the casing and having a reduced end portion adapted to fit in said socket of the main latch bolt, a spring confined between the end of the main latch bolt and the shoulder formed at the junction of the reduced end portion of the locking bolt with the body thereof, and a handle carried by the body of the locking bolt and coöperating with the opening in the casing to be held in locked position.

1,347,800. FOUNTAIN-PEN. PAUL E. WIRT, Bloomsburg, Pa. Filed May 11, 1917. Serial No. 167,964. 3 Claims. (Cl. 120—46.)

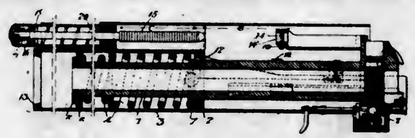


1. An operating unit for the ink sack of self-filling fountain pens including a guide pin carried by the pen casing, a presser bar for the sack having an extended bearing engagement with the opposite sides of the pin, and a depressing lever for the presser bar.

1,347,801. PROCESS FOR THE MANUFACTURE AND PRODUCTION OF CELLULOSE ACETATES. JOZ OLGIERD ZDANOWICH, London, England. Filed May 5, 1920. Serial No. 379,174. 10 Claims. (Cl. 23—24.)

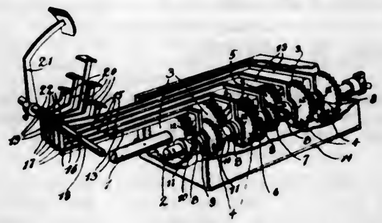
5. A process for the manufacture of cellulose esters, which comprises subjecting said cellulose to the action of a weak esterifying mixture comprising a halogen organic acid, and after partial esterification of said cellulose in said mixture adding thereto a relatively small quantity of sulfuric acid.

1,347,802. WORM-SCREW. ROBERT HENRY BOTTS, Parker, Ariz. Filed Nov. 23, 1918, Serial No. 263,865. Renewed Dec. 19, 1919. Serial No. 346,172. 1 Claim. (Cl. 74—36.)



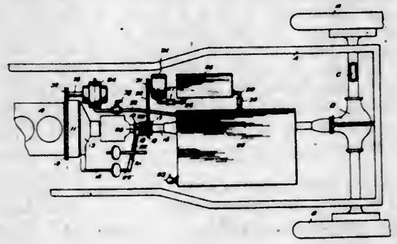
A worm having a hub and a continuous ball receiving and retaining channel in the working face of its thread and opening through the ends of the thread, said channel at its ends being enlarged, said worm having also a passage formed through its hub longitudinally inwardly of the thread, the ends of the passage being enlarged, said passage being located at the opposite side of the central longitudinal axis of the worm from the extremities of the thread, curved tubes each having an end engaged and secured within the enlargements at one end of the passage and having its opposite end secured within the enlargement at the adjacent end of the channel to form a continuous ball race, a plurality of balls disposed in the channel, the passage and the tubes for free movement therethrough, the hub having a transverse threaded passage formed therein opening through its outer face and communicating with the longitudinal passage for the introduction of balls therethrough to the passage, and a removable screw plug engaged in the threaded passage and lying with its inner end flush with the wall of the passage.

1,347,803. ORDNANCE. EMILE ALEXANDRE LOUIS BOURDELLES, Paris, France, assignor to Societe Anonyme Des Etablissements Delaunay Belleville, St.-Denis, Seine, France, a Corporation of France. Filed Jan. 6, 1919. Serial No. 269,863. 4 Claims. (Cl. 89—42.)



1. Ordnance of the class described, comprising a gun barrel, a support or casing for said barrel, a fixed bearing

therein for slidably supporting the barrel, an annular flange or fixed stop on the end of the barrel, coil springs concentric with said barrel, a pair of slidable washers mounted on the barrel for retaining the springs there

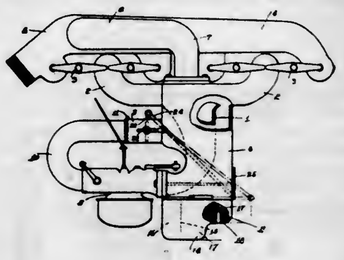


between, one of said washers adapted to bear against the fixed bearing in the casing and the other against the fixed stop on the barrel, said springs comprising a recoil mechanism when the gun is fired, and a buffer in case of mis-fire or retarded firing.

1,347,804. TRANSMISSION-GEAR. DON BYRD, Franklin, W. Va. Filed Apr. 10, 1919. Serial No. 289,098. 1 Claim. (Cl. 74—59.)

In a transmission mechanism, and engine clutch control mechanism including a rotatable shaft and means for imparting rotary movement to the shaft, a change speed gear mechanism for a speed control including a series of gears and clutches, levers controlling the clutches, each lever having a hub by which it is loosely mounted upon said shaft, clutch elements carried by the hubs of said levers, and clutch elements carried by the shaft for engaging the clutch elements of the levers to impart movement to the levers when the shaft is rotated.

1,347,805. AIR EQUIPMENT FOR AUTOMOBILES. CHARLES R. FEAGAN, Detroit, Mich. Filed Apr. 4, 1919. Serial No. 287,456. 4 Claims. (Cl. 60—57.)

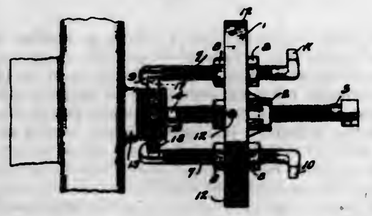


4. The combination with a vehicle, having a motor, a drive shaft therefor and a clutch for coupling said motor to the drive shaft, of an apparatus for generating and storing compressed air, comprising a high pressure tank, a low pressure storage tank communicating with the same, an air compressor communicating with the high pressure tank, and means for transmitting motion to said compressor from the drive shaft, said means becoming active upon the operation of the clutch to uncouple the motor from the shaft.

1,347,806. WELL CABLE-PUMP. JOE N. FENDER, Dallas, Tex. Filed Oct. 24, 1919. Serial No. 332,994. 4 Claims. (Cl. 103—80.)

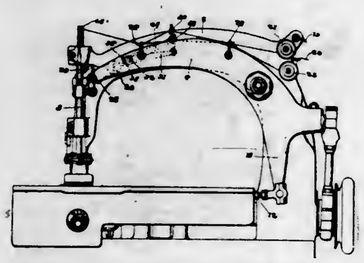
1. A pump rod comprising a casing, a working barrel in said casing and providing an annular space between the same, a strainer coupled to the lower end of the barrel, a ball valve in the lower portion of the barrel, a plunger operating in the barrel having a passage therethrough, a cage on the plunger, a ball valve retained therein and coacting with the seat formed at the upper end of the plunger, a sectional pump rod, couplings connecting the sections of the rods and connecting the lower end of the rod with said cage, a cable detachably connected to the upper end of the rod, said barrel having a reduced upper end portion and apertures adjacent thereto, a sest on the barrel, an upper barrel sitting over said first named barrel and providing a space therebetween, said upper barrel being provided with a reduced upper end and apertures therebeneath, said reduced portions of the barrels being designed for engagement by couplings connecting sections of the rod whereby to successively lift the upper and lower barrel, and a packing in the upper barrel and the casing adjacent said seat, said upper barrel being provided with openings at said packing.

1,347,807. INTAKE-MANIFOLD. GEORGE FOX, Wichita, Kans. Filed Sept. 8, 1919. Serial No. 322,467. 6 Claims. (Cl. 123—122.)



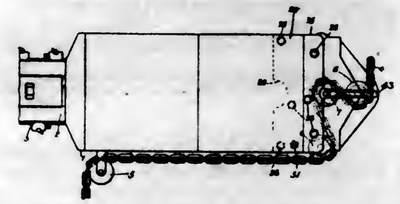
1. The combination with the carbureter, intake manifold and exhaust manifold of an engine, of a casing housing a portion of the intake manifold, means for supplying air thereto from the outer surface of the exhaust manifold, means for directing heated air from said casing to the carbureter, a burner movable into and out of position under the casing, and means operated by the movement of said burner into and out of position under the casing for closing and opening communication, respectively, between the casing and the carbureter.

1,347,806. CONSTRUCTIONAL TOY AND EDUCATIONAL DEVICE. FRANCIS PATRICK FRANKLIN, Liverpool, England. Filed Apr. 15, 1919. Serial No. 290,206. 2 Claims. (Cl. 46—35.)



1. A toy or educational device comprising two split sockets projecting from an integral central part and arranged to lie in two parallel planes but with the axis of the socket that lies in the one plane at an angle with respect to the socket in the other plane so as to enable the rods that are passed into the respective sockets to cross one another.

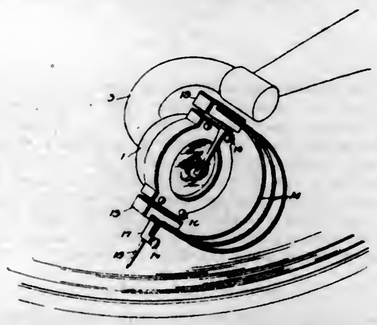
1,347,809. PULLING IMPLEMENT. GEORGE E. FRISZ and JAMES D. WILTSHIRE, Indianapolis, Ind.; said Wiltshire assignor to said Frisz. Filed July 3, 1919. Serial No. 308,381. 10 Claims. (Cl. 29—85.)



1. In an implement of the class described for removing wheels, pulleys, gears and the like from their shafts, the combination of a body having slots extending radially and circumferentially therein, a pressure applying member carried by said body, and object engaging means adjustably mounted on said body in the slots and displaceable from said slots upon movement to the circumferentially extending portion thereof.

1,347,810. THREAD-CONTROLLING MECHANISM. DE FOREST HAWLEY, Johnson City, N. Y., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 28, 1917. Serial No. 193,731. 5 Claims. (Cl. 112—244.)

1. The combination with a plurality of needles, a looper coöperating with each needle, tension means through which the threads are led from the supply to the needles, and separate means acting on the respective threads between the tension means and the needles for controlling the amount of thread used in the formation of each stitch, said separate means including devices whereby the same may be adjustable to independently vary the degree of control on the respective threads.

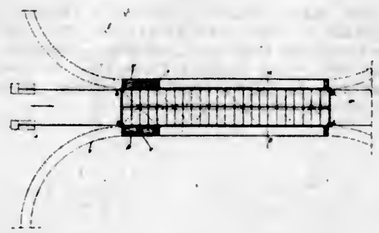


1,347,811. CLUTCH-CONTROLLING MECHANISM. MORRIS P. HOLMES, Claremont, N. H., assignor, by mesne assignments, to Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed June 5, 1916. Serial No. 101,727. 16 Claims. (Cl. 192—1.)

5. In a clutch controlling mechanism, clutch mechanism including a movable member, a pivoted actuating lever connected at one end to said movable member, a casing inclosing said elements, means connected to said lever at a point intermediate its ends and operable from the exterior of the casing for operating said lever, and means for adjusting the pivot of said pivoted lever from the exterior of said casing.

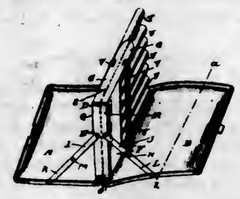
1,347,812. [WITHDRAWN.]

1,347,813. REPRODUCER FOR TALKING-MACHINES. JOHN W. KAUFMANN, Baltimore, Md. Filed May 10, 1919. Serial No. 296,088. 6 Claims. (Cl. 274—35.)



1. In reproducers, the combination with the sound box and the diaphragm, and the reproducing lever connected with the diaphragm, of bars arranged at opposite sides of the reproducer box and mounted to rock thereon, one of said bars being rigid with the reproducer lever and the other carrying the needle holder, and a connection between the said bars, said connection being resilient, and comprising substantially U-shaped springs, each having one end connected with one bar and the other with the other bar.

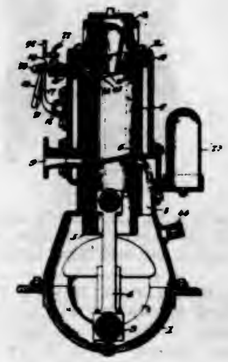
1,347,814. TOY AEROPLANE. EDWARD J. KINGSBURY and HARRY T. KINGSBURY, Keene, N. H. Filed July 17, 1919. Serial No. 311,671. 11 Claims. (Cl. 46—48.)



1. A toy of the character described, comprising a fuselage, planes and running gear made separate, and a common means for securing the same together.

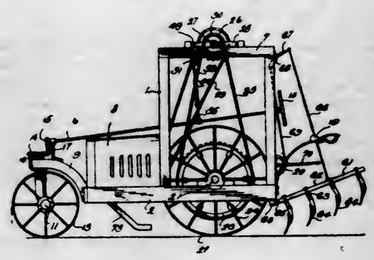
1,347,815. HANGAR FOR DIRIGIBLES. GASTON LEBNEKUGEL LE COCQ, Châteauneuf-sur-Loire, France. Filed Feb. 28, 1918. Serial No. 219,683. 1 Claim. (Cl. 20—1.)

A hangar for dirigibles comprising four separate girder poles, main girders extending between and suspended at each end from the girder poles, a roof or cover supporting main stays depending from said girders for suspending the roof or cover, rails forming tracks arranged on each side of said hangar and curving outwardly from the longitudinal axis thereof, and displaceable side walls which are supported on said rails independently of the poles, suspension girders and cover, and are movable to positions to form harbors at the ends of the hangar, but adapted to coöperate with the roof or cover when in a normal position to form a complete housing or hangar.



1,347,816. MEANS FOR FACILITATING THE WITHDRAWAL OF CIGARETTES OR THE LIKE FROM THEIR CASES. ALEXANDER MCKELLAR, Greenock, Scotland. Filed June 12, 1919. Serial No. 303,646. 2 Claims. (Cl. 206—41.)

1. In the means for the withdrawal of cigarettes and the like from their cases, a magazine composed of light metal, rear wall part lateral sides, canopy and bottom, a central partition plate constituting two chambers or compartments of unequal length, said plate having a downward extension in order to connect it conjointly with the hinge of the case, jointed levers connected each with the rear wall of magazine, and one to one leaf of the case, and the other to the opposite leaf, operating substantially in the manner and for the purposes hereinbefore described and shown on the drawings.

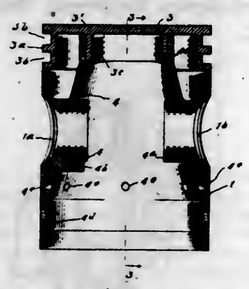


1,347,817. INTERNAL-COMBUSTION ENGINE. GEORGE STANLEY MACDONALD, Portland, Oreg. Filed Nov. 8, 1918. Serial No. 261,621. 3 Claims. (Cl. 123—32.)

1. In an internal combustion engine, a crank case, a cylinder, a piston disposed within the cylinder, the movements of the piston controlling a communication between the crank case and the interior of the cylinder, a combustion chamber at one end of said cylinder, a spraying nozzle disposed in said combustion chamber, a fluid fuel pump connected with said spraying nozzle, a pressure chamber disposed in the line of connection between said pump and said spraying nozzle, a rock shaft for operating said spraying nozzle, an eccentric for operating said rock shaft, an auxiliary manually operated lever for controlling the communication between the pressure chamber and the

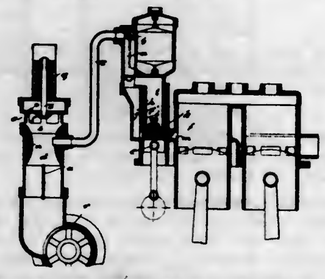
spraying nozzle, and a relief valve for preventing the pressure in said pressure chamber from exceeding a predetermined amount.

1,347,818. TRACTOR-CULTIVATOR. GEORGE E. MALIN, Painesville, Ohio. Filed Aug. 24, 1918. Serial No. 251,296. 12 Claims. (Cl. 180—1.)



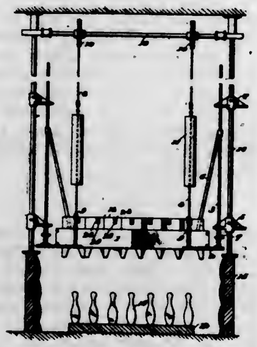
1. In a tractor the combination, of a pair of supporting frames, means connecting said frames, a traction wheel carried by one of said supporting frames, an auxiliary supporting frame yieldably and slidably connected to the other supporting frame, a traction wheel carried by said auxiliary sliding frame to permit movement thereof in relation to the first mentioned traction wheel, and a prime mover carried by one of said frames and operatively connected to said traction wheels.

1,347,819. PISTON FOR INTERNAL-COMBUSTION MOTORS. LOUIS P. MOOERS, Cincinnati, Ohio, assignor, by direct and mesne assignments, to The Cleveland Trust Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 28, 1916, Serial No. 106,502. Renewed Oct. 24, 1919. Serial No. 333,111. 10 Claims. (Cl. 74—108.)



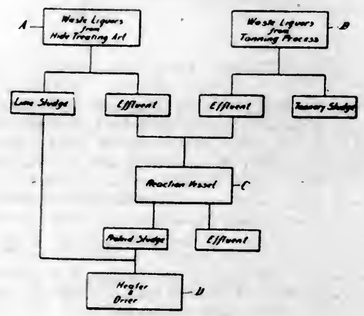
8. A piston for an internal combustion motor, comprising a cast metal head provided with an inner and an outer flange, a tubular sheet metal guide section, and

means formed with wrist-pin bosses for connecting the lower end of said guide section to the inner flange of said



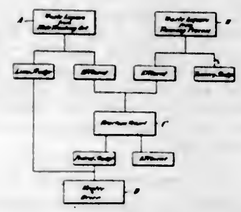
head, said means being mechanically secured to said inner flange without obstructing the opening to the lower surface of the head within said inner flange.

1,347,820. CARBURATION DEVICE FOR INTERNAL-COMBUSTION ENGINES. WILLIAM MORGAN, Birmingham, England, assignor of one-half to William Mills, Birmingham, England. Filed Feb. 14, 1917. Serial No. 148,618. 11 Claims. (Cl. 123—29.)



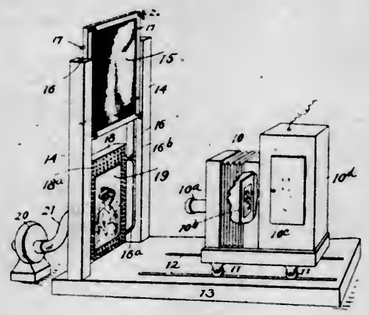
6. An internal combustion engine fuel system, including a fuel issuing jet, means for communicating thereto a difference of gaseous pressure created by the engine, a conduit interconnecting said jet and the combustion chamber of the engine, and a pump inserted in said conduit to convey the fuel and the gaseous carrying medium therefor into the combustion chamber, the delivery of fuel from said jet being independent of the operation of said pump.

1,347,821. PIN-SETTING MECHANISM. ALFRED N. OLSEN, Rock Rapids, Iowa. Filed July 2, 1919. Serial No. 308,081. 14 Claims. (Cl. 46—54.)



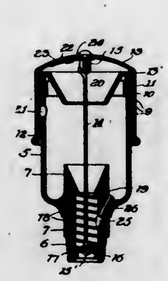
1. In pin setting mechanism, means to receive and support a pin in upright position and including a bolstering member movable in a direction to recede from the pin and in so moving operable to seat the same without a change in the position of the pin and to steady the pin upon receding therefrom.

1,347,822. RECOVERY OF PROTEIDS FROM WASTE LIQUORS OF THE HIDE-TREATING ART. CHARLES LEE PECK, New York, N. Y., assignor to The Dorr Company, New York, N. Y., a Corporation of Delaware. Filed July 20, 1918. Serial No. 245,854. 3 Claims. (Cl. 71—6.)



1. The method of recovering, from the waste liquors of the lime process of the hide-treating art, material available for use as a fertilizer, which consists in separating said liquors into a sludge and an effluent, precipitating the proteids contained in said effluent by subjecting them to the action of the waste liquors from the tanning process, and then heating the precipitated proteids in the presence of sodium hydroxid.

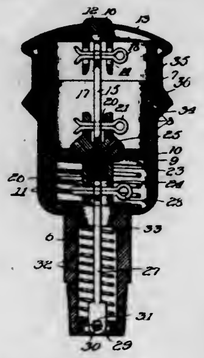
1,347,823. RECOVERY OF PROTEIDS FROM WASTE LIQUORS OF THE HIDE-TREATING ART. CHARLES LEE PECK, New York, N. Y., assignor to The Dorr Company, New York, N. Y., a Corporation of Delaware. Original application filed July 20, 1918, Serial No. 245,854. Divided and this application filed Jan. 6, 1920. Serial No. 349,791. 2 Claims. (Cl. 71—6.)



1. The method of recovering, from the waste liquors of the lime process of the hide-treating art, material available for use as a fertilizer, which consists in separating said liquors into a sludge and an effluent, precipitating the proteids contained in said effluent by subjecting them to the action of the waste liquors from the tanning process, and then heating the precipitated proteids in the presence of caustic lime; substantially as described.

1,347,824. PHOTOGRAPHIC APPARATUS. GEORGE N. PIPER, Cleveland, Ohio, assignor to The Postergraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 11, 1917. Serial No. 173,954. 5 Claims. (Cl. 88—24.)

1. A photographic apparatus such as herein described, a flat rigid support for a flexible sensitized sheet, a flat screen adapted to be positioned close to the support and parallel thereto, and means whereby a sensitized sheet placed against the holder and the screen are held in proper relationship with respect to each other by air pressure.

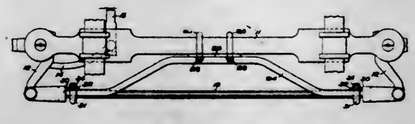


1,347,825. OIL-CUP. THOMAS G. PIHLFELDT and FELIX HARTUNG, Chicago, Ill. Filed Apr. 17, 1919. Serial No. 290,695. 6 Claims. (Cl. 184—38.)

5. An oil-cup comprising a body portion having an outwardly projecting nipple and an inwardly projecting boss spaced from the walls of said body to form a reservoir, the boss and the nipple being provided with communicating openings forming an oil exit and the body being provided with an opening extending from the reservoir to the oil exit, a fabric plug in the latter opening, means attached to said nipple for supplying oil through the opening therein when suction is produced in the cup, and means for producing suction and compression in the cup.

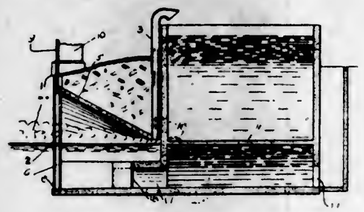
1,347,826. OIL-CUP. THOMAS PIHLFELDT and FELIX C. HARTUNG, Chicago, Ill. Filed May 22, 1919. Serial No. 298,929. 6 Claims. (Cl. 184—45.)

5. In an oil cup, a body portion, a piston movable therein, said piston having an opening therein, a valve adapted to seat upon the opening in the piston, said valve being provided with a bore affording communication between the upper and lower surfaces of the piston, a fibrous plug in said bore, means for moving the valve



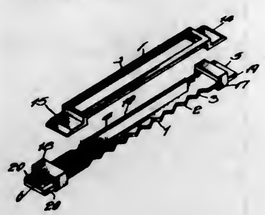
together with the piston downwardly in the cup and means for independently moving the piston upwardly when the valve is raised.

1,347,827. BUCKLE. OSCAR LLOYD RAYMER, Toronto, Ontario, Canada, assignor to Raymer Manufacturing Company, Limited, Toronto, Ontario, Canada. Filed Aug. 28, 1919. Serial No. 320,407. 4 Claims. (Cl. 24—168.)



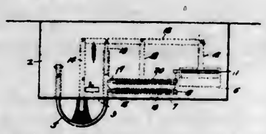
1. A buckle comprising, an outer member of loop shape having one end perforated, a tongue member arranged within said loop member having the end adjacent to the perforated end engaging said perforated end at the upper side in pivotal contact, and a flexible binding member connected to the tongue below the pivot point and extending through the perforated end of the loop, the free end passing between the free end of the tongue and the adjacent end of the loop and being gripped therebetween.

1,347,828. CONVERTIBLE RAILWAY AND ROADWAY VEHICLE. ANDREW L. RIKER, Bridgeport, Conn., assignor, by mesne assignments, to The Locomobile Company, Bridgeport, Conn., a Corporation of Delaware. Filed Nov. 10, 1916. Serial No. 130,658. 5 Claims. (Cl. 105—180.)



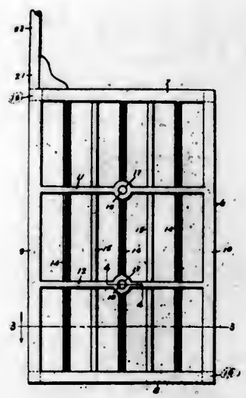
1. A convertible roadway and railway vehicle comprising, in combination, a pair of wheels, a pair of steering knuckles on which said wheels are journaled, an axle on which said knuckles are pivoted for steering movement, a link connecting said knuckles together to cause their conjoint movement, means for turning said knuckles to steer the vehicle when used on a roadway, and means for holding said link in fixed position thereby to adapt the vehicle for use upon a railway, the last-mentioned means including a holding member disposed lengthwise of said axle and link, and means for clamping said member laterally against said axle and said link.

1,347,829. WAVE-MOTOR. JOHN WARREN SOUTHWICK, North Collins, N. Y. Filed Aug. 8, 1918, Serial No. 248,133. Renewed Oct. 18, 1919. Serial No. 331,745. 2 Claims. (Cl. 61—20.)



1. A device of the character specified, comprising a reservoir, a funnel shaped passage leading from the shore to the front wall of the reservoir and adapted to receive the breaking waves, a pipe leading from the small end of the passage upwardly and delivering to the reservoir, turbines in the bottom of the reservoir for utilizing the water therein, a passage beneath the reservoir leading from the turbines to the first named passage, check valves at the delivery end of the said last named passage for permitting the water to flow freely outward and for preventing the inflow of the water, a gate at the large end of the first named passage, and a hatchway leading to the passage beneath the reservoir for permitting access thereto.

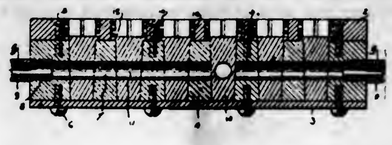
1,347,830. HAIR-WAVER. BERNARD A. STERLING, Chicago, Ill. Filed Sept. 15, 1919. Serial No. 323,762. 8 Claims. (Cl. 132—18.)



1. In a device for producing Marcel waves in hair, an elongated flat base member around which the strand of hair to be waved is adapted to be wound, a longitudinally extending thin projection or rib on the upper face of the base, a forming member for forcing the hair down toward the base on each side of said projection, and means for retaining the forming member in clamping position.

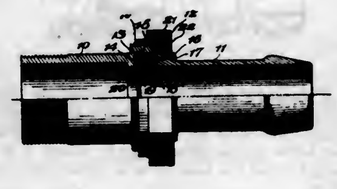
1,347,831. COIN-CONTROLLED APPARATUS FOR RENTING UMBRELLAS. HENRY C. WILLIAMS, York, Pa. Filed Apr. 11, 1919. Serial No. 289,349. 2 Claims. (Cl. 194—54.)

1. A coin-controlled umbrella renting apparatus comprising a casing having in its top slots for coins of different denominations, a loop-shaped umbrella securer movable rectilinearly forwardly and backwardly in the front wall of the casing and having a beveled projection on one of its side arms, a key-controlled spring-pressed bolt, a rod movable rearwardly in the front wall of the casing by an umbrella in the securer and having a notch for the engagement of said bolt, a lever fulcrumed at an intermediate point of its length and having its inner arm connected with said rod, a retractile spring to move said arm of said lever forwardly, a rod connected to said inner arm of the lever and extending forwardly therefrom and bearing against one end of the umbrella securer, a guard connected to the outer arm of said lever and arranged to close the slot for the coin of smaller denomination when an umbrella is out of the securer and to render said slot open when the umbrella is in the securer, a receptacle in communication with and extending downwardly from the slot for the coin of larger denomination and a delivery cup, a lever arranged to engage the lateral beveled projection on the umbrella securer and also arranged in said receptacle to be engaged and actuated by a coin placed in the upper portion thereof, a receptacle arranged below the slot for the coin of smaller denomination, and a lever arranged to normally extend into the first-named receptacle to support the coin therein and having a portion extending into the second-named receptacle whereby the lever will be engaged by the deposited coin of smaller denomination and moved to release the coin of larger denomination in the first-named receptacle.



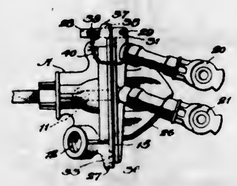
1,347,832. ELECTRODE FOR SECONDARY OR STORAGE BATTERIES. JAMES M. ALLEN, St. Louis, Mo., assignor, by direct and mesne assignments, to James M. Allen, Fred P. Smith, and Frederick D. Tucker, trustees for The Smith-Allen Battery Company, St. Louis, Mo. Filed Aug. 18, 1919. Serial No. 318,081. 2 Claims. (Cl. 204—29.)

2. An electrode comprising two complementary members, each of which is provided with thansverse and longitudinal bars spaced apart, said members being capable of holding an active material and being uniformly spaced apart entirely from top to bottom and from side to side, whereby the active material in both plates may be subjected to the electrolyte on four sides throughout the entire surfaces of the plates, and means for holding said members in such spaced relation.



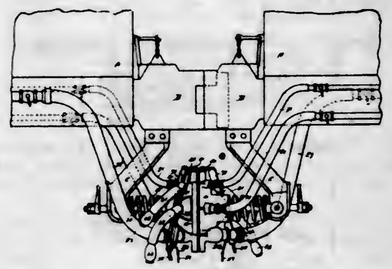
1,347,833. PIPE-LOCK. EDWARD BAKLEY, Chatham, N. J. Filed Apr. 30, 1919. Serial No. 293,720. 1 Claim. (Cl. 277—69.)

A pipe lock, including a body formed with a passage extending throughout its entire length, chambers formed at right angles to such passage, valves having their body portion extending into such chambers, shoulders formed upon such valves bearing against the upper face of the body portion, a top plate above such shoulders and body



portion, and springs interposed between the top plate and shoulder portion of the valves for seating the latter at all times firmly within their respective chambers.

1,347,834. PIPE-UNION. MARTIN A. BARBER, Cleveland, Ohio, assignor to The American Automatic Connector Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 9, 1918. Serial No. 249,182. 18 Claims. (Cl. 285—120.)



3. A pipe coupling or union including in combination, a tubular member having an interior annular recess forming a seat for a packing ring in one end thereof, a packing ring on said seat projecting from the end of said member, a second tubular member having a conical boss at one end of larger diameter than the interior periphery of said packing ring and adapted to engage said interior periphery, and means for drawing said members together to thereby compress said packing ring.

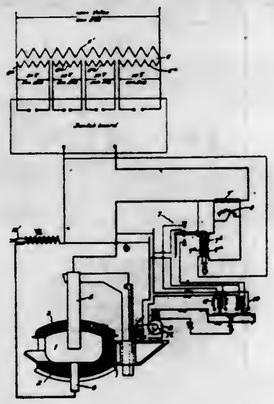
1,347,835. AUTOMATIC TRAIN-PIPE COUPLING. MARTIN A. BARBER, Cleveland, Ohio, assignor to The American Automatic Connector Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 9, 1918. Serial No. 249,183. 8 Claims. (Cl. 285—24.)

1. In combination with an automatic train pipe coupler head, an interchange formed with a conduit having a coupling for connection to a train pipe and means for securing the interchange against the face of the head including a pin at one side of said interchange and an arm at the other, said head being formed with a socket to receive the pin and support the interchange against the head at the pin side, said head also formed with an aperture through which the arm may extend, and means coöperating with said arm and head to draw and secure the interchange tightly against the face of the head.

1,347,836. TRAIN-PIPE CONNECTOR. MARTIN A. BARBER, Cleveland, Ohio, assignor to The American Automatic Connector Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 24, 1919. Serial No. 284,810. 12 Claims. (Cl. 284—6.)

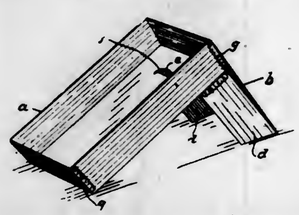
6. In a train pipe connector, the combination of a head, having an orifice, a bar adapted to lie against the face of the head and having an orifice adapted to register with the orifice of the head, a link pivoted at one end to the end of the bar and pivoted at the other end to the head, said pivots extending transversely of each other.

1,347,837. WIRE WHEEL. THOMAS ARCHIBALD BOWERS, Brookline, Mass. Filed Aug. 26, 1919. Serial No. 320,027. 6 Claims. (Cl. 21—69.)



6. A crimped-body end-headed heat-tempered wire spoke, having a terminal arch extending from the spoke in the plane of the crimp to permit forming of the spoke in one machine operation and prevent undue straining of the metal, on a curve which is long to avoid a sharp bend and thus prevent crystallization between the head and spoke body.

1,347,838. METHOD OF TREATING METALS. REGINALD H. BULLEY, Syracuse, N. Y. Filed Apr. 24, 1916, Serial No. 93,070. Renewed Aug. 5, 1919. Serial No. 315,567. 12 Claims. (Cl. 204—64.)

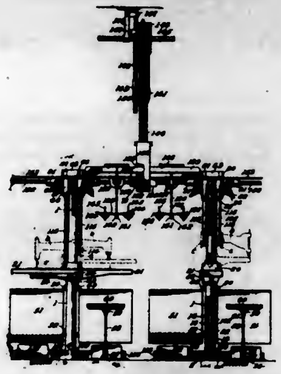


1. The method of treating metal by the use of an electric arc, which consists in subjecting the metal to the influ-

ence of a relatively high voltage electric arc in an electric circuit of given kilowatt load, and then reducing the

voltage of said arc in said circuit while retaining substantially the same kilowatt load.

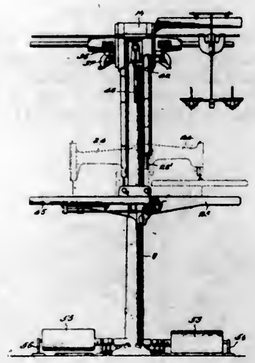
1,347,839. BOX. HENRY R. COONS, Philadelphia, Pa., assignor, by mesne assignments, to Edwin Wolf, Benjamin Wolf, Clarence Wolf, Louis Wolf, and Albert Wolf, Copartners doing business as National Metal Edge Box Company, Philadelphia, Pa. Filed June 3, 1919. Serial No. 301,521. 6 Claims. (Cl. 206—44.)



6. A box comprising a body and a lid hinged to the body and having an end wing, the lid comprising a plurality of sections hinged one to another, the lid sections being foldable relatively to the box and to each other to bring said wing in parallelism with and under that end portion of the box bottom which it is desired to elevate and in supporting relation thereto.

1,347,840. POWER-STAND FOR SEWING-MACHINES. ALBERT H. DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Feb. 8, 1917. Serial No. 147,296. 22 Claims. (Cl. 45—27.)

1. A sewing machine stand comprising a column carrying intermediate its head and foot a sewing machine supporting shelf or table and provided at its foot with a flange extending at substantially right angles to the axis of the column, a floor-plate constructed separately from said column, fastening means for tiltably securing said flange to the floor-plate and positive means for tiltably adjusting the said column on the floor plate.



14. A sewing machine stand comprising a support having a shelf with an opening therein, a sewing machine having a pivotal mounting at one side of the opening, and means whereby the pivotal mounting may be moved from one side of the opening to the other while the machine is being swung on its pivot.

21. A sewing machine stand comprising an upright column carrying intermedite its head and foot a sewing machine shelf or table having an opening to receive a sewing machine bed-plate and an adjacent depending rib or flange formed with a lateral detent notch, a rock-shaft sustained by said shelf or table beneath said opening and

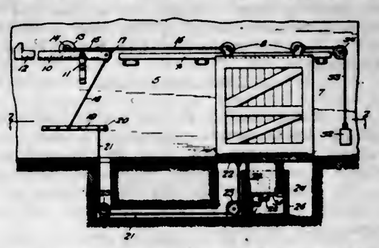
carrying a normally depending knee-lever for operation upon an element of the sewing machine, and a knee-plate fixed to said lever with an edge adapted to spring into said detent notch of the shelf-flange by which it is yieldingly detained when the knee-lever is raised into inoperative position.

1,347,841. CONTROLLING MEANS FOR POWER-TRANSMITTERS. ALBERT H. DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Original application filed Feb. 8, 1917, Serial No. 147,296. Divided and this application filed Oct. 30, 1918. Serial No. 260,254. 5 Claims. (Cl. 74—81.)

3. The combination of a hollow support, an operatively connected power transmitter and machine carried by said support, a lever for controlling said transmitter and having a cam arm, a second lever having a roller adapted to engage said cam arm, a spring normally pressing said roller away from said cam arm, an inclosed link connected at one end to said second lever, a rock-shaft having an arm connected to the other end of said link, a second arm on said rock-shaft, a treadle, and an extensible connection between said treadle and said second arm.

1,347,842. BELT-GEARING. ALBERT H. DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Original application filed Feb. 8, 1917, Serial No. 147,296. Divided and this application filed Oct. 30, 1918. Serial No. 260,255. 14 Claims. (Cl. 74—21.)

5. A belt gearing comprising a power-transmitter, a housing therefor, a driven pulley, a belt connection between said transmitter and pulley, a movable belt-housing, idler-wheels for said belt carried by said housing, and means for moving said housing to thereby tighten said belt.

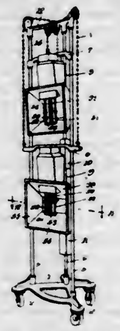


1,347,843. SPOOL-HOLDER. ALBERT H. DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Original application filed Feb. 8, 1917, Serial No. 147,296. Divided and this application filed Oct. 30, 1918. Serial No. 260,256. 5 Claims. (Cl. 242—139.)

1. In combination, a spider-frame, means carried thereby for supporting said frame, a socket carried by said frame, a standard adjustable in said socket, and spool-holding and thread-guiding means carried by said standard.

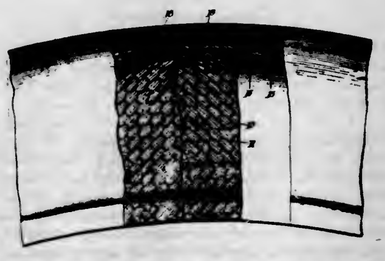
1,347,844. DOOR OPENING AND CLOSING MECHANISM. HOWARD E. DOAN, Joliet, Ill. Filed Mar. 24, 1919. Serial No. 284,554. 8 Claims. (Cl. 268—8.)

1. In mechanism of the kind described a horizontal stationary track, a door supported therefrom and movable thereon, a tiltable arm adjacent said door, a weight on said arm and movable toward and away from the fulcrum thereof, means connecting said weight and door, a yielding member positioned adjacent the doorway adapted to hold said arm in neutral position in which the weight carried thereon will not gravitate, and means



connecting said member to said arm whereby the yielding of said member permits said arm to tilt and gravitate the weight carried by the latter and thereby move the door.

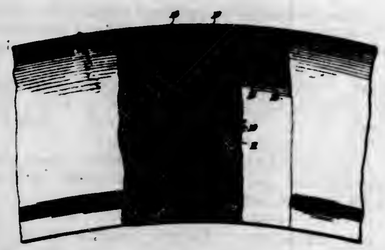
1,347,845. STABLE CASEIN SOLUTION AND PROCESS OF MAKING SAME. HENRY V. DUNHAM, Mount Vernon, N. Y. Filed Mar. 25, 1919. Serial No. 285,078. 10 Claims. (Cl. 134—20.)



10. A process which comprises dissolving boric acid in hydrofluoric acid solution, adding an alkali to form a salt, adding casein and agitating and heating.

1,347,846. MULTIPLE LAMP. JOSEPH GELB, New York, N. Y. Filed Sept. 29, 1917. Serial No. 193,884. 3 Claims. (Cl. 240—67.)

1. A multiple lamp comprising a portable base and a plurality of uprights connected at their lower ends by said base, a plurality of lamps sliding separately on said uprights and separate counterbalancing means for said lamps for maintaining each of them independently at different elevations.



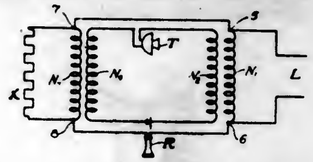
1,347,847. TIRE-CASING. HANS E. GRABAU, Long Island City, and A. CHARLES SCHWARTZ, New York, N. Y.; said Grabau assignor to said Schwartz. Filed Jan. 11, 1918. Serial No. 211,378. 9 Claims. (Cl. 152—13.)

1. A vehicle tire casing including two superposed strips of fabric each strip comprising flat strain resist-

ing strands made up of a plurality of straight threads in superposed layers, said strands being interwoven with spaced relatively wean threads, the strands and latter threads each extending obliquely from bead to bead of the tire and the strands of the two stripe extending in opposite directions.

1,347,848. TIRE-CASING FABRIC AND METHOD OF MAKING THE SAME. HANS E. GRABAU and A CHARLES SCHWARTZ, New York, N. Y.; said Grabau assignor to said Schwartz. Original application filed Jan. 11, 1918, Serial No. 211,378. Divided and this application filed Aug. 1, 1918. Serial No. 247,816. 4 Claims. (Cl. 154—2.)

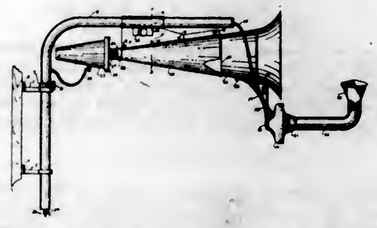
1. The method of making a dense strip comprising several layers of oblique parallel threads for the carcass of pneumatic tires consisting in interweaving spaced single threads with warps comprising a plurality of parallel threads arranged in superposed layers, impregnating the fabric with rubber, compressing it to flatten it, and cutting the fabric on the bias into strips.



2. A strip of tire casing fabric of a width to extend from bead to bead of a tire and having its longitudinal ends at an angle of substantially 45° to its length comprising a dense sheet of substantially uniform thickness consisting of straight parallel threads arranged in superposed layers extending from side to side of the strip at an angle of substantially 45° to its length and spaced connecting threads extending at an angle of substantially 90° to the first mentioned threads to resist lateral separation of the latter threads in making the tire.

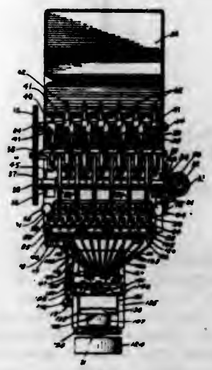
3. A strip of tire casing fabric including flat strands interwoven with undulating cross threads, the strands being substantially quadrangular in cross section and the side of one strand being in contact substantially throughout its surface with a side of the adjacent strand, the strands and cross threads each extending obliquely from edge to edge of the strip.

4. A strip of tire casing fabric including flat strands forming the warp, interwoven with single spaced weft threads undulating under and over the strands, said strands comprising a plurality of substantially straight threads disposed in superposed layers, the side of one strand being in contact with the side of an adjacent strand and the strands and weft threads each extending obliquely from edge to edge of the strip.



1,347,849. SIGNALING-CIRCUIT. PAUL J. HACKETT, Seattle, Wash., assignor to Universal High-Power Telephone Co., Seattle, Wash. Filed June 21, 1919. Serial No. 305,755. 12 Claims. (Cl. 179—81.)

1. In a two way signaling system, the combination of two transformers each having a plurality of windings, and four component elements consisting, respectively, of a circuit for the transmission and reception of signals, a receiving circuit proper, a balancing circuit proper, and a transmitting circuit, three of said component elements forming a serial circuit, one winding each of said transformers bridging separately two of said component elements in said serial circuit, the remaining fourth component element forming another serial circuit with windings of said transformers, said serial circuit being inductively related to first named serial circuit, said elements being so proportioned and related that the impedance of the combination comprising said first named



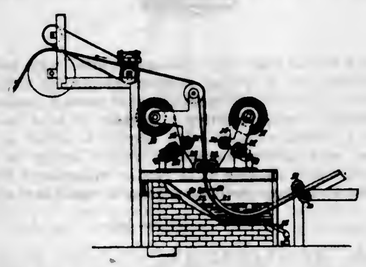
circuit, said receiving circuit proper, said balancing circuit and said transformers, as seen from said transmitting circuit proper, is equal to the impedance of said transmitting circuit proper.

1,347,850. DESPATCHER'S TELEPHONE APPARATUS. PAUL J. HACKETT, Seattle, Wash., assignor to Universal High-Power Telephone Co., Seattle, Wash. Filed July 3, 1919. Serial No. 308,545. 3 Claims. (Cl. 179—151.)

1. In a telephone apparatus of the class described in combination with, a swinging arm and a sound amplifying horn with a receiver connected thereto, a supporting means adapted for supporting said horn and receiver by said swinging arm, said supporting means comprising a split cylindrical sleeve telescoping said arm, a conical sleeve lined with a yielding material and telescoping said horn, a connecting member between said sleeves, and a means for clamping said split cylindrical sleeve to said swinging arm, said supporting means adapting said horn to be rotated about said arm and held at any desired position.

1,347,851. MACHINE FOR CARDING SAFETY-PINS. JOHN FELIX HAEFELE, Bridgeport, Conn. Filed Dec. 2, 1918. Serial No. 264,989. 74 Claims. (Cl. 163—8.)

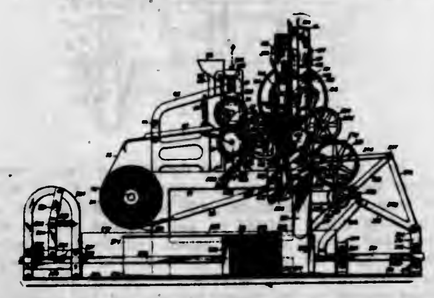
1. A machine of the character described comprising a hopper in which closed safety pins are placed loosely, a



shaft in said hopper, arms extending from the shaft, swinging arms pivoted to said arms, each swinging arm being provided with a hook adapted to pick up pins singly, and pockets into which the pins drop from the hooks.

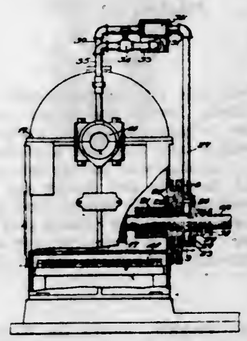
7. A machine of the character described comprising pockets into which pins are dropped singly, rotating disks having pegs, and vertically moving carriers in the pockets by which the pins are placed in position to be picked up by the pegs.

29. A machine of the character described comprising oscillatory reversing disks having slots which receive pins singly, oscillatory guard plates having slots through which the pins may pass when presented head end first, intermediate connections whereby the guard plates are picked up and carried by the disks, and spring controlled means acting on the guard plates independently of the disks.



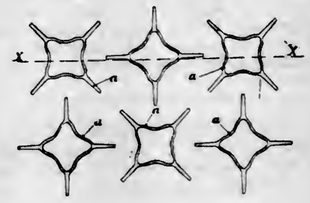
45. A machine of the character described comprising feeding mechanism, means for producing endwise reversal of pins not presented head end first, and means for producing axial reversal of pins presented with the point side out of operative position.

1,347,852. APPARATUS FOR PRODUCING PROTECTED METAL SHEETS HAVING PERFORATED FIBROUS LAYERS. JAMES HAMILL, Lambertville, N. J., assignor to Asbestos Protected Metal Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 9, 1917. Serial No. 167,512. 3 Claims. (Cl. 154—1.)



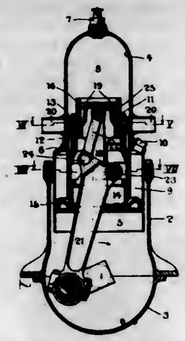
1. Apparatus of the character described, comprising means for coating the surface of a metal sheet with a relatively thick or heavy saturant, a bed roll to support a paper web or sheet, a perforating roll coöperating with the bed roll to perforate the paper web or sheet while the latter is supported by said bed roll, and means for applying said perforated paper web to the coated surface of said metal sheet.

1,347,853. MACHINE FOR MAKING PAPER BOXES. ARTHUR W. HARRIS, Sleepy Eye, Minn. Filed Nov. 27, 1917. Serial No. 204,165. 40 Claims. (Cl. 93—81.)



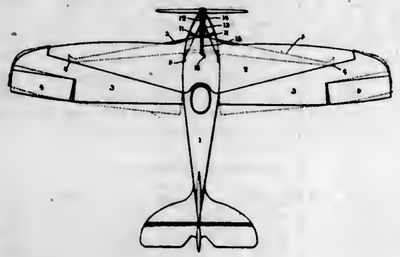
4. In a machine for making paper boxes from an endless web or strip of paper, an intermittently rotating forming device, an intermittently rotating feeding, scoring and lock forming device feeding the strip of paper in the length required for one box to the said forming device, scoring the said strip of paper transversely and providing it with locking members, a tucking device coacting with the said forming device and interlocking the said locking members, a cutting device coacting with the said tucking device to cut off a length of the strip of paper fed forward by the said feeding, scoring and lock forming device at each action thereof, a main shaft, and connecting means connecting the said main shaft with the said devices to actuate the same in the proper sequence.

1,347,854. OILING SYSTEM FOR ELEVATORS. FRANK A. HECHT, Jr., Chicago, Ill. Filed July 3, 1919. Serial No. 308,476. 12 Claims. (Cl. 184—6.)



1. In a device of the class described, in combination, a main shaft, a drive shaft, gearing connecting said two shafts, a casing inclosing said gearing, oil in said casing, said drive shaft entering said casing below the oil level and said main shaft entering said casing only above the oil level, and an oil supply system adapted to maintain various pressures of oil at varying points, said system being so arranged that the point where said drive shaft enters said casing is a point of low pressure.

1,347,855. PAVEMENT. EMILE HENRY, Paris, France, assignor to Societe Anonyme Des Hauts-Fourneaux et Fonderies de Pont-A-Mousson, Meurthe et Moselle, France. Filed Apr. 11, 1919. Serial No. 289,239. 2 Claims. (Cl. 94—8.)

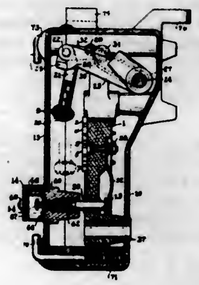


1. A pavement comprising in combination: a foundation, a concrete surface layer on said foundation, and cast iron blocks distant from each other in all of their parts, embedded in said surface layer and extending entirely throughout the same, each block being composed of a thin vertical wall forming a closed figure of an approximately rectangular shape and outer radial arms, the arms on each block extending between the arms of the adjacent blocks.

1,347,856. INTERNAL-COMBUSTION ENGINE. JAMES DE WITT HILL, Scottdale, Pa. Filed Mar. 10, 1919. Serial No. 281,762. 8 Claims. (Cl. 123—47.)

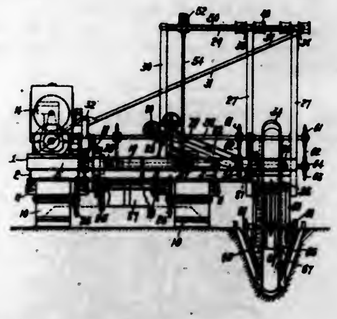
1. In a two cycle internal combustion engine, a two diameter cylinder having gas supply and combustion chambers, and reciprocating coaxial overlapping pistons a supply chamber inlet port, and a combustion chamber exhaust port, a passage way through said pistons opening into the said chambers, and opened and closed by the relative movements of the pistons, one of said pistons serving to open and close the exhaust port, and the other piston serving to draw a charge into the supply chamber and force it through said passage way into the combustion chamber.

1,347,857. AIRPLANE. JAMES DE WITT HILL, Scottdale, Pa. Filed May 9, 1919. Serial No. 295,949. 6 Claims. (Cl. 244—12.)



1. In an airplane, wings, each comprising longitudinally disposed fixed and movable overlapping members pivotally connected and having coacting conical bearing surfaces, said movable member being adjustable to different positions relative to the fixed member.

1,347,858. LIQUID-FUEL BURNER. EDWIN E. HILLIKER, East Aurora, N. Y. Filed Aug. 29, 1918, Serial No. 251,881. Renewed June 8, 1920. Serial No. 387,513. 7 Claims. (Cl. 158—69.)

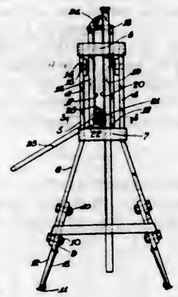


1. A liquid fuel burner comprising a longitudinal mixing chamber having an inlet for liquid fuel and air at one end, two delivery chambers arranged lengthwise on opposite sides of the mixing chamber and communicating at their corresponding ends with the opposite end of the mixing chamber and causing the combustible mixture as it issues from said mixing chamber to divide and move through said delivery chambers in an opposite direction from the path of movement through said mixing chamber, and each of said delivery chambers being provided on its outer longitudinal side with a burning surface, and a U-shaped heating pipe arranged around the mixing and delivery chambers and having parts arranged adjacent to said burning surfaces and having an outlet opening toward said inlet of the mixing chamber.

1,347,859. CIRCUIT-CONTROLLER. ALBERT J. HORTON, White Plains, N. Y. Filed July 15, 1915. Serial No. 40,122. 16 Claims. (Cl. 200—4.)

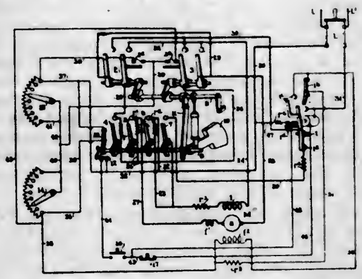
1. In a circuit controller, the combination with stationary contacts and a contact member adapted to coöperate therewith, of means for operating said contact member in an abutting relation relative to certain of said contacts and in a sliding relation with respect to other of said contacts, said means including a return spring so associated with said member as to render engagement thereof with said stationary contacts dependent upon said spring.

1,347,860. EXCAVATING AND GRADING MACHINE. LEO A. KRUPP, Findlay, Ohio, assignor to The Buckeye Traction Ditcher Company, Findlay, Ohio, a Corporation of Ohio. Filed Aug. 18, 1919. Serial No. 318,174. 3 Claims. (Cl. 37—29.)



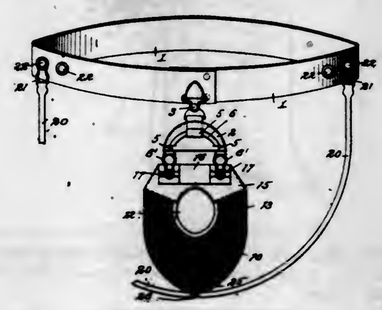
2. In a machine of the class described, a frame, transversely spaced tractor means supporting the frame, with the frame extending at one side beyond said means, an excavating means carried by the extended side of the frame and capable of being raised and lowered relative thereto, means for delivering the digging of said excavating means to a point between the tractor means, and means carried by the frame for leveling and spreading the diggings delivered to the ground between the tractor means.

1,347,861. PACKAGE-FASTENER. WILLIAM D. LA BATT, Chicago, Ill. Filed Feb. 18, 1920. Serial No. 359,657. 9 Claims. (Cl. 24—17.)



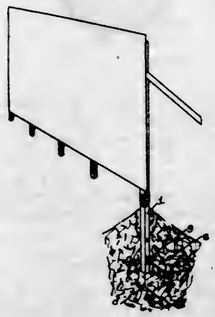
1. A self-contained separable package-fastener of the character described including in combination a pair of sticker-elements adhesive-coated on their back faces for application to the package, and a metal clip detachably securing said elements together and having a flexible end portion overlying the front face of one of said elements and adapted to be bent up to permit disconnection of said elements and normally shielded by a part of the clip, substantially as described.

1,347,862. JACK. WILLIAM T. LEARMONTH, Portage, Wis. Filed Nov. 28, 1919. Serial No. 341,106. 3 Claims. (Cl. 254—95.)



1. In a lifting jack, the combination of a supporting frame, a jack frame carrying trunnions vertically swingingly mounted on the upper portion of said supporting frame and provided with a rack, a lifting bar slidably mounted in said jack frame and provided with a rack, a pinion meshing with both racks, and means swinging with the jack frame to turn said pinion.

1,347,863. MOTOR-CONTROLLER. WILMAR F. LENT, New York, N. Y., assignor to The Cutler-Hammer M'f'g Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed June 21, 1916. Serial No. 104,841. 1 Claim. (Cl. 172—240.)

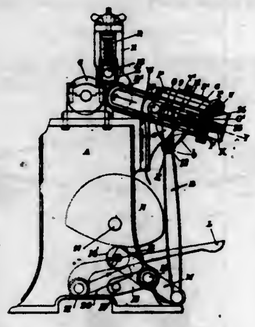


In a controller for an electric motor having a shunt field winding, in combination, an electro-responsive switch responsive to establish power circuits for both the motor armature and shunt field windings and releasable upon failure of voltage to interrupt said circuits, means to increase the resistance of the circuit of said switch after response thereof to increase its sensitiveness to voltage reductions and means controlled by said switch to establish local circuits for the motor armature and shunt field windings upon interruption of their power circuits.

1,347,864. SUSPENSORY. STEPHEN A. MARKER, Newark, N. J. Filed Jan. 3, 1918. Serial No. 210,210. 4 Claims. (Cl. 128—161.)

3. A suspensory comprising a waist band, a sack, crotch straps composed of rubber tubing, and eyelet joining two ends of said tubing and adapted to detachably engage the sack, and clasps retained within the open ends of said tubing for detachably engaging the waistband.

1,347,865. ANCHOR-POST. ALBERT L. MELVIN, Detroit, Mich. Filed Nov. 26, 1915. Serial No. 63,381. 6 Claims. (Cl. 189—29.)



1. An anchor post comprising a body member, a member adapted to engage over one end of the body member, providing a driving point therefor, a bar slidable on the body member to which the driving point member is pivoted, and means whereby the said point is turned on its pivot to anchoring position by downward movement of the bar.

1,347,866. MACHINE FOR TREATING HIDES AND SKINS. DANIEL MERCIER, Annonay, Ardèche, France. Filed Dec. 30, 1919. Serial No. 348,359. 3 Claims. (Cl. 149—16.)

3. A machine for treating hides and skins comprising a working cylinder, a supporting cylinder for the work; means for driving said cylinders, slides in which the ends of the supporting cylinder are respectively journaled, inclined slideways for said slides, means for imparting to said slides a reciprocating movement, abutments for limiting the upward stroke of the slides, screws carrying

said abutments, respectively, two adjusting worms, gears connecting each of said worms to one of the screws, re-

spectively, two sets of indicating means, and gears connecting each of the worms to the corresponding set of indicating means.

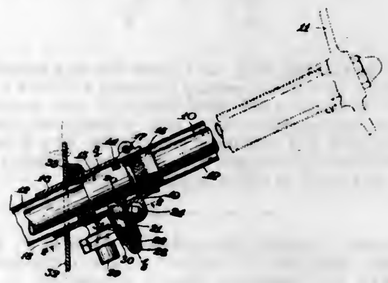
1,347,867. MILEAGE OR LIKE TICKET. PHILIP J. MITTEN, Philadelphia, Pa. Filed Nov. 2, 1918. Serial No. 260,843. 5 Claims. (Cl. 206—52.)

1. A mileage or like ticket case comprising a housing having a double cylindrical wall of which the outer part is provided with a window and an exit slot having a bar between them and of which the inner part is spaced inward from the window and bar to present a feed surface and is provided at one end of said surface with an opening into the housing and at the other end of said surface with an inclined slot.

1,347,868. ANIMAL-TAG. SAMUEL R. NICHOLS, Madison, Wis. Filed June 6, 1919. Serial No. 302,332. 2 Claims. (Cl. 40—3.)

2. An animal identification tag comprising a U-shaped member, a tubular shank integral with one of the arms of said member and having its outer surface tapering from the arm to its end and meeting its inner bore to form an annular cutting edge of the same diameter as its bore, said tapered end being insertible through the flesh and through an opening in the other end of the arm against which it is crimped and firmly held.

1,347,869. BITUMINOUS COMPOSITION. RAYMOND G. OSBORNE, Los Angeles, Calif. Filed Oct. 1, 1919. Serial No. 327,772. 6 Claims. (Cl. 106—31.)

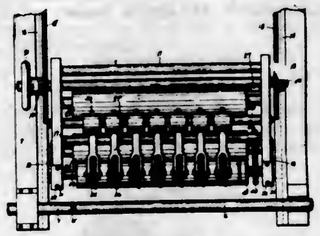


1. A composition of matter comprising a plastic substance impregnated with a gas, and a cementitious substance.

1,347,870. TREATMENT OF COTTON-SEED MEATS. CECIL O. PHILLIPS, New York, N. Y. Filed Aug. 8, 1918. Serial No. 248,146. 2 Claims. (Cl. 87—6.)

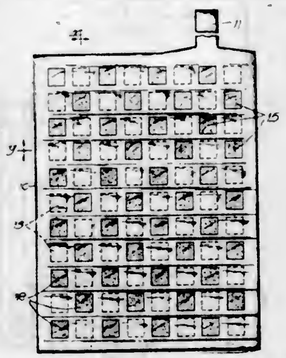
1. The method of improving the extraction of oil from cottonseed meats which comprises intimately incorporating with the meats a small amount of a dilute caustic soda solution, the amount of the solution being insufficient to effect neutralization of more than a small fraction of the total fatty acids present, subjecting the resulting meats to a cooking operation, and expressing the oil from the cooked meats; substantially as described.

1,347,871. STEERING-POST LOCK. CHARLES R. PIGGINS and FREDERICK H. PIGGINS, Racine, Wis. Filed Jan. 11, 1919. Serial No. 270,703. 2 Claims. (Cl. 70—90.)



1. In a steering post lock, a casing adapted to surround a steering post, a supporting plate having adjusting pivotal connection therewith, a steering post inclosing tube, means on the casing for clamping the steering post inclosing tube, a steering post sleeve within the casing provided with a recess and having a split tapering threaded end, a nut threaded on the end of the sleeve for clamping it to the steering post, a sliding bolt within the casing adapted to engage the recess of the steering post sleeve, means for sliding the bolt, and a lock for locking the bolt.

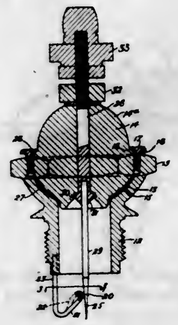
1,347,872. SLITTING MECHANISM. WILLIAM A. PRINGLE, Niagara Falls, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada, a Corporation of Ontario. Filed Dec. 7, 1916. Serial No. 135,585. 6 Claims. (Cl. 164—65.)



1. In an apparatus of the character described, in combination, a winding shaft, means adapted to drive said shaft to wind material thereon, means displaceable relative to said shaft adapted to slit the material to be wound on said shaft, and means whereby the movement

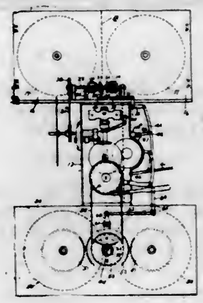
of the material to be slit operates the slitting means, said last-named means being maintained in driving coöperation with said slitting means during displacement of the slit-

ting means and comprising a roller driven by the material to be slit and adapted to guide said material to the slitting means, said roller being automatically movable toward and from said slitting means.



1,347,873. BATTERY-GRID. PAUL B. RABE, Chicago, Ill., assignor to O. K. Giant Battery Co., Gary, Ind., a Corporation of Delaware. Filed Apr. 30, 1919. Serial No. 293,607. 3 Claims. (Cl. 204—29.)

3. A grid plate for storage batteries, having a plurality of grid paste receiving cells of substantially frusto-pyramidal shape formed therein, said cells being arranged in ranks and files and each having its walls tapering to an opening at one of the plate faces, alternate cells in each rank and each file being open on the same side of the plate, the intervening cells of each rank and each file being open at the opposite side of the plate, the common walls for adjacent cells in each rank and each file being of substantially uniform thickness.

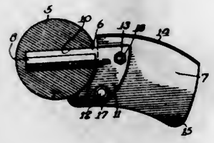


1,347,874. SPARK-PLUG. JAMES E. RICH, Boston, Mass., assignor to The Federal Corporation, Westfield, Mass., a Corporation of Massachusetts. Filed Mar. 5, 1919. Serial No. 280,772. 3 Claims. (Cl. 123—169.)

1. A spark plug comprising a tubular nipple engageable with a combustion chamber wall, and having a grounded electrode composed of a length of wire bent to form a neck constituting the terminal portion of the electrode, arms diverging from the neck, and two substantially parallel legs arranged at an angle to said arms and inserted in the inner end of the nipple, an insulator secured in the nipple, and a conducting electrode extending through and secured to the insulator, and having a terminal portion separated from said neck by a spark gap, the said arms and legs firmly supporting the terminal portion formed by said neck, and the legs being substantially parallel with and equidistant from the conducting electrode, the said neck being substantially parallel with the axis of the conducting

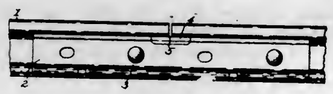
electrode, and its outer portion being reduced to form a salient angle, the apex of which faces the conducting electrode.

1,347,875. MOTION-PICTURE MACHINE. ARTHUR J. RODERICK, Jackman, Me. Filed Mar. 11, 1920. Serial No. 364,891. 10 Claims. (Cl. 88—17.)



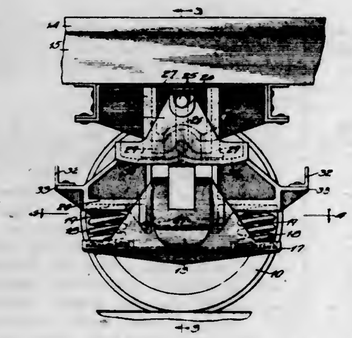
1. An apparatus of the character stated, comprising a motion picture projecting machine, a supply reel box at one end of the machine, having means for loosely supporting two supply reels, two pairs of feed rolls, one pair arranged to coöperate with one of the supply reels, and the other pair with the other supply reel, in delivering a film to the projecting machine, one member of each pair being positively driven, a feed-roll driving mechanism including a driving member, and having manually operable means for connecting the positively driven member of either pair of feed rolls with the driving member, leaving the other pair idle, and for disconnecting the positively driven members of both pairs of feed rolls from the driving member, a take-up reel box at the opposite end of the machine, a pair of take-up reels in said box, reel-driving mechanism including a driving member, separable driving connections between said member and the take-up reels, and manually operable means for connecting either take-up reel with the driving member, leaving the other reel idle, and for disconnecting both reels from the driving member.

1,347,876. PUG-MILL KNIFE. FRED O. RUSH, New Castle, Del., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed Oct. 15, 1917. Serial No. 196,688. 6 Claims. (Cl. 83—6.)



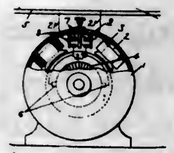
1. A pug mill knife comprising in combination a blade and a separate shank, said shank having an irregular in-

tegrally formed portion for nonrotatively mounting said shank in the mill shaft, and means including a plurality



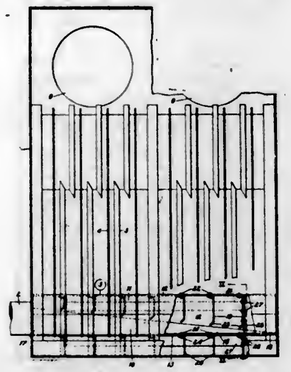
of members arranged at substantially the same distance from the axis of the shaft for securing the blade to the shank.

1,347,877. SPLICE-BAR FOR RAIL-JOINTS. THOMAS E. RUST, Waterloo, Iowa. Filed Feb. 19, 1920. Serial No. 359,976. 4 Claims. (Cl. 238—164.)



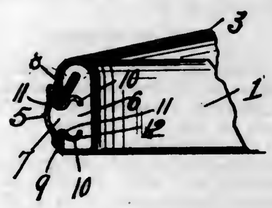
1. A splice bar for alined rails, consisting of a bar of relatively yieldable metal, and a relatively unyielding body united therewith along one edge thereof.

1,347,878. RAILWAY-CAR. VINTON E. SISSON, Chicago, Ill., assignor to Walter P. Murphy, New York, N. Y. Filed Apr. 24, 1919. Serial No. 292,322. 37 Claims. (Cl. 105—165.)



1. In combination with the body, wheels, axle and journal box of a railway car, of a structure for supporting the car body on the journal box comprising a supporting member and a sliding member associated with the box, cushioning means interposed between said members, and means connecting said sliding member to the car body which has capacity for longitudinal and lateral movements.

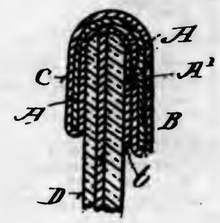
1,347,879. CONTROL DEVICE FOR EXPLOSION-PROOF ELECTRICAL APPARATUS. CHARLES W. STARKER and CHARLES H. HODGKINS, Pittsburgh, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 8, 1918. Serial No. 216,105. 4 Claims. (Cl. 172—36.)



1. The combination with an electric motor comprising a plurality of polar projections and field-magnet windings therefor, of an electric switch located between adjacent polar projections.

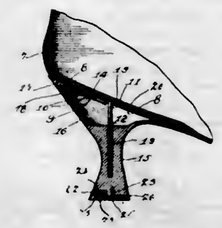
1,347,880. CONTROL APPARATUS. CHARLES C. WHITTAKER, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 2, 1916. Serial No. 134,762. 21 Claims. (Cl. 204—1.)

1. A weir for liquid rheostats having longitudinally extending liquid-ejecting means of gradually varying size.



1,347,881. AUTOMOBILE-TOP. JOSEPH VETTER, Toledo, Ohio. Filed Mar. 24, 1919. Serial No. 284,601. 5 Claims. (Cl. 296—135.)

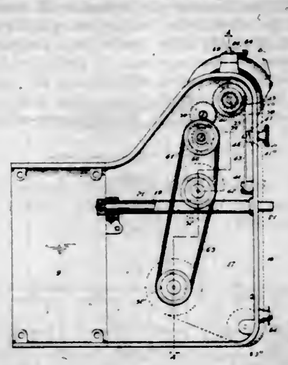
4. In a top of the class described, a frame bow having a longitudinally extending channel in its outer side with the mouth of said channel restricted in width relative to the body portion of the channel, and a clamping strip adapted to be removably fitted into the mouth of said channel to coöperate with the walls thereof to clamp interposed covering material, said strip being formed of



sheet metal of a springy nature and having its opposite side edge portions turned inwardly toward each other and then outwardly to form recesses for receiving the walls of the channel mouth and to form legs with the portions thereof without the recesses of greater normal width than the width of the channel mouth and terminating in inwardly inclined portions to facilitate a forcing of said legs into the channel mouth.

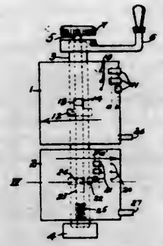
1,347,882. CALENDAR-HEAD. JOHN B. WEBER, Union Hill, N. J., assignor to The Osborne Company, Newark, N. J., a Corporation of New Jersey. Filed Mar. 3, 1920. Serial No. 363,030. 4 Claims. (Cl. 40—107.)

2. A calendar head comprising a core of flexible metal, and a covering of paper surrounding the core, the core and covering being folded over together to hold the calendar sheets.



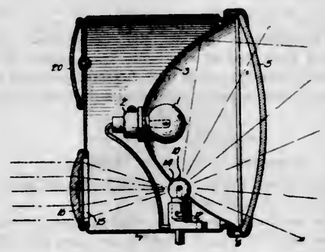
1,347,883. SHOE-HEEL. AUGUST WEDEIN and JOHN PERCY STEVENS, Mason City, Iowa. Filed Feb. 11, 1920. Serial No. 357,993. 3 Claims. (Cl. 36—42.)

1. A shoe comprising a heel having at its upper rear portion within the walls thereof a forwardly extended ledge and with a vertically disposed screw-threaded opening, a plate secured on the lower surface of the heel portion of a shoe and having its rear portion free of the shoe to engage said ledge, another plate located on the inner surface of the heel portion of the insole and having an opening therein to register with the opening in the heel and a screw extended through the opening in the last named plate, the insole and engaging the opening in the heel.



1,347,884. GRAPHIC RECORDING INSTRUMENT. OTIS WHITE, Springfield, and HERBERT W. YOUNG, Chicago, Ill., assignors to Sangamo Electric Company, Springfield, Ill., a Corporation of Illinois. Filed Oct. 14, 1916. Serial No. 125,730. 12 Claims. (Cl. 242—55.)

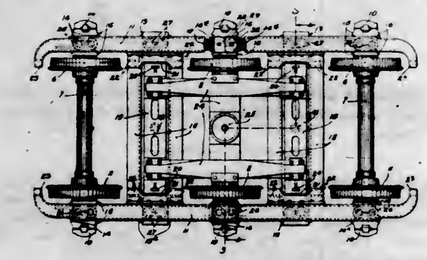
1. In a graphic recording instrument, a base, a chart-holding frame detachably connected with said base, a motor supported by said base at one side of said chart-holding frame, chart-supporting means carried by said frame, a separable driving connection between said motor and said chart-supporting means, means for locking said chart-holding frame in operative relation to the base, and means associated with said locking means and operated by



the locking of said frame in operative position for automatically connecting said motor with said chart-supporting means.

1,347,885. CONTROL APPARATUS. THOMAS C. WURTS, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 16, 1917. Serial No. 142,642. 13 Claims. (Cl. 200—18.)

3. A control apparatus for electrical systems embodying a plurality of movable contact-carrying members, a shaft loosely associated therewith, and adjustable means for determining which movable member shall be actuated by movement of said shaft.



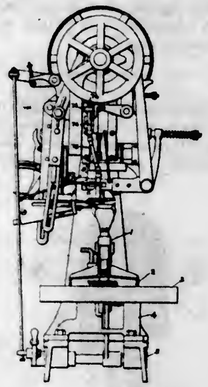
1,347,886. VEHICLE-LAMP. ALBERT L. ARENBERG, Chicago, Ill. Filed Jan. 8, 1920. Serial No. 350,072. 1 Claim. (Cl. 240—46.)

A vehicle lamp having a casing provided with a substantially parabolic reflector adapted to throw the light

rays forward, the reflector having means for supporting the main lamp bulb approximately at the axis of the reflector with the filament approximately at the focus of the reflector, the reflector also having an opening noncentrally located, an auxiliary lamp placed in juxtaposition to said opening whereby the rays may be projected both forward and backward, the casing also having an opening in the back, and a transparent body extending across the opening in the casing substantially directly back of the auxiliary lamp.

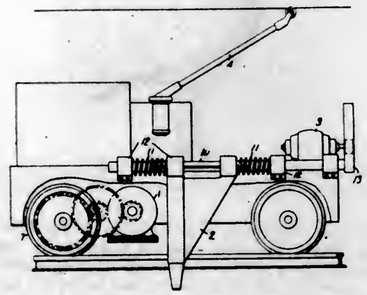
1,347,887. CAR-TRUCK. JOHN C. BARBER, Chicago, Ill. Filed Nov. 10, 1919. Serial No. 336,917. 6 Claims. (Cl. 105—196.)

1. In a car truck, the combination with end and intermediate wheels and a truck frame, said intermediate wheels being mounted for lateral movements in respect to the truck frame and end wheels, of a bolster structure carried by said truck frame, and lateral motion devices permitting lateral movements of said bolster structure independently of the lateral movements of said intermediate wheels and in respect to the truck frame.



1,347,888. SCHOOLROOM-CHECKER. WALTER L. BISSELL, Cleveland, Ohio. Filed May 7, 1920. Serial No. 379,525. 5 Claims. (Cl. 283—1.)

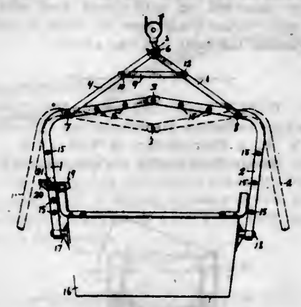
1. In a school-room checker, the combination of a base or holder; a filler pad of separable transparent sheets secured thereto; and a seating plan inserted beneath a transparent sheet and secured against movement relative to said sheet.



1,347,889. SEWING-MACHINE. CHARLES C. BLAKE, Brookline, Mass. Filed Aug. 8, 1916. Serial No. 113,724. 26 Claims. (Cl. 112—33.)

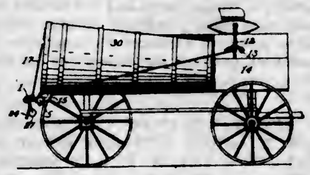
1. A shoe machine, having, in combination, an operating tool, a shoe support longitudinally movable and rotatable to transfer the point of operation of the tool around the shoe, a tool carrier, and a plurality of feet mounted on the carrier in the same vertical plane as the operating tool arranged to engage the shoe and adapt themselves to the curvature thereof and swing the carrier during the transfer of the tool around the shoe to maintain the tool

substantially normal to the shoe, substantially as described.



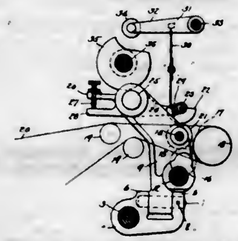
1,347,890. CONTROL SYSTEM. GRAHAM BRIGHT, Wilkinsburg, GEORGE H. F. HOLY, Pittsburgh, and HARRY K. HARDCASTLE, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 12, 1915. Serial No. 61,056. 12 Claims. (Cl. 104—149.)

1. In a control system, the combination with an electric locomotive, and a plurality of extraneous supply-circuit conductors two of which respectively correspond to forward and reverse operation, of means controlled at a distance from the locomotive for operating the same through the medium of said conductors, and means dependent upon the position of the locomotive relative to the respective conductors for automatically stopping the locomotive.



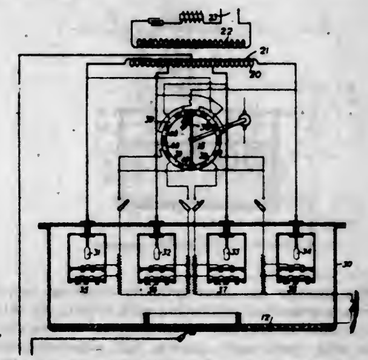
1,347,891. BAIL. EDWARD G. CARR, Milwaukee, Wis., assignor to The Lakewood Engineering Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 7, 1919. Serial No. 288,065. 3 Claims. (Cl. 294—68.)

1. A bail composed of bail arms pivoted together and having their ends bent downwardly, in combination with slings connected with the bail arms at points removed from their pivotal connection, and means for preventing



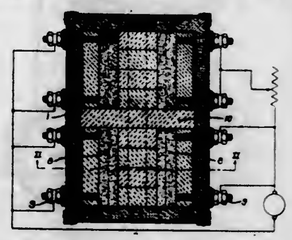
relative movements of the bail arms with respect to each other beyond a predetermined extent.

1,347,892. LIQUID-FERTILIZER DISTRIBUTER. PETER CHRISTIANSEN, Cedar Falls township, Blackhawk county, Iowa. Filed Feb. 13, 1919. Serial No. 276,836. 3 Claims. (Cl. 299—29.)



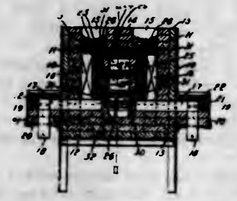
1. In combination, a valve-chamber in communication with a liquid-supply, an elongated conduit with closed ends and having delivery orifices, said conduit being in communication with said valve-chamber and mounted thereon to rock transversely thereof, and means for maintaining said conduit in an adjusted position of equilibrium, consisting of a rod supported on and positioned in spaced relation to said conduit, and a weight adjustably slidably mounted on and releasably secured to said rod.

1,347,893. SHEET-FEEDING MACHINE. CARL E. CHRISTOPHEL, Pearl River, N. Y., assignor to Dexter Folder Company, Pearl River, N. Y., a Corporation of New York. Filed Mar. 14, 1919. Serial No. 282,580. 10 Claims. (Cl. 74—46.)



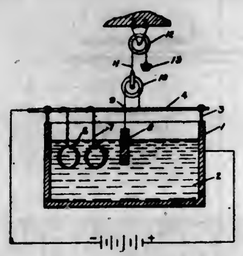
1. In a sheet feeding machine, a feeder frame, sheet feeding means, a sheet calipering device comprising co-operating calipering elements and means for supporting said calipering device from said frame, said supporting means including laterally spaced movable joints whereby said elements are maintained in substantially constant relation to each other and the calipering device as a whole is permitted to adjust its position with respect to said frame.

1,347,894. VACUUM-TYPE INVERTED CONVERTER. LEWIS W. CHUBB, Edgewood Park, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 29, 1915. Serial No. 64,154. 12 Claims. (Cl. 175—363.)



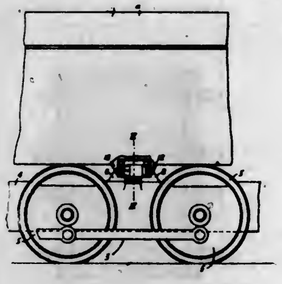
1. The combination with a direct-current supply circuit, of an alternating-current consumption circuit, and a vacuum-type inverted converter interlinking said two circuits, said converter embodying means for approximating a sine wave in the alternating current produced thereby.

1,347,895. ELECTRIC-FURNACE FOR HEATING RIBBONS AND BARS. ORA A. COLBY, Larimer, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 16, 1918. Serial No. 254,221. 8 Claims. (Cl. 219—36.)



1. In an electric furnace, the combination with a heating chamber, of a resistor forming the roof of said chamber, supporting means associated with said resistor to provide said heating chamber with a rectangular cross-section, said resistor being adapted to be made hotter at one portion than at another.

1,347,896. DOUBLE-HOT-CHAMBER FURNACE. ORA A. COLBY, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 14, 1918. Serial No. 266,713. 20 Claims. (Cl. 204—64.)



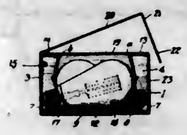
1. In an electric furnace, the combination with two associated heating chambers, of a preheating chamber and resistors for supplying heat to all of said chambers.

1,347,897. ELECTROLYTIC PICKLING PROCESS. JOHN COULSON, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 3, 1917. Serial No. 200,043. 6 Claims. (Cl. 204—7.)

1. The process of electrolytically pickling copper objects which comprises subjecting said objects, as cathodes, to the action of an electric current, to dis-associate the surface oxid upon said objects, and simultaneously recovering the copper which is set free on account of insufficient cohesion.

1,347,898. LOCOMOTIVE. GEORGE M. EATON, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 16, 1917. Serial No. 142,634. 11 Claims. (Cl. 105—199.)

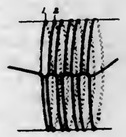
1. In a vehicle, the combination with a truck, of a vehicle body mounted thereon, a fixed pin pivotally connecting said truck and body, and means for cushioning relative longitudinal movements of the truck and body to reduce the breaking strains on said fixed pin, said means also tending to maintain said truck and body parallel to one another.



2. In a vehicle, the combination with a truck, of a vehicle body mounted thereon, independent pairs of opposed jaws on opposite sides of the longitudinal center line of said vehicle, and resilient means in the spaces between said jaws for cushioning relative longitudinal movements of said body and truck.

3. In a vehicle, the combination with a truck, of a vehicle body mounted thereon, a fixed center pin pivotally connecting said truck and body, independent pairs of opposed jaws on opposite sides of the longitudinal center line of said vehicle, and resilient means in the spaces between said jaws for cushioning relative longitudinal movements of said body and truck to reduce the breaking strains on said fixed center pin, said means also tending to maintain said body and truck parallel to one another.

4. In a vehicle, the combination with a truck and a cab, of friction-draft gears disposed between the cab and the truck for cushioning longitudinal forces acting between the cab and the truck and for tending to maintain the truck in a position parallel to the cab.



5. In a vehicle, the combination with a truck and a vehicle body, of a friction-draft gear, and projecting jaws respectively mounted on said truck and said body for engaging the friction-draft gear to effect a resilient connection between the body and the truck.

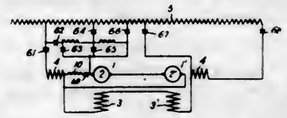
1,347,899. PAPER BOX. HENRY V. EDINGTON, Chicago, Ill., assignor to Sefton Manufacturing Corporation, Millbrook, N. Y., a Corporation of New York. Filed Feb. 6, 1917. Serial No. 146,875. 6 Claims. (Cl. 229—29.)

1. A cardboard container for electric lamps comprising a top and a bottom and opposite side walls, and a section having two opposite flat spacing portions supported adjacent the plane of the top of the container and respectively extending to said side walls and having also an approximately semi-cylindrical spacing and supporting portion forming a closed curve and continuous with said flat portions, said semi-cylindrical portion being formed with opposite openings arranged to constitute seats for the bulb and neck portions respectively of the lamps.

1,347,900. RESISTANCE UNIT. CARL R. ENGLUND, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 18, 1919. Serial No. 290,989. 5 Claims. (Cl. 219—63.)

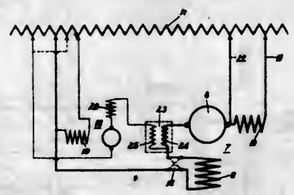
1. A method of forming a coil which consists in forming a series of closed loops and laying each successive loop on a support in a direction opposite to that of the previous loop and interlocking each successive loop with said previous loop.

1,347,901. RETARDED-DELIVERY DEVICE FOR FOUNTAIN-PENS. WILLIAM T. FITZPATRICK, Waterloo, Iowa. Filed Sept. 8, 1919. Serial No. 322,436. 1 Claim. (Cl. 120—50.)



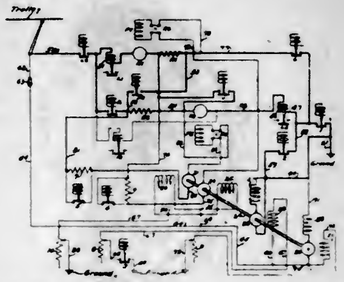
In a fountain-pen, a barrel having an open end, a pen-nib mounted in said open end, and an elongated ink-carrying body also mounted in said open end, below, longitudinal with and contacting with the troughed under face of said pen-nib, and having a raised longitudinal rib medially positioned in said trough, said rib being transversely numerously upwardly dentated along its length leading from the barrel to the anterior part of the pen-nib, the detents obstructively delaying the flow of ink along said trough toward said pen-nib.

1,347,902. SPRINKLING-SPOON. FRIEDRICH GRAFFENBERGER, Milwaukee, Wis. Filed Nov. 8, 1919. Serial No. 336,762. 7 Claims. (Cl. 299—102.)



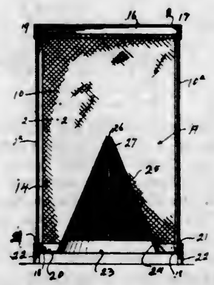
3. A sprinkling spoon comprising a bowl and a cover, one of which is formed with small jet apertures, the cover being formed with a filling opening below the plane of the jet apertures and with a vent opening, and a handle attached to the bowl.

1,347,903. SYSTEM OF CONTROL FOR DYNAMO-ELECTRIC MACHINES. RUDOLF E. HELLMUND, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 4, 1916. Serial No. 76,153. 4 Claims. (Cl. 172—276.)



3. The combination with a transformer and an alternating-current commutator motor having an armature, an inducing-field winding and an exciting-field winding, of a resistor, switching means for permanently connecting said inducing and exciting-field windings in series relation across a portion of said transformer, switching means for connecting one terminal of said armature and said resistor to a point intermediate said field windings and for connecting the remaining terminals of said resistor and said armature to an intermediate point of said transformer, switching means for eliminating said resistor from said circuit and for connecting said armature in parallel relation with said inducing-field winding.

1,347,904. REGENERATIVE CONTROL FOR ALTERNATING-CURRENT COMMUTATOR-MOTORS. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 10, 1917. Serial No. 141,612. 10 Claims. (Cl. 172—276.)

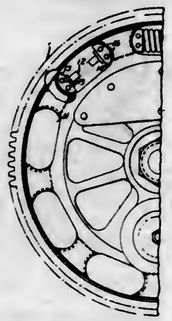


10. The combination with a source of alternating current, of a dynamo-electric machine of the commutator type provided with working windings and an exciting field winding, of means for effecting recuperative operation of said machine comprising means for impressing an auxiliary electromotive force upon said exciting field winding, said electromotive force embodying a component in phase with the electro-motive force of said source and a component out of phase therewith, whereby the inherent series-generator action is modified to effect stable recuperative operation.

1,347,905. SYSTEM OF CONTROL. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 9, 1917. Serial No. 153,549. 7 Claims. (Cl. 172—179.)

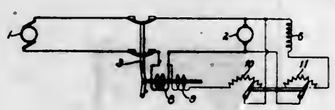
1. In a system of control, the combination with a supply circuit, and a plurality of main dynamo-electric machines adapted for both acceleration and regeneration, of an auxiliary "booster set," means for effecting "series-parallel" control of the main machines, and means for connecting one of the booster-set machines in series-circuit relation with the main machines and another in parallel-circuit relation thereto only under conditions of relatively low accelerating or regenerating main-machine speed.

1,347,906. INSECT-TRAP. WILLIAM D. JOHNSON, Oakland, Calif. Filed June 28, 1919. Serial No. 307,381. 3 Claims. (Cl. 43—118.)



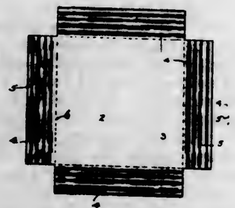
1. An insect trap comprising a cage having a bottom, top and side walls, the side walls being formed of sheets of wire gauze, the adjacent edges of adjacent sheets being detachably engaged with each other, the top being formed with a downwardly extending flange having detachable engagement with the top of the cage, the bottom of the cage being formed of flat sheet metal and having relatively short legs at its corners and having a central opening, and a cone made of a sector-shaped sheet of wire gauze, the side edges of the sheet having interlocking strips attached thereto, each strip at one margin being folded to provide a recess receiving the edges of the wire gauze and at the opposite margin being bent to form a hook, the two hooks being adapted to engage with each other whereby the sheet may be laid flat in packing but whereby the side edges of the sheet may be afterward engaged with each other to form a cone.

1,347,907. DRIVING CONNECTION. GUSTAV L. S. KRONFELD, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 14, 1916. Serial No. 136,885. 12 Claims. (Cl. 74—29.)



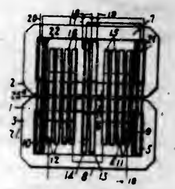
1. In a resilient gear wheel having a hub and a rim member, the combination with springs and spring seats

interposed between said members, said seats having holes therethrough, of a plurality of pins projected through



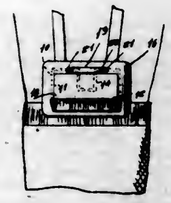
said holes in said spring seats, and turn buckles adapted to engage said pins, when in position, to compress said springs.

1,347,908. AUTOMATIC CIRCUIT-INTERRUPTING DEVICE. ARTHUR DU PASQUIER and JOHN MACKEY LANGHAM SLATER, Hale, England, assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 1, 1916. Serial No. 134,435. 9 Claims. (Cl. 175—294.)



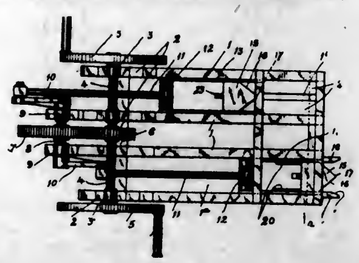
1. In an electrical system, the combination with a translating device having a plurality of windings, of means for controlling the circuit of said device in accordance with the relative values of the currents traversing said windings, said means comprising a movable member and actuating coils therefor in circuit with said windings.

1,347,909. FILLER FOR EGG-CRATES AND THE LIKE. ISIDOR PEARIS, Cleveland, Ohio. Filed Aug. 15, 1919. Serial No. 317,715. 4 Claims. (Cl. 217—35.)



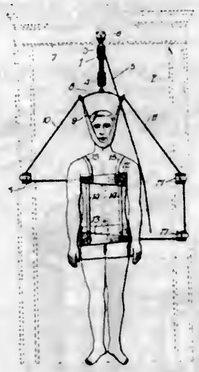
1. A filler for crates comprising a bottom member of substantially plane surface having side walls integral therewith, such side walls being corrugated, the corrugations thereon being parallel to the plane of said bottom member, a sheet of corrugated material attached to the lower surface of said bottom member and a division member adapted to substantially fit within said filler, said division member comprising a plurality of inter-locking strips of corrugated material, the corrugations on such strips being parallel to the plane of said bottom member.

1,347,910. TRANSFORMER FOR USE WITH ROTARY CONVERTERS. JOHN F. PETERS, Edgewood Park, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 29, 1915. Serial No. 24,742. 5 Claims. (Cl. 175—356.)



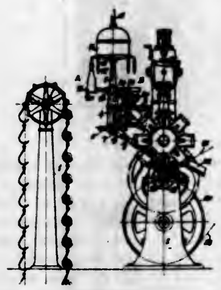
1. In a transformer, a core member, groups of sectioned high and low-tension coils inductively related thereto, means associated with at least one of said groups for increasing the reactance thereof, and means for connecting only those groups in circuit which are free from the reactance-increasing means during one period of operation and for connecting all of the coil groups in circuit during another period of operation.

1,347,911. GARMENT-SUPPORTER. HENRY J. REED, Seattle, Wash. Filed Nov. 8, 1918. Serial No. 261,664. 6 Claims. (Cl. 24—245.)



3. A garment supporter, including a supported garment engaging bar, a plate provided with a longitudinal slot to receive the bar and one edge of the garment to be supported, and a member engageable behind the bar to retain the latter in position in the slot in clamped engagement with the garment.

1,347,912. DEVICE FOR SHEARING AND CUTTING METALS. GEORGE ARCHIBALD RICHARDSON, Somerset, and AMÉDÉE MERCIER, Worthing, England; said Mercier assignor to said Richardson. Filed Aug. 11, 1919. Serial No. 316,839. 4 Claims. (Cl. 164—10.6.)

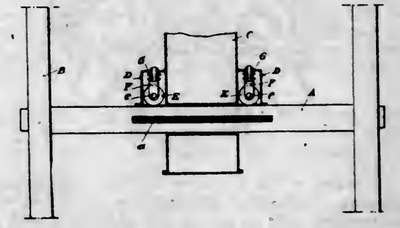


1. An apparatus for shearing or cutting metals comprising a frame, and a reciprocating frame carrying an angled edged cutting knife within the frame, said reciprocating frame having extensions constituting a support for the article to be cut, means for reciprocating the angled edged knife frame, and guides or brackets for supporting the vessel or article to be cut.

1,347,913. APPARATUS FOR RECTIFYING SPINAL DEFORMITIES. HAROLD J. RINK, Chicago, Ill. Filed Dec. 24, 1919. Serial No. 347,053. 7 Claims. (Cl. 128—75.)

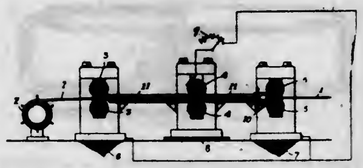
1. An apparatus of the class described, comprising mechanism adapted for attachment to an extremity of the body and to be used for exerting a pull on the spine in a longitudinal direction, and means adapted for attachment to the body adjacent to one extremity of the spine and to be used for exerting a pull on said spine in a transverse direction, said mechanism and means being arranged so as to be manipulated in unison.

1,347,914. TAPPING APPARATUS. ANDERS ANDERSSON ROSENGREN, Malmö, Sweden. Filed Dec. 5, 1919. Serial No. 342,860. 3 Claims. (Cl. 226—75.)



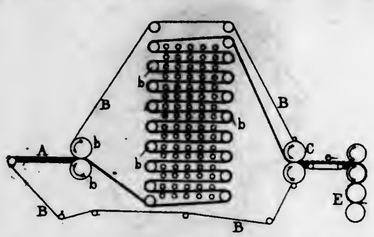
1. A filling apparatus for use in connection with capsuling or sealing machines including a main support, a vertical shaft journaled therein, a liquid containing receptacle mounted on the upper end of the shaft, valve controlled filling tubes extending from the receptacle, a bottle support connected to the shaft beneath the receptacle including a circle of bottle receivers, normally closed flaps swingably connected to the lower edge of each bottle receiver, stationary means for successively releasing the flaps during rotation of the bottle supports, means for receiving the bottles when released, and means engaged with the released flaps for returning the flaps to a closed position.

1,347,915. HAIR FOUNDATION. ROBERT SCHRANBLUM and GRACE SCHRANBLUM, Danbury, Conn. Filed Mar. 30, 1920. Serial No. 369,911. 3 Claims. (Cl. 132—23.)



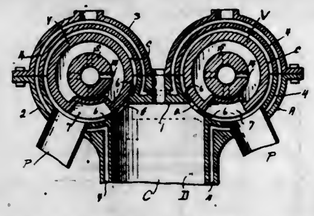
1. A hair foundation comprising a base of elliptical formation, and a central support secured to the base at the pointed ends thereof and extending entirely across said base, said central support being of a curved formation and projecting a material distance above the base.

1,347,916. ELASTIC SUSPENSION FOR WHEELED GUN-CARRIAGES. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Joint-Stock Company of France. Filed Feb. 28, 1920. Serial No. 362,118. 12 Claims. (Cl. 89—40.)



1. The combination of a wheeled axle, a vertically movable gun carriage slidable along the wheeled axle for training the gun, a connection between the wheeled axle and the gun carriage including a suspension spring to carry the load of the gun carriage during transport, and means apart from the suspension spring to transmit the load of the gun carriage to the wheeled axle during firing.

1,347,917. METHOD OF AND APPARATUS FOR ROLLING METAL. JOHN W. SHEPERDSON, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 10, 1918. Serial No. 244,181. 7 Claims. (Cl. 80—2.)

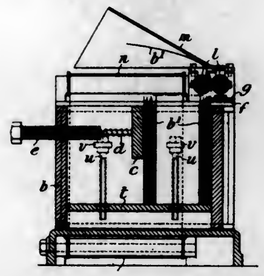


1. The herein described method of rolling metal, which consists in forwarding the metal continuously to a reducing pass, and passing an electric current therethrough in opposite directions while in transit.

1,347,918. METHOD OF MANUFACTURING JOINTING MATERIALS. ARTHUR EDWARD STAFFORD, Rochdale, England, assignor to Potter's Asbestos Company Limited, Rochdale, Lancaster, England. Filed Nov. 27, 1918. Serial No. 264,433. 4 Claims. (Cl. 154—2.)

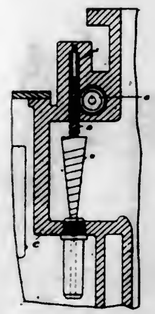
1. The method of manufacturing jointing material in long or continuous lengths which consists in mixing or preparing the composition of rubber and asbestos, feeding the soft plastic mass between two endless conveyer sheets or blankets, carrying it by such sheets over drying chests or plates and between consolidating rolls, stripping it from the conveyer sheets and finally calendering it substantially as described.

1,347,919. INTERNAL-COMBUSTION ENGINE. FREMONT STOKES, Clarksville, Ark. Filed Feb. 10, 1919. Serial No. 275,950. 3 Claims. (Cl. 123—80.)



1. An engine of the character described comprising, in combination, a cylinder, a substantially cylindrical valve casing provided with a port in communication with the cylinder, said casing being provided with an inwardly directed lip defining the port, said casing being provided with a second port, a rotary valve mounted within the casing and substantially contacting with the inwardly directed lip, said valve being surrounded by a chamber in communication with the second port, said valve being provided with a by-pass of a length in excess of the space between the ports of the casing and of a length in excess of the outside major circumferential extent of the lip.

1,347,920. HYDROCARBON-BURNER. JOSEPH J. ST. WABA, Houston, Tex. Filed Dec. 19, 1919. Serial No. 345,977. 4 Claims. (Cl. 158—71.)

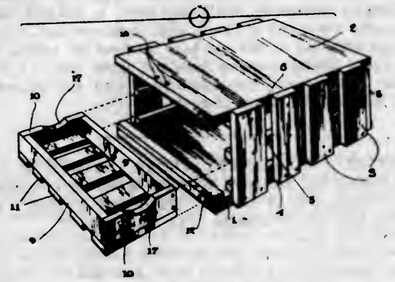


4. A hydrocarbon burner comprising an elongated reservoir, a spherical retort positioned immediately below and communicating with said reservoir, the diameter of the retort being considerably less than the length of the reservoir whereby the bottom of the reservoir is exposed throughout practically its entire length, pipes leading from the ends of the reservoir and having orifices in their outer ends, said outer ends of the pipes being so positioned with respect to the retort and reservoir that flames issuing from said orifices will impinge against said reservoir and retort, and a base for supporting the retort and reservoir, said base having a concave upper surface and a duct therein through which hydrocarbon is supplied to the retort.

1,347,921. SORTING INTO LENGTHS OR DRAGGING BRISTLES, HAIR, AND THE LIKE. ALBERT HENRY TIMMIS, Harrow, England. Filed Feb. 4, 1919. Serial No. 274,920. 5 Claims. (Cl. 15—45.)

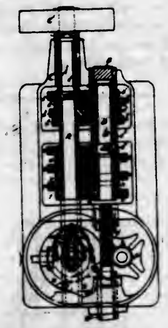
1. The method of sorting bristles and the like into lengths, consisting in arranging the bristles to be sorted into a bundle, beating the said bristles solid on the flag ends and in then subjecting the butt ends of projecting bristels to alternate pressure on opposite sides for raising those bristles from the bundle.

1,347,922. CARBURETER NEEDLE-VALVE. VICTOR E. WASSERLEIN, New York, N. Y., assignor to Wasserlein, Frocs Company, Inc., a Corporation of New York. Filed Oct. 2, 1917. Serial No. 194,410. 7 Claims. (Cl. 251—162.)



3. A valve comprising a pin, a helix arranged about said pin having the inner convolution thereof secured to one end of said pin, and said helix being longitudinally adjustable with respect to said pin for regulating the operation of said valve.

1,347,923. CRATE. WILLIAM DOUGLAS WOODRUFF, Belton, Tex. Filed Feb. 11, 1920. Serial No. 357,945. 3 Claims. (Cl. 217—40.)

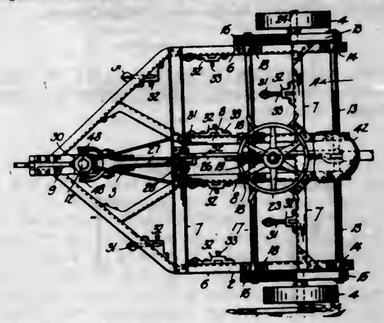


1. A crate of the character specified consisting of a top and a bottom plate, and strips spaced apart from each other connecting the top and the bottom plates, said top and bottom plates being extended beyond the strips

at their ends, an end plate arranged between the top and bottom at one end, and a removable end at the other end, said removable end comprising a plate adapted to rest at its lower edge on the bottom, the bottom having a cleat fitting outside of the end and said end having cleats en-

gaging outside of the side strips when the end is in place, a strip arranged transversely of the top of the end on the outer face, said strip and the top having openings for receiving fastening means, and the crate having upper and lower series of guides for receiving trays, and trays on the guides.

1,347,924. SPEED-CHANGE GEAR. ISAAC H. WRIGHT, Salford, England, assignor to Smith and Coventry Limited, Salford, England. Filed June 25, 1917. Serial No. 176,858. 3 Claims. (Cl. 74—59.)



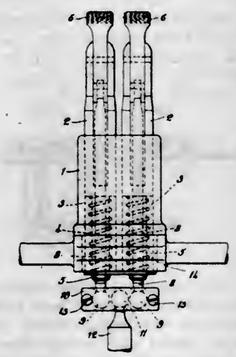
1. A variable change speed gearing comprising a longitudinally shiftable drive shaft, a sleeve with which one end of the said drive shaft engages, a plurality of pinions of different diameters loosely mounted on the drive shaft, the shaft also having means to successively engage and operatively connect the pinions thereto, a longitudinally shiftable driven shaft, a sleeve on the latter shaft and having a key recess, a key device carried by the said driven shaft and adapted to be engaged with said recess of the sleeve by a shifting movement of the latter shaft, and a plurality of pinions of different diameters mounted on the sleeve of the driven shaft and corresponding to the pinions on the drive shaft with which they are adapted to gear.

1,347,925. [WITHDRAWN.]

1,347,926. CULTIVATOR. CHARLES M. ANDERSEN, Denver, Colo. Filed Mar. 14, 1918. Serial No. 222,393. 4 Claims. (Cl. 97—34.)

1. A cultivator of the class described including a frame, a transverse shaft extending across the frame at the back thereof, toothed segments connected to the ends of the shaft and located at opposite sides of the frame exteriorly thereof and provided with spindles, traction wheels mounted on the spindles, a front centrally arranged guide wheel, a vertically movable shaft carrying the guide wheel, a lever connection for connecting the

vertically movable shaft with the transverse shaft for simultaneously raising or lowering the traction wheels when the transverse shaft is partially rotated, a drive shaft having pinions meshing with the toothed segments, an operating shaft, gearing for connecting the operating shaft with the drive shaft.

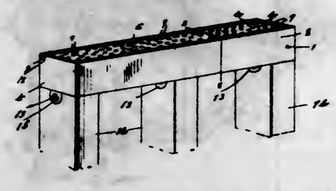


1,347,927. BRONZE POWDER AND THE PROCESS OF MAKING SAME. MAX BAER, New York, N. Y. Filed Jan. 20, 1919. Serial No. 271,974. 2 Claims. (Cl. 83—91.)

1. The process herein set forth for the making of bronze powders, which consists in cooling fluid metal in the presence of water for rendering it porous and subjecting it to a continued hammering in the presence of a liquid fat or oil, until a fluffy or flocculent powder results.

1,347,928. BRONZE POWDER. MAX BAER, New York, N. Y. Original application filed Jan. 20, 1919, Serial No. 271,974. Divided and this application filed Feb. 9, 1920. Serial No. 357,340. 6 Claims. (Cl. 134—76.)

6. A bronze powder made of metal granulated in the presence of water, and hammered to powdered form.



1,347,929. PULLING-OVER AND LIKE MACHINE. CHARLES MARTIN BAGSHAW, Leicester, England, assignor to The Gimson Shoe Machinery Company Limited, Leicester, England, a Corporation of Great Britain. Filed Nov. 1, 1919. Serial No. 335,010. 4 Claims. (Cl. 12—11.1.)

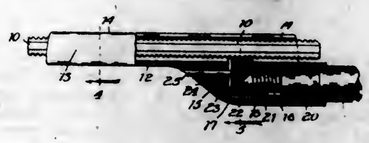
1. For a pulling-over machine, a pincer mechanism comprising two pincer devices, a carrier common to said

devices, and capable of rotary adjustment, said devices being capable of individual rotary adjustment within said carrier for the purpose of varying the angular relationship of the gripping jaws of said devices, an actuating member common to the two pincer devices, and a balancing member through which the pulling strain is transmitted from the actuating member to the two pincer devices.

1,347,930. ANTIVERMIN-PERCH. MARY F. BEEBE, Carthage, Ill. Filed Apr. 4, 1919. Serial No. 287,520. 1 Claim. (Cl. 119—25.)

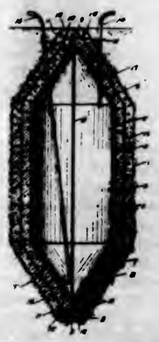
A poultry roost comprising an elongated substantially rectangular open receptacle having the inner surface of its upper edge rabbeted, a perforated cover adapted to rest on the shoulders, formed by said rabbeted portion, outwardly extending ears formed on the side edges of the cover at the rear edge thereof extending in direct alinement with the rear edge, one of said ears being longer than the other, the cover having inwardly extending slots formed therein adjacent the relatively long ear being formed relatively longer than the other slot, the end walls of the receptacle being provided with openings to receive the same, as and for the purpose specified.

1,347,931. TUBE-COMPRESSOR. JOHN J. BOWEN, Jr., Pensacola, Fla. Filed Aug. 15, 1919. Serial No. 317,773. 2 Claims. (Cl. 251—5.)



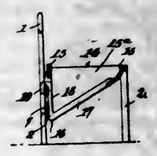
2. A device of the character specified, comprising a pair of gripping jaws spring pressed away from each other, means in connection with the jaws for clamping said jaws against movement away from each other, one of said jaws having an auxiliary gripping member adjustable toward and from the other jaw.

1,347,932. MEANS FOR AND PROCESS OF FILTERING PETROLEUM PRODUCTS. LEVI M. BOWMAN, Tulsa, Okla., assignor of one-half to W. A. Smith, Tulsa, Okla. Filed Sept. 25, 1918. Serial No. 255,662. 2 Claims. (Cl. 210—62.)



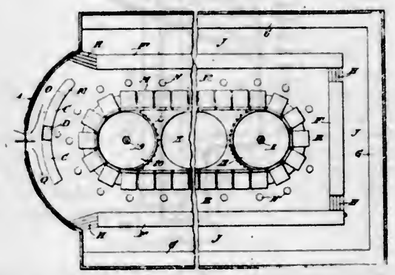
1. An oil filter comprising a rectangular frame formed of pipe sections constituting end bars and side bars communicating with the end bars, the frame being horizontally disposed, an oil supply pipe having communication with one side and one end bar, an oil discharge pipe having communication with the other side and end bars, a set of valves for each end bar positioned in spaced relation therein, a plurality of filtering chambers positioned vertically within the frame and each having an open ended tubular body, caps removably connected with the upper and lower ends of the body, conduits establishing communication between the ends of said filtering chambers arranged so as to connect the chambers in series and releasably connected with the caps, a conduit leading from the lower end of one of said chambers and communicating with one of the end bars between the valves thereof, and a conduit leading from the upper end of a second filter chamber and communicating with the second end bar between the valves thereof.

1,347,933. VETERINARY FLOAT. HAROLD M. BRIX, Chicago, Ill., assignor to Sharp & Smith, Chicago, Ill., a Corporation of Illinois. Filed Apr. 3, 1920. Serial No. 371,158. 2 Claims. (Cl. 32—35.)



1. In a veterinary float, a rasp section, a holder therefor, said holder comprising a back and provided with members overhanging the front of the rasp section and adapted to engage its upper surface, a handle for said holder, a pin loosely mounted in the back portion of the handle, and means operable on rotation of the handle in one direction to force said pin against the lower section of the rasp section and thereby wedge the latter against the overhanding members of the holder and when rotated in the opposite direction to permit the pin to fall out of contact with said rasp section.

1,347,934. AIR OR WATER PRESSURE TANK. JOSEPH F. BROWN, Wichita, Kans. Filed Oct. 1, 1919. Serial No. 327,809. 2 Claims. (Cl. 72—14.)

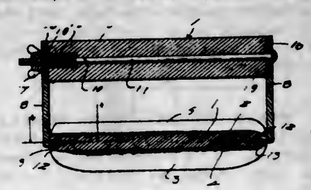


1. A tank comprising a lining constructed of comparatively thin material and having each end closed, an inlet pipe having communication with the interior of the lining, a rod extending approximately along the major axis of the tank and through said lining, a strainer carried by said rod adjacent its lower end, an outlet pipe having one end disposed within said strainer and its other end extending outwardly through the lining, a composition of material surrounding said lining, reinforcing means within the composition of material and having connection with the rod.

1,347,935. COMBINATION ANDIRON-GRATE. JOHN R. CAMPBELL, Sanford, N. C. Filed July 11, 1917. Serial No. 179,919. 2 Claims. (Cl. 126—298.)

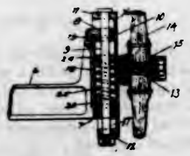
1. A device of the class described, comprising standards having an outstanding lug upon their rear face; a bar having upper and lower fingers at its ends, the fingers being received in the lug, the lower edge of the upper fingers being smooth, and the lower edge of the lower fingers having spaced seats in any of which the lower portion of the lug may be received for adjustment; and a fuel support detachably engaged with the bar.

1,347,936. STORE SELF-SERVICE SYSTEM. JAMES H. CARROLL, Atlanta, Ga., assignor to Liberty Self Service Corporation, Charlotte, N. C., a Corporation of North Carolina. Filed July 19, 1919. Serial No. 312,006. 6 Claims. (Cl. 186—1.)



1. In a self-service store, the combination of an entrance and exit device for admitting customers in single file, a cashier's desk in proximity to said entrance, series of stationary shelves adapted to carry goods available to the selection of the customer, a supervisor's platform at the center of the store, an endless conveyer carrying display racks, said endless conveyer inclosing the supervisor's platform, stools arranged opposite the consecutive display racks carried by the endless conveyer, and means for operating the endless conveyer.

1,347,937. VEHICLE-GUARD. ROBERT S. CLARY, Greensboro, N. C. Filed Jan. 26, 1920. Serial No. 354,095. 10 Claims. (Cl. 293—55.)



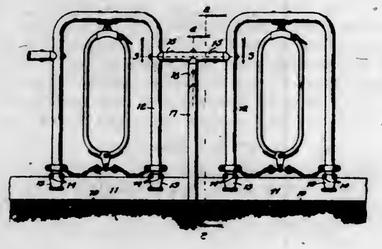
1. A guard for vehicles comprising front and rear transverse bumpers resiliently secured thereto, and parallel side-guards pivoted to the bumpers and extending inwardly therefrom in close proximity to the wheels and detachably secured at their free ends to the sides of the vehicle.

1,347,938. CONCRETE EDGING AND MARKING TOOL. HARRY F. CONNELLY, Macomb, Ill. Filed Sept. 16, 1919. Serial No. 324,092. 3 Claims. (Cl. 72—138.)

3. A cement finishing tool comprising a pair of arms, a body mounted in said arms and carrying cement finishing tools on its faces, a hand grip spacing apart said arms, means for connecting said hand grip and said arms, means carried by one of said arms for engagement with said body to retain the latter in one position within said arms, means carried by the connecting means for said hand grip and said arms to retain said arms in rigid position, and means for forcing apart said arms when released.

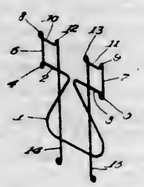
1,347,939. AUTOMOBILE SHOCK-ABSORBER. JAMES V. DAWSON, Oskaloosa, Iowa, assignor of one-half to James L. Mitchell, What Cheer, Iowa. Filed July 23, 1919. Serial No. 312,753. 2 Claims. (Cl. 280—96.2.)

1. In combination with an automobile axle having a yoke on the end thereof, a stud slidably mounted within said yoke, a housing fixedly engaging said stud, a spindle integrally attached to said housing, a second housing internally engaging said first-mentioned housing and slidably engaging said stud within said axle yoke, helical springs within said second housing, lugs integral with said outer housing engaging one end of said springs, an additional spring surrounding a portion of said stud and engaging said second housing and a lug on said first housing, and means for rotating said housings with said stud, substantially as and for the purpose described.



1,347,940. TREATMENT OF PEAT FOR FUEL AND APPARATUS THEREFOR. KENNETH ESSEX EDGEWORTH, Dublin, Ireland. Filed Sept. 12, 1918. Serial No. 253,847. 1 Claim. (Cl. 44—33.)

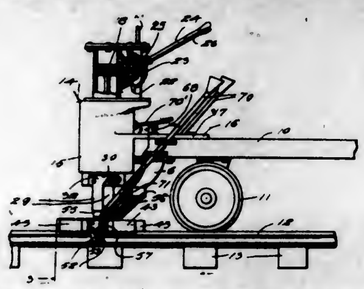
A method of extracting moisture from wet carbonized peat consisting in introducing the wet carbonized peat at



a temperature above 100° C. under pressure sufficient to prevent the formation of steam therein into a container having a moisture outlet, exerting pressure on the peat to force moisture through said outlet, and suddenly releasing the pressure in the container, whereby steam is generated in the mass of filtered peat to cause disintegration of the same.

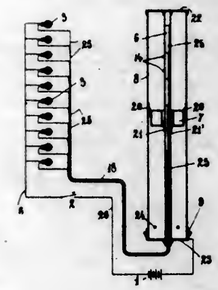
1,347,941. STALL CONSTRUCTION. HENRY L. FERRIS, Harvard, Ill., assignor to Hunt, Helm, Ferris & Company, Harvard, Ill., a Corporation of Illinois. Filed Feb. 16, 1920. Serial No. 359,070. 2 Claims. (Cl. 119—27.)

1. In an animal stall, in combination, a floor, a single vertical member secured to the floor, a transverse member mounted on the upper end of said vertical member, a partition member secured to the floor and to said vertical member, and stall-front forming members secured to said transverse member and said floor.



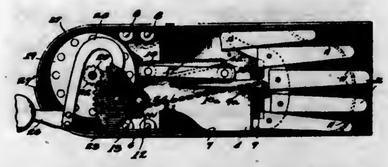
1,347,942. INDEX-CLIP. ARTHUR J. FORWARD, Ottawa, Ontario, Canada. Filed Sept. 22, 1917. Serial No. 192,758. 4 Claims. (Cl. 40—11.)

1. A clip having a card embracing portion and a sheet clamping portion so related as to hold the card and sheet in abutting relation in substantially the same plane, the clip being formed of a single piece of wire, one member of said clamping portion consisting of a loop whose end portions are curved to form card embracing portions, the free ends of such end portions extending downwardly to form a clamping member adapted to coöperate with the loop-clamping member, said free ends being adapted to be brought over the loop clamping member.



1,347,943. RAILROAD SPIKING-MACHINE. HOMER C. FORSITH, Waldo, Fla. Filed May 16, 1919. Serial No. 297,530. 26 Claims. (Cl. 104—17.)

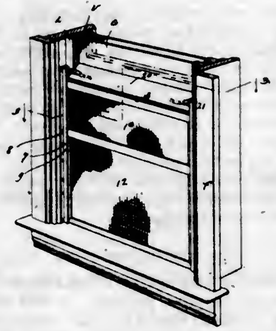
1. A spiking machine including guiding elements, a cylinder carried by the guiding elements, means to support said guiding elements and cylinder, a head disposed between said guiding elements and having connection with



said cylinder, and hammers carried by said head and adapted for driving spikes on opposite sides of a rail simultaneously.

1,347,944. APPARATUS FOR INDICATING THE LEVEL OF LIQUIDS AT DISTANCE. PIETRO GERVASONI and ALFREDO ZECCHINI, Turin, Italy, assignors to Giuseppe Ratti, Turin, Italy. Filed June 14, 1919. Serial No. 304,258. 4 Claims. (Cl. 200—84.)

1. A float-operated circuit controlling device for electric level indicators comprising a tubular body communicating with the tank containing the liquid the level of which is to be indicated and having an inner surface of material conductive of electricity; a bar mounted in said tubular body and carrying a plurality of separate sleeves said sleeves being conductive of electricity and being insulated from each other; and a float in said tubular body encircling said bar, said float having contact with said tubular body and with the separate sleeves carried by said bar to electrically bridge the inner surface of the tubular body and the separate sleeves carried by said bar.



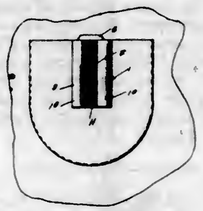
1,347,945. SIGNAL FOR MOTOR-VEHICLES. EUCLID P. GOODCHILD, Spokane, Wash. Filed Jan. 16, 1920. Serial No. 351,849. 5 Claims. (Cl. 116—50.)

1. A device of the character specified, comprising a casing having one end open, a plate mounted to move longitudinally of the casing toward and from the open end, a bar mounted to move on the plate and carrying a series of fingers, the plate having guiding means for the

fingers to extend the same laterally when they are extended longitudinally beyond the plate, normally active means for moving the bar toward the open end of the casing, normally active means for moving the plate toward the open end of the casing, and manually controlled means for returning the parts to normal position, said manually controlled means comprising a gear segment having a handle for swinging the same, a drum having a pinion engaged by the gear segment, a flexible member winding on the drum at one end and connected with the bar at the other end.

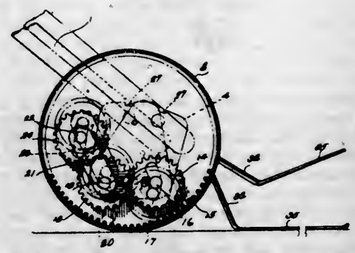
1,347,946. WINDOW-SCREEN. JACOB JOSEPH GREENWALD, Sheboygan, Wis. Filed Aug. 30, 1919. Serial No. 320,803. 3 Claims. (Cl. 156—14.)

3. The herein described fly-guard structure for window screens, the same comprising a frame section adapted to be mounted in the screen guides above the screen proper, a lip held at its lower edge within said section and adapted to be deflected out of the plane of the screen, and yielding means for holding it so deflected with its free edge in contact with the glass of the adjacent sash.



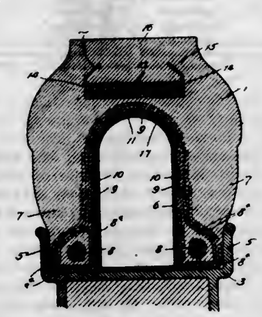
1,347,947. ARTIFICIAL LIMB. ELBRIDGE G. HADEN, Charlottesville, Va. Filed Mar. 25, 1919. Serial No. 285,066. 13 Claims. (Cl. 3—2.)

1. A framework for an artificial leg and foot comprising a foot proper, a bottom or sole secured thereto with one end protruding beyond the foot proper, front, rear and side strips connected with the foot; the extreme lower end of the front strip in position to reinforce the protruding end of the sole.



1,347,948. MATCH-SCRATCHER. WILLIAM PENN HALL, Cedar Falls, N. C. Filed Aug. 15, 1919. Serial No. 317,807. 1 Claim. (Cl. 51—20.)

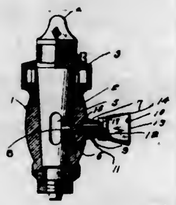
A match scratcher comprising a plate having one face thereof roughened, a depending resilient arm formed on the upper edge of the plate, a guide member detachably associated with said plate including a body member, an inwardly projecting overlying resilient dog formed on each longitudinal edge of said member and arranged to



engage the roughened face of the plate to hold the guide member against accidental displacement and to guide the head of the match during the scratching movement thereof, as and for the purpose specified.

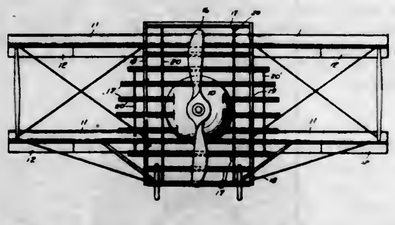
1,347,949. CARPET-BEATER. JOHN E. HANSON, St. Paul, Minn. Filed Oct. 10, 1918. Serial No. 257,611. 5 Claims. (Cl. 15—8.)

2. In a carpet beater, the combination, of a plurality of pivotally mounted beating elements, supporting wheels, a crank shaft, and means operatively connecting said supporting wheels through said crank shaft for rotating the crank shaft in a uniform direction upon rotation of said supporting wheels in either a forward or backward direction, and means for locking said motion transmitting means in a neutral position to permit rotation of said wheels without imparting rotation to said crank shaft.



1,347,950. PNEUMATIC TIRE. GEORGE HOFMANN, Chicago, Ill., assignor to Hofmann-Morgan Rubber Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 13, 1917. Serial No. 148,310. 3 Claims. (Cl. 152—10.)

3. A pneumatic tire comprising a casing containing a comparatively narrow vertically elongated channel, rein-

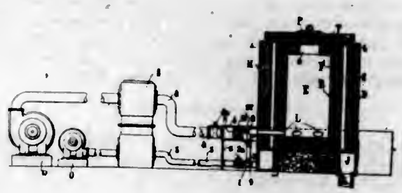


forcing material in the walls of the casing extending circumferentially thereof and surrounding said channel, the said reinforcement being of relatively greater thickness adjacent the sides of the channel and of diminishing thickness adjacent the tread end thereof, and a second reinforcement in the casing closely adjacent that portion of said first reinforcement surrounding the tread end of said channel and comprising a plurality of layers with certain layers thereof having their free edges turned at an angle to the others to form annular ring portions inclosing the edges of the other layers of such reinforcement, and a traction surface on said casing of a width not less than the width of said channel.

1,347,951. STOP AND WASTE COCK PLUG. HENRY C. HORMANN, Louisville, Ky. Filed Dec. 27, 1918. Serial No. 268,441. 1 Claim. (Cl. 251—43.)

A device of the character set forth including a body of a valve having a laterally extending draining nipple provided with internal screw threads, a screw threaded shank threaded into said nipple, a valve seat formed within the nipple, a pointed end formed on said shank and adapted to engage the valve seat, an annular collar formed on the other end of the shank and adapted to abut the outer end of the nipple to coöperate with the pointed end of the shank and valve seat in sealing the nipple, said shank having a groove extending from the pointed end to the collar to permit the escape of fluid from the nipple when the pointed end is unseated and the collar disengaged from the nipple, said collar being adapted to deflect the fluid laterally from the groove, and a handle formed on said collar.

1,347,952. AEROPLANE. BUNT HOOD, Columbus, Ga. Filed Feb. 13, 1919. Serial No. 276,724. 4 Claims. (Cl. 244—29.)

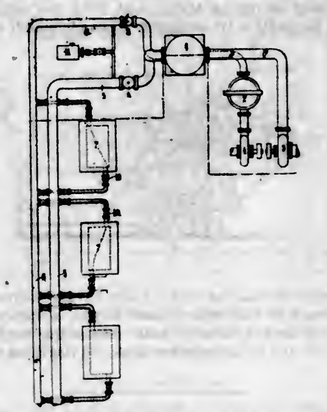


1. In an aeroplane, the combination of a body equipped with substantially horizontal transverse wings, and a propeller at the forward end of the body, of longitudinally spaced-apart groups of supplemental planes disposed with the planes superposed in spaced relation in each group, the said supplemental planes having axially pivoted opposite ends lying between the said transverse wings of the body, and means connecting together the pivoted ends independently in each group for simultaneously operating the planes of the respective group and adapted for independently controlling the groups of pivoted ends of the planes of the different groups

1,347,953. RESILIENT TIRE. JAMES A. HORNE, Newark, N. J. Filed Feb. 18, 1919. Serial No. 277,762. 7 Claims. (Cl. 152—8.)

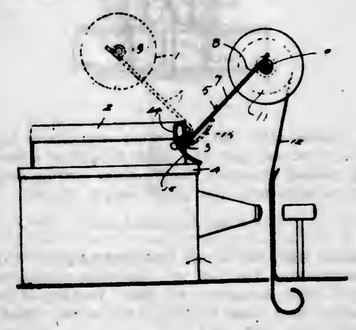
3. The combination with a wheel including a felly, of a rim yieldably supported in spaced relation to the felly, a cushioning member resting on the rim, a tire casing completely housing the cushioning member and bearing against the rim, a clamping member formed of mating sections having their outer portions provided with angular extensions, the inner faces of which are roughened for engagement with the tire casing and their inner portions provided with depending perforated ears, and adjusting screws extending through the perforations of said ears for drawing the sections of the clamping member together to grip the casing on the rim.

1,347,954. GAS-FURNACE-REGULATING SYSTEM. ALEXANDER CONSTANTINE IONIDES, Jr., and SIDNEY VICTOR COOKE, London, England; said Cooke assignor to said Ionides. Filed Dec. 19, 1916. Serial No. 137,885. 11 Claims. (Cl. 158—7.)



1. In combination in a gas furnace regulating system means for downwardly displacing the products of combustion to automatically maintain a very slight pressure in a furnace a sensitive regulator responsive to minute pressure differences for maintaining constant a practically exact relationship between the pressures of the two elastic fluid constituents of a combustible mixture supplied at low pressure to said furnace and means for mixing said constituents in desired proportions immediately preceding their free inlet to the furnace chamber.

1,347,955. GASEOUS COMBUSTION. ALEXANDER CONSTANTINE IONIDES, Jr., London, England. Filed Aug. 1, 1918. Serial No. 247,775. 17 Claims. (Cl. 158—119.)



3. A system for supplying two gaseous fluids, such as gas and air, to any number of combustion appliances comprising in combination a supply of one of said fluids, say for example gas; a gas governor to prevent a predetermined pressure being exceeded, a supply of the other fluid such as air at a pressure always in excess of the said gas, a pressure balancing device by which said supplies are further controlled to maintain a definite relationship between their pressures, means for compensating for the variations in the quality of the gas by further adjustment of the controlled supply of at least one of the

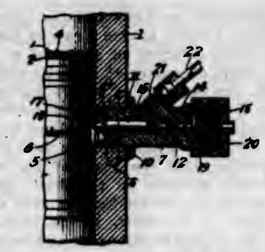
fluids and mixing means having orifices controlled by members not easily afterward disturbed, which are primarily adjusted in accordance with the pressures to give

a mixture which is correctly proportioned prior to reaching the ignition zone of the combustion appliances.

1,347,956. REEL-HOLDER FOR MOVING-PICTURE MACHINES. JOHN HENRY KOCHOBO, McKeesport, Pa. Filed Mar. 29, 1918. Serial No. 225,491. 3 Claims. (Cl. 242—106.)

1. In a device of the class described, the combination with a body and a reel, of a support for the reel constructed of a single strand of wire bent to form shaft supporting eyes and engaging portions for engagement with a body to hold the reel in an operative position above and in advance of the body and in an inoperative position over the body.

1,347,957. NECKTIE-SUPPORT. HARUICHI KOHIROGAWA, Portland, Oreg. Filed Feb. 26, 1919. Serial No. 279,276. 3 Claims. (Cl. 2—84.)

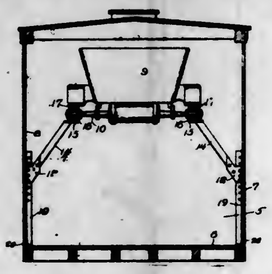


1. A neck tie support comprising a resilient member around which a tie is folded, having two legs bent inwardly to overlap each other and formed with openings, whereby when a band is passed through the openings in the overlapping ends, said ends will grip and hold the band.

1,347,958. STILT. ROBERT JAMES LYNCH, Tamaqua, Pa. Filed Mar. 27, 1920. Serial No. 369,318. 4 Claims. (Cl. 135—53.2.)

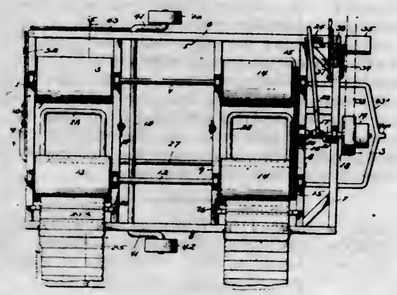
2. In an adjustable stilt the combination of a standard having one of its faces provided with a plurality of downwardly extending transverse recesses; a step formed of sheet metal vertically movable upon the standard, and having side wings in parallel spaced relation, said side wings having their upper straight edges provided with inturned meeting flanges along a portion thereof, said meeting flanges having a series of transverse corrugations and interlockingly engageable connecting means; an inclined body portion joining the side wings and having at its lower end a reinforced bearing edge and at its upper end an angular extension projecting above the upper edge of the side wings, said angular extension having at its central portion a vertical inwardly extending reinforcing rib; and a transverse bolt connecting the free ends of the side wings adjacent their upper edges for engagement with the transverse recesses of the standard.

1,347,959. AUTOMATIC LUBRICATING SYSTEM FOR INTERNAL-COMBUSTION-ENGINE PISTONS. OWEN J. MCGANN, Carrollton, Ohio. Filed May 31, 1919. Serial No. 301,074. 3 Claims. (Cl. 184—18.)



1. The combination with an internal combustion engine cylinder and piston, which latter is provided with a cam slot in its face, of an oiling device attached to the cylinder and having an oil duct communicating with the interior thereof, a valve for closing said duct, a cam operable against the face of the piston to maintain said valve closed, and means for projecting the cam into the cam slot to open the valve when the slot is alined with the cam.

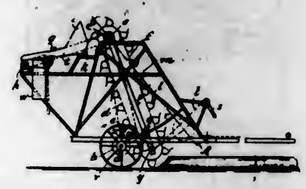
1,347,960. ART OF STORING VEHICLES. CHARLES L. MICHOD, Morgan Park, Ill. Filed Mar. 3, 1920. Serial No. 363,061. 7 Claims. (Cl. 105—368.)



1. The combination with a freight-car, of a vehicle therein, and a supporting structure for the vehicle formed

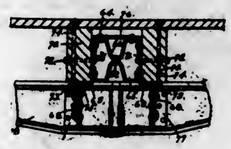
of a brace member operatively engaging said vehicle and inclining downwardly and laterally therefrom and in a direction lengthwise of the vehicle, said brace member being held at its lower end, by the car, against displacement, and a second brace member adjacent said first-referred-to

brace member and operatively engaging the vehicle and inclining downwardly and laterally therefrom and in a direction lengthwise of the vehicle opposite that in which said first-referred-to brace member extends, the outer end of said second brace member engaging the adjacent wall of the car at a point above the car-floor.



1,347,961. POWER-TRANSMISSION MECHANISM. JOHN IVAN MOORE, Butler, Mo. Filed Apr. 28, 1919. Serial No. 293,196. 3 Claims. (Cl. 74—106.)

1. In a transmission mechanism of the class described, the combination of a frame having a pair of shafts mounted thereon, a roller mounted on each end of each shaft and providing pairs of rollers at opposite extremities of the mechanism, the one pair of rollers having gears at the outer ends thereof on the shafts, a centrally-located power transmitting shaft carrying pulleys on the outer end thereof, a main power transmitting gear between and continually meshing with the gears of the one pair of rollers and loosely mounted on the power transmitting shaft, clutch means for connecting the said main power transmitting gear to its shaft, means operatively disposed between the rollers to disengage and raise the drive wheels of the motor vehicle relatively to the rollers, and means for rendering the entire mechanism readily portable.



1,347,962. MACHINE FOR UNEARTHING AND GATHERING ROOTS AND THE LIKE. ANDRÉ MÜLBERTZ, Copenhagen, Denmark. Filed June 27, 1916. Serial No. 106,233. 1 Claim. (Cl. 55—51.)

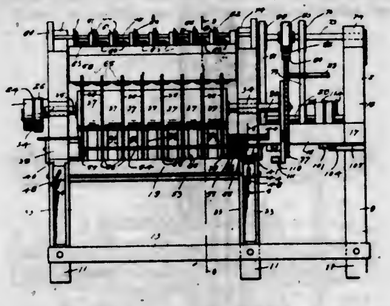
A root harvester comprising a main frame, a shaft mounted in said frame and having supporting wheels and a gear, a second shaft mounted on said frame and having a gear engaging the first named gear and also having a sprocket wheel, a third shaft mounted at an elevated point on said frame, said third shaft having sprocket wheels one of which is connected by an endless sprocket chain with the first named sprocket wheel, a swinging frame mounted on said third shaft, an endless digging device mounted in said swinging frame, and means to adjust said swinging frame and hold the same at any desired inclination, a swinging sieve on which said drag-

ging device discharges, and a shaft having means to swing said sieve, said last named shaft having a sprocket wheel, and an endless sprocket chain connecting said sprocket wheel with the other sprocket wheel of the third mentioned shaft.

1,347,963. RAILWAY-CAR UNDERFRAME. WALTER P. MURPHY, Chicago, Ill. Filed Aug. 3, 1916. Serial No. 112,889. 24 Claims. (Cl. 105—420.)

1. In combination with the other elements of the under frame of a railway car, of a draft formed of a steel plate having pressed therein a longitudinal corrugation which extends substantially the entire length thereof.

1,347,964. RAILWAY-CAR UNDERFRAME. WALTER P. MURPHY, New York, N. Y. Original application filed Aug. 3, 1916, Serial No. 112,889. Divided and this application filed Nov. 7, 1917. Serial No. 200,703. 12 Claims. (Cl. 105—420.)

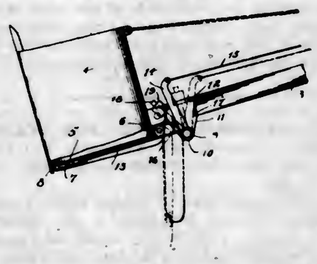


1. In combination with the center sills of a railway car, a pair of sheet metal draft arms longitudinally corrugated and arranged under said center sills and formed with inwardly projecting offsets which overlap and are secured to the inner sides of the center sills, said offsets being formed with longitudinal corrugations.

1,347,965. COMBINED GRINDER AND GUMMER MACHINE. GEORGE PIERCE NABORS, Argenta, Ark. Filed June 8, 1918. Serial No. 239,070. 11 Claims. (Cl. 76—40.)

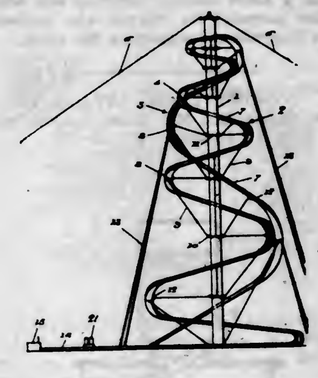
1. In a gumming and grinding machine, a saw mandrel support, a mandrel mounted in the support, a plurality of saws carried by the mandrel, grinding means positioned

in the rear of the mandrel, gumming means positioned above the mandrels, means for operating the grinding and



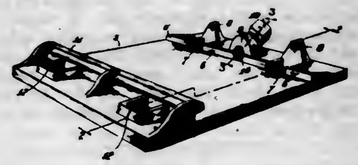
gumming means, and means for moving the mandrel support so as to bring the saws into and out of engagement with the grinding and gumming means.

1,347,966. SHADE-FIXTURE. WILLIAM MCCORMICK NEALE, Greensboro, N. C. Filed Aug. 14, 1919. Serial No. 317,528. 5 Claims. (Cl. 156—28.)



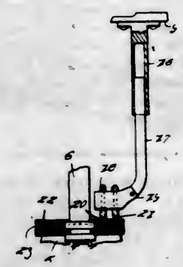
5. A shade roller having a cord winding thereon, a lever adapted to be pivoted adjacent to the reel to a fixed support and supporting that end of the roller for rotation, the cord being connected with the lever to swing the roller upward, the weight of the roller swinging the lever downward, and a brake controlled by the downward swinging of the roller.

1,347,967. BUCKET-LATCH FOR SHOVELS. WILLIAM J. NEWMAN, Chicago, Ill. Filed Aug. 30, 1918. Serial No. 252,053. 3 Claims. (Cl. 214—146.)



1. The combination with a steam shovel adapted for filling wagons or trucks and having the usual dipper and dipper stick, of a shaft mounted transversely of the stick, a chain from said shaft to the latch bolt for withdrawing the bolt, an upwardly extending arm connected with said shaft, an operating rope connected with said arm, and stops for limiting the movement of said arm to prevent the free end of the arm from swinging below the shaft.

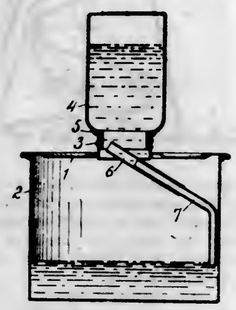
1,347,968. SPIRAL-GLIDE AMUSEMENT DEVICE. GEORGE W. O'DOIE, Havana, Ill. Filed Nov. 17, 1919. Serial No. 338,545. 4 Claims. (Cl. 104—56.)



1. An amusement device comprising a central mast, spiral ascending and descending tracks surrounding one another and the mast, and spaced from said mast, and braces connecting the mast and tracks to support the tracks from the mast, said braces being detachable for separating the mast and tracks.

1,347,969. RAIL-ANCHOR TIE-PLATE. WARREN M. OSBORN, Chicago, Ill., assignor to Chicago Malleable Castings Company, Chicago, Ill., a Corporation of Illinois. Filed June 5, 1920. Serial No. 386,855. 3 Claims. (Cl. 238—304.)

1. A device of the class described comprising a body having spike-holes, an overhanging flange for one side of a rail base, a lug opposite the flange and extending above the body and having a screw-threaded passage terminating in line with the upper edge of the corresponding side of the rail base, and a set screw in the passage having its inner end abutting against and formed with a cutting-edge to bite into the upper edge of the rail base.



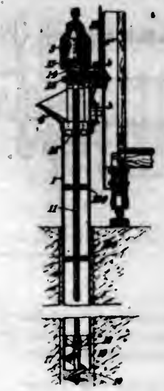
1,347,970. WINDMILL-OPERATED GENERATOR. FRANK A. OVERSTREET, Fort Sumner, N. Mex. Filed Oct. 7, 1916. Serial No. 124,323. 1 Claim. (Cl. 171—322.)

A contact device comprising a support, a pair of annular contact elements insulated from each other and

mounted one above the other upon the support, vertically disposed brushes bearing at their lower ends upon the upper surfaces of the contact elements, an arm carrying the brushes, a sleeve slidably receiving said arm and a base member journaled for rotation and disposed above the contact elements and supporting the sleeve.

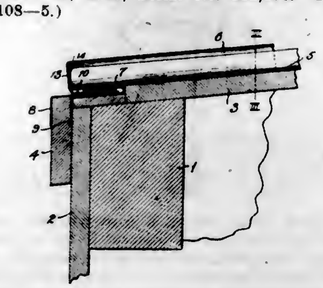
1,347,971. COOKING-VESSEL ATTACHMENT. HARVEY RAY, Kansas City, Mo. Filed Aug. 22, 1918. Serial No. 250,913. 2 Claims. (Cl. 53—1.)

2. In a cooking utensil, a kettle cover, means carried thereby for releasably closing the mouth of an inverted jar or similar liquid container, and a conductor adapted to communicate with said mouth and to extend into a kettle supporting said cover, said conductor comprising upper and lower tubular members, the upper member being inclined and the lower member being angular in form and rotatable in the upper member to vary the height of the lower end of the lower member.



1,347,972. HAND-TOOL. VALDEMAR F. REICH, Pittsburgh, Pa. Filed Apr. 4, 1919. Serial No. 287,585. 4 Claims. (Cl. 49—52.)

4. In a hand tool, the combination of an elongated body including a head and handle, said head being provided with means for removably attaching a tool to it, said handle being provided with a longitudinal bore open at the outer end of the handle, a tool magazine longitudinally slidable but non-rotatable in said bore, and a cap rotatably mounted on the outer end of said magazine, said cap having screw thread engagement with the outer end of said handle.

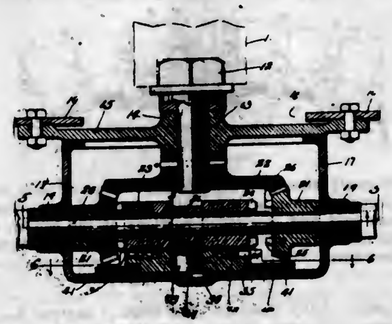


1,347,973. CONSTRUCTION OF FERROCONCRETE PILES IN SITU. ALEXANDER GEORGIEVITCH ROTINOFF, London, England. Filed Nov. 13, 1919. Serial No. 337,877. 11 Claims. (Cl. 25—1.)

5. An apparatus for making a concrete pile or column, comprising a reservoir-tube, a feed-worm therein and operatively connected thereto, means to rotate the feed-worm so that it gradually forces itself and said tube away from the base of the pile or column by its reaction with the surface of the concrete as the latter becomes

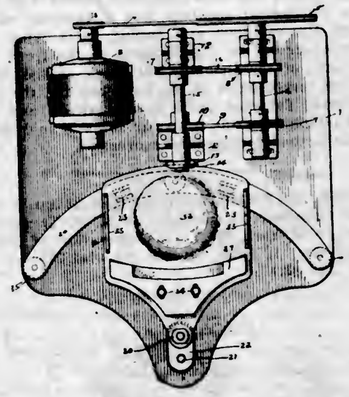
compacted, and means for transmitting blows through the feed-worm to the laid concrete to compact it.

1,347,974. CAR-ROOF. THOMAS NATHAN RUSSELL, Chicago, Ill., assignor to Chicago-Cleveland Car Roofing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 22, 1919, Serial No. 332,476. 11 Claims. (Cl. 108—5.)



1. In a car roof, the combination of a roof frame, roof sheets having upstanding hooked side flanges, seam caps having inturned hooked flanges loosely interengaged with said flanges of the roof sheets, means carried entirely by the seam caps for closing the eaves ends thereof and for holding the roof sheets from outward sliding, a connection holding together the ridge ends of the seam caps, and interengaging hook elements on the roof frame and on the eaves ends of the roof sheets whereby the roof sheets and seam caps are held from upward movement.

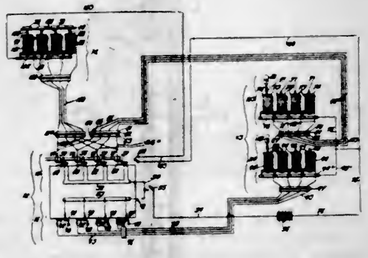
1,347,975. REVERSING-GEAR FOR WASHING-MACHINES. RUDOLPH F. SETTLAGE, St. Louis, Mo. Filed Aug. 29, 1919. Serial No. 320,563. 10 Claims. (Cl. 74—50.)



1. In a reversing gear, a driving shaft, a pair of pinions loosely mounted thereupon, a gear wheel meshing with said pinions, a shaft upon which said gear wheel is carried, a member mounted to slide lengthwise upon and rotate with the driving shaft between the pinions thereon, the ends of which member are adapted to engage said pinions so as to drive the same, a cam, means associated therewith for effecting a movement of the cam in a direction substantially parallel with the driving shaft, and driving connections between said cam and the member that is mounted on the driving shaft between the pinions.

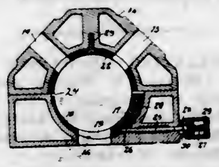
5. In a reversing gear, a driving shaft, a pair of pinions loosely mounted thereon, a gear wheel having driving connections with said pinions, a shaft on which said gear wheel is carried, a clutch member carried by the

driving shaft and adapted to engage the pinions thereon, a ratchet wheel associated and movable with said clutch member, and means on said clutch member for imparting intermittent rotary movement to said ratchet wheel.



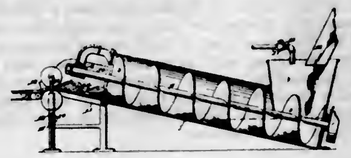
1,347,976. TRIMMING-MACHINE. HORACE D. STEVENS, Summit county, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 8, 1917. Serial No. 185,157. 4 Claims. (Cl. 164—63.)

1. A machine for trimming the edges of blow out patches having a central concave portion, an oscillating work table, a knife located at one edge of said table, a guide at the rear of said table opposite the knife, and a bulbed formation on the table adapted to fit within and support the central concave portion of the patch.



1,347,977. MUSICAL INSTRUMENT. JOHN WEBER, Philadelphia, Pa. Filed Apr. 7, 1919. Serial No. 288,395. 2 Claims. (Cl. 84—81.)

1. The combination of two wind operated instruments each having a melody and an accompaniment section respectively provided with valves; means for operatively connecting in combination valves of each of the accompaniment sections whereby harmonic combinations of tones are produced simultaneously in said accompaniment sections of each instrument when said means is actuated; one of said instruments having keys for operating the melody section valves and keys for operating said combination connecting means of the accompaniment valves; and automatically operative means for opening the melody section valves of the other of said instruments when the first mentioned keys are operated

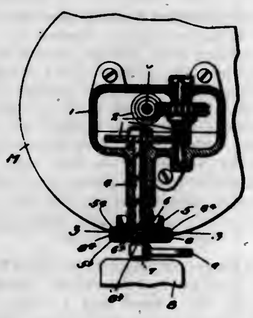


and for operating the combination connecting means of valves of the accompaniment section of said other instrument when said first mentioned keys are operated; substantially as described.

1,347,978. ROTARY VALVE. RUDOLPH WEHA, New York, N. Y. Filed May 2, 1919. Serial No. 294,232. 3 Claims. (Cl. 123—190.)

2. In an internal combustion engine of the rotary valve type, a valve casing including a substantially semi-cylindrical lining member, said member having its inner surface concentric with the valve and its external surface eccentric whereby one edge of said member is materially thicker than the opposite edge, a rotary valve engaging with said member and having a normal rotation with its surface engaging with said lining member tending to move the latter toward its thicker or base edge to increase clearance, and resilient means normally tending to move said lining member toward its narrow edge to decrease clearance.

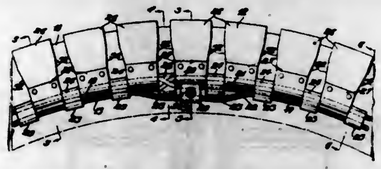
1,347,979. METHOD OF TREATING STRAW AND THE LIKE FOR MAKING PAPER-PULP. ERNEST E. WERNER, St. Louis, Mo. Filed May 5, 1919. Serial No. 294,780. 11 Claims. (Cl. 92—7.)



1. The method of treating straw, and the like, for producing paper pulp, which consists in subjecting the material to the action of an excess of an alkaline solution and thereafter, and before further treatment, expressing excess solution to reduce the alkalinity of the material to a given degree.

1,347,980. SECTIONAL CHIMNEY. FRANK D. WHITE, Akron, Ohio. Filed Apr. 22, 1918. Serial No. 229,924. 2 Claims. (Cl. 72—94.)

2. A chimney composed of surmounting inter-engaging sections, the cross-sectional dimensions of said sections being uniform but their composition variable in different portions of the chimney, whereby sections of requisite heat resisting and load resisting properties may be assembled according to the requirements of different portions of the chimney.

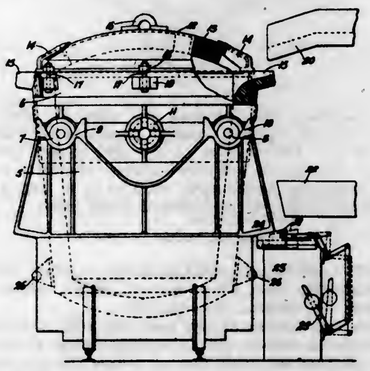


1,347,981. OSCILLATING MECHANISM FOR ELECTRIC FANS. WILLIAM G. WINTER and HERBERT I. FINCH, St. Louis, Mo., assignors to The Emerson Electric Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed May 7, 1919. Serial No. 295,341. 8 Claims. (Cl. 74—14.)

1. In an oscillating mechanism for fans, a rotary member, means for driving the same, an adjustable member carried in the lower end of said rotary member, means pivotally connecting said adjustable member with a stationary support, a housing inclosing the lower end of said rotary member and folded thereover, and adapted to move said adjustable member toward or away from the axis of said rotary member.

1,347,982. TIRE-ARMOR. PETER V. YOUEL, Philadelphia, Pa. Filed Apr. 14, 1919. Serial No. 289,903. 2 Claims. (Cl. 152—16.)

1. A device of the character described including a number of flexible members having loops formed at their ends; means for securing said members across the tread of a tire and including a cable; bands interposed between said members and having portions positioned closer to the axis of the tire than said loops and other portions in alinement with said loops, said cable having a plurality of complete coils, one of said coils of the cable extending

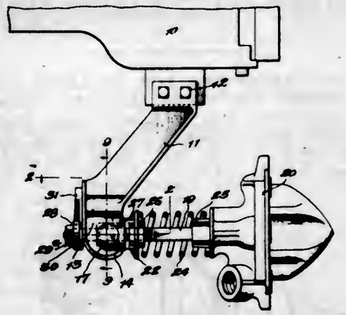


continuously through the alined portions of said band and loops, another of said coils extending continuously through said first mentioned portions of the bands; and means for fastening the ends of the cable; substantially as described.

1,347,983. SOFT-COLLAR HOLDER. ARNOLD L. ANDERSON, Attleboro, Mass. Filed Mar. 19, 1920. Serial No. 367,163. 4 Claims. (Cl. 24—81.)

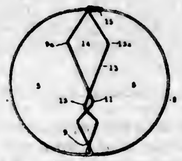
1. In a soft collar holder, a front bar having its ends bent inwardly and curved outwardly and then bent substantially parallel to the body of the bar and finally bent at right angles and outwardly and formed with approximately rectangular openings, and a clamping bar passed through the openings and having parts lying opposite to and engaging the curved parts of the front bar, the outer ends of the clamping bar being curved outwardly from the curved parts of the front bar and the clamping bar having flattened parts lying between and opposite to the terminals of the front bar so as to hold the clamping bar against longitudinal movement.

1,347,984. HOT-METAL LADLE-CAR. CARL P. ASTROM, East Orange, N. J., assignor to M. H. Treadwell Company, New York, N. Y., a Corporation of New York. Filed Dec. 1, 1919. Serial No. 341,780. 6 Claims. (Cl. 22—83.)



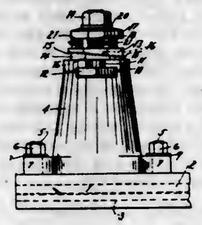
1. In a hot metal car, a ladle for hot metal and a cover composed of a ring having a pouring recess, a refractory lining supported by the ring, and a plate top, the ring recess permitting expansion and contraction with temperature changes without loosening the lining.

1,347,985. BEARING FOR CLUTCH AND PULLEY MECHANISM. MEYER AXILROD, New York, N. Y., assignor to Safety Machinery Corporation, New York, N. Y., a Corporation of New York. Filed May 18, 1918. Serial No. 235,268. 2 Claims. (Cl. 64—17.)



1. In combination, a pulley comprising a plurality of annular plates arranged in parallel relation to each other, each of the said plates being provided with a peripheral groove, means for securing the said plates together in spaced relation to each other, a shaft, a ball-bearing secured to said shaft and annular plate members intermediate the said ball-bearing and the said annular plates, said members being secured to said annular plates and connecting the latter with said ball bearing.

1,347,986. AUTOMATIC TRAIN-PIPE COUPLING. MARTIN A. BARBER, Cleveland, Ohio, assignor to The American Automatic Connector Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 8, 1918. Serial No. 227,330. 22 Claims. (Cl. 285—58.)

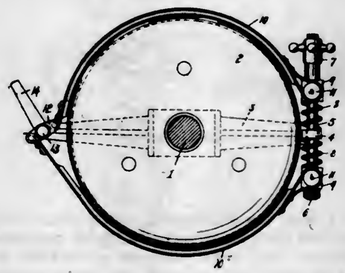


1. In an automatic train pipe coupling, the combination with the supporting bracket and coupler head, said bracket having two spaced arms depending from its lower end formed with alined slots extending inwardly from one edge; of a pivot block having trunnions arranged in said slots, a spring seat pivoted on said block for rocking movement about an axis perpendicular to the axis of said trunnions and a spring interposed between said seat and head.

1,347,987. HAIR-SUPPORT. BLANCHE E. BEADLE, Springfield, Mass. Filed Apr. 8, 1919. Serial No. 288,615. 6 Claims. (Cl. 132—23.)

1. A hair form consisting of a frame formed wholly of companion hair clasping jaws flexibly connected to each other to open the width of the frame.

1,347,988. TOOL-POST. PHILIAS M. BEDARD, Springfield, Mass. Filed Nov. 29, 1919. Serial No. 341,442. 4 Claims. (Cl. 82—37.)



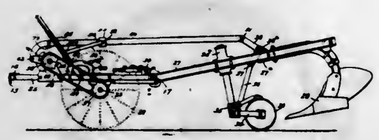
2. The combination, in a tool-post, with a slotted support, of a bolt having a head which is receivable in the slot in said support, slotted tool-supporting members on said bolt, the contiguous faces of said members being inclined and provided with teeth, and tool-clamping means also on said bolt.

1,347,989. CONNECTOR FOR BED OR SEAT SPRING STRUCTURES. CHARLES S. BURTON, Oak Park, Ill. Filed Nov. 3, 1919. Serial No. 335,541. 3 Claims. (Cl. 5—29.)

1. In combination with two members of a spring structure to be connected, a connector comprising a two-part hook device, each part having at one end a hook for engaging one of said members, and at the other end an eye for engaging the other member, said eyes being open for entering onto the member which they engage by hooking movement in opposite directions, said two parts being adapted to interlock with each other in their said opposite hooking movement.

1,347,990. VEHICLE-BRAKE. GEORGE M. CARTER, Findlay, Ohio, assignor of one-half to Ralph H. Rosenberg. Filed May 16, 1919. Serial No. 297,598. 1 Claim. (Cl. 188—77.)

In a brake of the class described, a rotatable brake drum, a stationary anchorage member having a part at the periphery of the drum, a rod projected loosely through the anchorage member for longitudinal movements relative thereto in a plane tangential to the drum periphery, a pair of blocks carried by the rod one at each side of the anchorage member for movements lengthwise of the rod, a stop for each block at the respective end of the



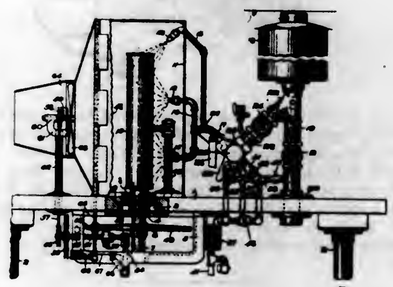
rod to limit the outward movements of the blocks, one of the stops comprising a nut member adjustable on the rod to vary the normal distance between the blocks, each of said blocks having trunnions projecting from opposite sides thereof, a coiled compression spring encircling the rod between the anchor member and each block to yieldingly equalize the position of the rod with respect to the anchor member, brake bands extending in opposite directions around the drum periphery and each having ears connected to the trunnions of a respective block, and means carried by the anchor member at the opposite side of the drum to the rod, said means connecting the opposite ends of the brake bands and operable to effect a contraction or expansion of the bands.

1,347,991. GATE-LATCH OR THE LIKE. JOSEPH B. CLAY, Cedar Falls, Iowa. Filed Apr. 1, 1916. Serial No. 88,220. 12 Claims. (Cl. 292—216.)

1. A gate latch of the kind described comprising a base plate provided with a projecting horizontal flange, a substantially U-shaped latch member arranged below and pivotally carried by said flange, a pair of pins arranged at each side of said flange and movable downwardly therethrough in the path of said latch member, means on said pins for limiting the upward movement thereof, said U-shaped member having shoulders arranged to normally abut against the projecting ends of said pins below the base plate flange.

1,347,992. TRACTOR-PLOW, FRANK E. DAVIS and WILLIAM W. CAMERON, La Crosse, Wis., assignors to La Crosse Plow Co., La Crosse, Wis., a Corporation of Wisconsin. Filed Apr. 18, 1913. Serial No. 761,928. 41 Claims. (Cl. 97—70.)

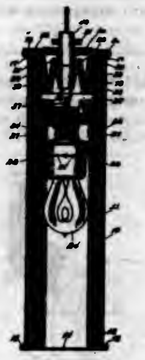
22. In a plow, the combination with a frame, carrying-wheels, a plow-carrying structure, a lifting connection for said structure, and power operated mechanism for operating said connection to raise the structure and for imparting an initial movement to said connection, to release the structure for fall by gravity.



32. In a plow, the combination with a frame, carrying-wheels and a plow beam, of a self-locking lifting linkage, power-operated mechanism carried by the frame for shifting the linkage to a position in which it will be self-locking to hold the beam raised, means for locking the linkage to hold the structure raised before it reaches the self-locking position, the linkage permitting the beam to drop by gravity when the locking-means is released, and means for rendering the locking-means operative and inoperative to hold the linkage.

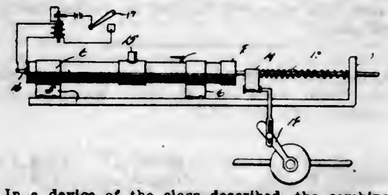
1,347,993. ARTICULATED EFFIGY. HERBERT M. DAWLEY, Chatham, N. J. Filed Feb. 26, 1920. Serial No. 361,390. 15 Claims. (Cl. 35—16.)

1. An effigy comprising an internal structure consisting of an articulated skeleton frame, a padding in which said frame is embedded, and means for retaining said padding in place; and an external body member of elastic material superimposed on said internal structure, said body member being shaped to conform to the external surface contours of the creature represented by the effigy.



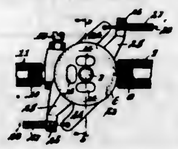
1,347,994. MECHANISM FOR APPLYING COATING TO SHELLS AND OTHER ARTICLES. HERBERT W. DAY, Wollaston, Mass., assignor to Spray Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed June 22, 1917. Serial No. 176,317. 16 Claims. (Cl. 91—44.)

1. Mechanism for applying coating comprising an article support, coating means, an inclosing casing for said article support and having a closure, driving means for the article support, and means operatively connected to said closure to impart relative movement to said coating means and the article support.



1,347,995. BED-WARMING DEVICE. NATHANIEL WALKER DENDY, Asheville, N. C. Filed Oct. 4, 1919. Serial No. 328,428. 2 Claims. (Cl. 219—45.)

1. An electric bed warmer comprising a double walled casing having a removable closure at one end thereof, a non-metallic fabric surrounding the casing, a heating element arranged within the inner wall of the double walled casing and closing the other end thereof, and means



located upon the outside of the casing and connected to the heating element for regulating the heat.

1,347,996. DEVICE FOR STOPPING TRAINS OR CARS. HOLLIS J. DERBY, Amherst, Ohio. Filed June 5, 1916. Serial No. 101,815. 2 Claims. (Cl. 246—190.)

1. In a device of the class described, the combination with a cylinder having perforated caps at its ends and an exhaust port at about its midlength, a spark plug in the perforation of the outer cap and included in an ignition circuit, a piston within the cylinder between this cap and said port, the space between such cap and piston constituting an expansion chamber adapted to contain an explosive, and means for closing said circuit; of a rod leading from the piston through the perforation in the inner cap, a shoulder fixed on the rod in position to strike this cap when the piston has passed said port, a spring bearing the rod and piston normally inward, and a lever connected with an actuated by movements of said rod.

1,347,997. FUEL-MIXER. JOHN DUFFY, Chicago, Ill. Filed Dec. 3, 1917. Serial No. 205,084. 6 Claims. (Cl. 251—108.)

1. A device of the class described comprising a casing; a rotary valve member in said casing; means for supplying water to said casing and conducting the same away, said means being controlled by said valve; substantially diametrically projecting operating arms on said valve; substantially diametrically disposed sockets on said casing coöperating with said arms; and an operating connection for said arms arranged to be mounted in either of said sockets and operatively connected with either of said operating arms, substantially as described.

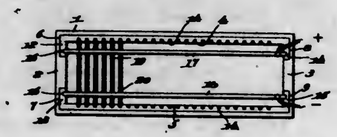
2. A device of the class described comprising a hollow cylindrical casing open at one end and having one or more air ports eccentrically positioned in its other end; a hollow rotary valve mounted in said casing and closed on all sides, the inner portion of said valve being provided with one or more eccentrically positioned ports adapted to be brought into registration with the air ports in said casing; and means for operating said valve, substantially as described.

3. A device of the class described comprising a casing; means leading horizontally from one side of said casing for connecting said casing with the intake of an engine; means leading horizontally into the opposite side of said casing for admitting water thereto; ports in the end of said casing admitting air thereto; a rotary valve controlling the passage from said water and air admission means to said connecting means; substantially diametrically disposed operating arms on said valve; substantially diametrically disposed sockets on said casing coöperating with said arms; and an operating connection for said arms arranged to be mounted in either of said sockets and operatively connected with the corresponding arm, substantially as described.

4. A device of the class described comprising a hollow cylindrical casing open at one end and having a plurality of air ports in its other end; a central stem projecting from the closed end of said casing through the open end thereof; a nipple leading horizontally from one side of said casing for connecting said casing with the intake of an engine; a nipple leading horizontally into the opposite side of said casing for supplying water thereto; a rotary hollow valve mounted on said stem having ports in its side walls controlling the water inlet and the connection with the intake of the engine, and ports in its end wall controlling the air inlet ports; substantially diametrically projecting operating arms on said valve; substantially diametrically disposed sockets on said casing cooperating with said arms; and an operating connection for said arms arranged to be mounted in either of said sockets and operatively connected with the corresponding arm, substantially as described.

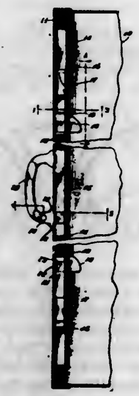
5. A device of the class described, comprising a casing open at one end and having one or more air ports in its other end; a hollow rotary valve mounted in said casing and closed on all sides, the inner portion of said valve being provided with one or more ports adapted to be brought into registration with the air ports in said casing, and the outer portion of said valve projecting beyond said casing; substantially diametrically projecting operating arms secured to the outer end of said valve; substantially diametrically projecting arms secured to said casing adjacent the open end thereof, each of said arms having a longitudinally extending socket adjacent the free end thereof; and an operating connection for said first mentioned arms arranged to be mounted in either of said sockets and operatively connected with the corresponding arm, substantially as described.

1,347,998. EYEGLASS-MOUNTING. EDGAR R. DURGIN, Newark, N. J., assignor to New Jersey Optical Co., Newark, N. J., a Corporation of New Jersey. Filed Feb. 27, 1919. Serial No. 279,560. 4 Claims. (Cl. 88—42.)



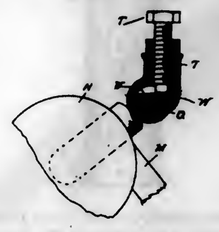
1. In an eyeglass mounting the combination of a bridge which is circular in cross section, the said bridge being bowed and having outwardly extending projections at its opposite ends, nose gripping members terminating in outwardly extending projections at their upper ends, means for securing the projections of the bridge and of the nose gripping members respectively together, straps having operative connection with the lenses of the eyeglasses, the outer ends of said projections being secured directly to the said straps.

1,347,099. COLLAR-HOLDER. JACOB ELSON, New York, N. Y. Filed Mar. 26, 1920. Serial No. 369,033. 5 Claims. (Cl. 24—81.)



4. A holder for soft fold over collars embodying a front member and a back member provided at their centers with interfitting spring loops, and means for securing said members together at the looped portions thereof, whereby the opposite ends of the holder constitute two spring clips, a portion of the forward face of the back member on either side of the spring looped portion thereof being knurled to tightly grip the fold over portion of the collar on the concealed face thereof.

1,348,000. FORMATION-TANK. DAVID H. FLEMING, Boston, Mass. Filed Apr. 7, 1920. Serial No. 371,905. 3 Claims. (Cl. 204—29.)



2. A formation tank for preparing storage battery plates comprising a liquid container, said container being substantially as wide as the storage battery plates to be prepared and being sufficiently long to receive a series of plates in spaced transverse relationship, said container having vertical grooves in its opposite sides to receive and hold the plates in position, said grooves terminating in shoulders somewhat above the bottom of the container to support the plates in spaced relationship to the bottom of the container, and the end walls of said container having recesses to receive and hold conducting bars in juxtaposition to the terminal lugs extending from the battery plates, the portions of said container having said grooves and recesses being formed of acid resisting and electrically insulating material.

1,348,001. DOOR-LATCH. ADOLF E. FOHN, Montgomery, Ill., assignor to Aurora Steel Products Company, Aurora, Ill., a Corporation of Illinois. Filed Jan. 9, 1920. Serial No. 350,260. 9 Claims. (Cl. 292—18.)

1. The combination with a door, of a pivoted latch thereon extending out from the body of the door at an angle thereto, a fixed keeper with the lower edge of which said latch engages when the door is closed, and vertically-sliding means carried by the door for holding said latch normally forced up into engagement with the keeper when the door is closed.

1,348,002. FAN ADJUSTMENT. RAY HARROUN, Highland Park, Mich., assignor to Harroun Motors Corporation, Wayne, Mich., a Corporation of Delaware. Filed Feb. 12, 1917. Serial No. 148,210. 6 Claims. (Cl. 64—52.)

1. A combinated support and tightener, comprising a shaft having offset portions, one of which carries a pulley wheel and the other of which has a bearing surface, a bearing for said last-mentioned offset portion, a set screw engageable with said last-mentioned offset portion to rock said shaft, and means for limiting the rocking movement of said shaft.

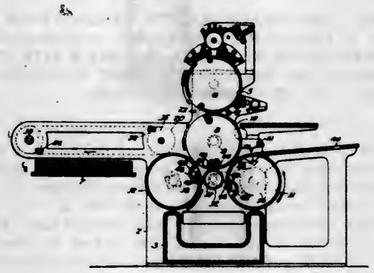
1,348,003. TRACTOR. RALPH B. HARTSOUGH, Minneapolis, Minn. Filed June 21, 1915. Serial No. 35,191. 13 Claims. (Cl. 180—27.)

1. In a three wheeled tractor, the combination with a truck frame, of axially alined laterally spaced rear traction wheels, a relatively small front guide wheel alined with one of said traction wheels, a differential gear mechanism connecting said traction wheels, and a motor carried by said truck frame and having connections for driving said traction wheels through said differential gear mechanism.

1,348,004. PRESS-PLATE FOR COTTON-SEED AND OTHER OIL PRESSES. NELSON B. HENRY, Atlanta, Ga., assignor to The Murray Company, Dallas, Tex., a Corporation of Texas. Filed Sept. 9, 1919. Serial No. 322,658. 3 Claims. (Cl. 100—54.)

1. In a press plate, a body, a flange formed at each end of the plate, curved side flanges for the plate, said side flanges bent inwardly toward the body to constitute one

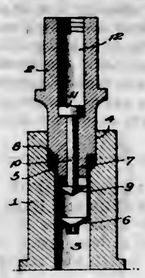
member of an interlocking device between consecutive press plates and vertical lugs projecting from the bottom of the side flanges to constitute the other member of said interlocking device.



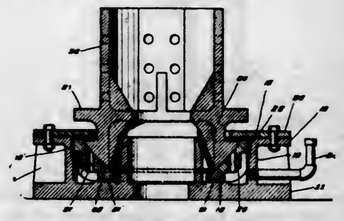
3. A press plate having a central body, side flanges and end rims surrounding said body and integral therewith, corner brackets projecting laterally from the side flanges, lower lugs projecting vertically from said flanges, and a cake supporting plate secured to the body and extending toward, but not meeting the side flanges.

1,348,005. TOOL FOR INSERTING PLUGS IN TIRES. HARRY R. HIRST, Trenton, N. J. Filed Mar. 20, 1919. Serial No. 283,870. 2 Claims. (Cl. 152—27.)

1. A tool for inserting plugs in tires comprising, a tube having a body portion of the same interior diameter as the cross-section of the body portion of a resilient plug adapted to be inserted therein, a reduced end portion formed upon the end of the tube and a plunger mounted within the tube adapted to force the plug into the said reduced end portion and compress the body of the plug to a smaller diameter and eject a portion of the plug from the end of the tool.



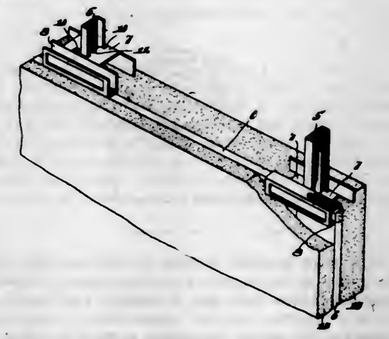
1,348,006. PLANOGRAPHIC PRINTING-PRESS. WILLIS K. HODGMAN, Taunton, Mass., assignor to Miehle Printing Press & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 20, 1915. Serial No. 56,838. 11 Claims. (Cl. 101—137.)



1. In a rotary printing press, a cylinder carrying a design to be printed, an impression roll having a true and unbroken periphery to press the sheets to be printed against the said design, and frictional driving means providing slippage to rotate the said impression roll from a source of power other than the printing cylinder at a velocity flexibly suited to the work being done.

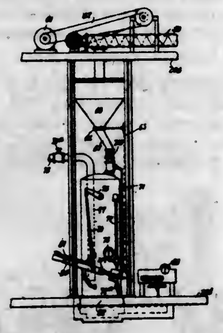
1,348,007. DIE FOR EXTRUDING COLLAPSIBLE TUBES. WILLIAM C. HUNTOON, Providence, R. I. Filed June 10, 1919. Serial No. 303,179. 8 Claims. (Cl. 207—3.)

1. A die for extruding collapsible tubes, comprising a female part having a cylindrical chamber of a diameter equal to the outer diameter of the tube, said chamber having one end counterbored to form an internal, blank-supporting shoulder, a male part in the form of a plunger slidably fitting the counterbore and having an extension to a diameter equal to the inner diameter of the tube, and means carried by the extension for guiding the interior wall of the tube during the extrustion thereof.



1,348,008. DERRICK-BASE. WILLIAM H. INSLEY and ALVIN C. RASMUSSEN, Indianapolis, Ind., assignors to Insley Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed June 13, 1919. Serial No. 304,030. 4 Claims. (Cl. 212—70.)

2. A derrick-base comprising a base member forming a well provided with a substantially horizontal wearing face and a cylindrical substantially vertical wearing face; an intermediate step member mounted in the well and provided with a substantially horizontal wearing face and a cylindrical substantially vertical wearing face, and an upwardly-presented spherical-segment socket; a mast-foot member having a mast-receiving upper end and a lower end carrying a spherical segment seated in the socket of the step member, and means for preventing undue displacement of said parts.

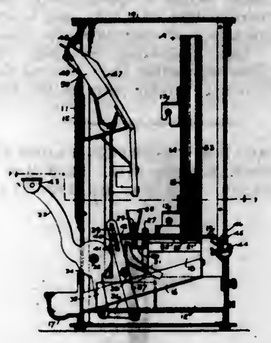


1,348,009. STRUCTURE FOR PARTITIONS, CEILINGS, AND THE LIKE. MARVIN H. JESTER, Chicago, Ill. Filed Nov. 29, 1918. Serial No. 264,553. 4 Claims. (Cl. 72—46.)

1. In a building structure of the character described, the combination of an anchoring element; a board;

means for connecting said board and anchoring element, comprising a member engaging with said board and having a laterally opening slot engaging with said anchoring element, said slot being notched at one side, whereby said member, through longitudinal shifting thereof, will interlock with said anchoring element and be held thereby against lateral shifting; and means for locking said member against longitudinal shifting in order to interlock with said anchoring element, substantially as described.

1,348,010. BLOWING-TANK FOR COMPRESSED-AIR TRANSPORT SYSTEMS. HARRY ARTHUR KIMBER, New Rochelle, N. Y., assignor to Quigley Furnace Specialties Co., Inc., a Corporation of New York. Filed Jan. 31, 1918. Serial No. 214,755. 2 Claims. (Cl. 302—53.)



2. An apparatus such as set forth in claim 1, in which the outlet pipe exetnds nearly to the bottom of the tank and has its inlet facing downward combined with a cone set on the tank floor opposite the said inlet, and a vertically movable curtain pipe, open at top and bottom, surrounding the outlet pipe and adapted to be forced down around the cone to prevent the outflow of the coal from the tank, while permitting air to pass out downwardly through it and upwardly through the outlet pipe, whereby, when the delivery of coal is thereby stopped, air may still flow out to scavenge the outlet piping.

1,348,011. SNAP-FASTENER. WILLIAM H. LAMMERS, New York, N. Y. Filed Aug. 1, 1918, Serial No. 247,815. Renewed May 28, 1920. Serial No. 385,069. 3 Claims. (Cl. 24—217.)

1. In a snap fastener, a head member having a relatively square shoulder, and a socket member having an eye through which the head is directly and bodily projected in a direction parallel to the central axis thereof in attaching the parts, the socket member however preventing the withdrawal of the head in the direction directly opposite to the aforesaid direction of attachment.

1,348,012. REGISTERING CONTRIBUTION-BOX. FRANK W. LANCASTER, Philadelphia, Pa. Filed Nov. 30, 1918. Serial No. 264,790. 1 Claim. (Cl. 194—80.)

In an apparatus of the character described, the combination with a fixed upright tube for checks having a retarding ledge across the rear side of its lower end, a chute beneath the latter leading to a delivery cup, and a coin chute forward of the tube; of a bridge having a guide forward of the lower end of the tube, a plunger slidable in said guide and having cleats rising from its edges and turned inward into flanges, the plunger having a transverse coin slot in its bottom and the flanges having notches over the ends of said slot, a spring moving the plunger normally rearward against said tube, manually operable mechanism for moving the plunger forward, a funnel carried by the plunger and standing normally beneath said coin chute, a rest plate carried by the bridge and extending forward beyond said slot, and a slide guided within said plunger and having a coin slot registering with the slot thereof and a check opening registering with the bore of the tube.

1,348,013. METHOD OF MAKING CASING-SHOES, &c. JOHN J. LARKIN, Bartlesville, Okla. Continuation of application Serial No. 283,474, filed May 9, 1914. This application filed Oct. 11, 1919. Serial No. 330,014. 2 Claims. (Cl. 29—156.)

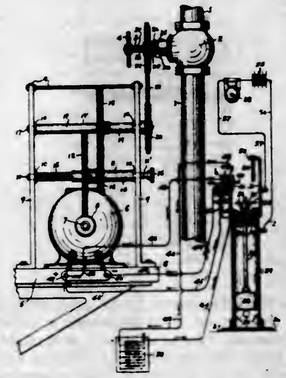
1. The method of forming drive or casing shoes for oil-wells, or like cylindrical articles, consisting in heating a cylindrical blank, expanding the blank to shape it interiorly and at the same time increase its external diameter over its finished size for a portion of its length, and then removing the expanded metal exteriorly from the blank, thereby producing a straight outside wall for the entire length of the blank.

1,348,014. CLOSURE FOR BOTTLES AND OTHER RECEPTACLES. ANDREW C. LATHROP, Yantic, Conn. Filed Mar. 14, 1918. Serial No. 222,418. 8 Claims. (Cl. 215—72.)

1. A closure including a retaining member having a circular bore therethrough, the upper walls of said bore converging upwardly, the uppermost end of said bore

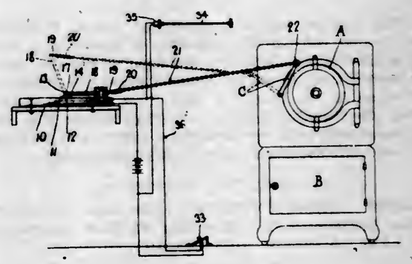
being square, and a buoyant stopper having its body portion the same shape as said bore to be snugly received

therein, the upper portion of said stopper being square to be engaged by the square portion of the bore, and extended thereabove.



1,348,015. LEAK-DETECTOR FOR VESSELS. HERMAN H. LEE, Brooklyn, N. Y. Filed Apr. 20, 1918. Serial No. 229,691. 1 Claim. (Cl. 200—84.)

In a device of the kind described, a float, a stem extending vertically upward from said float, guide-means for slidably supporting said stem, a combined stop and contact collar on said stem above said guide means, a graduated scale on said stem for determining the desired adjustment of said collar thereon for the purpose of positioning the float to receive the buoying contact of fluid when the latter rises to a predetermined level, a contact-post mounted on and insulated from said guide-means adjacent to said stem, said contact-post having a horizontal portion projecting toward said stem to lie in the path of upward movement of said collar when said float and its stem rise, an electric alarm circuit grounded on one side to said guide-means and stem and electrically connected on the other side to said contact-post.

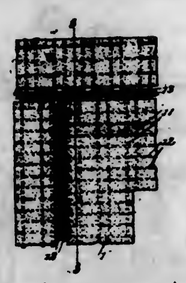


1,348,016. AUTOMATIC VALVE-CONTROLLING MEANS. HERMAN H. LEE, Brooklyn, N. Y. Filed Jan. 31, 1919. Serial No. 274,316. 1 Claim. (Cl. 172—288.)

In a device of the kind described, a pump controlling valve mechanism having a rotary stem, an electric motor, transmission mechanism driven by sad motor for rotating said valve stem, an electric circuit serving said motor, a normally open reversing switch mechanism included in said circuit for reversing the flow of current to cause said motor to rotate in a reverse direction, a trigger arm connected with said switch mechanism for moving the same, a vertically movable float mechanism having a stem, a trip arm carried by said stem, upward movement of said stem being adapted to carry said trip arm in passing engagement with said trigger arm to operate said switch mechanism to pass the current through said motor causing

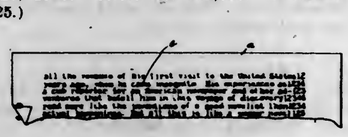
a time limited rotation of the latter in one direction, the downward movement of said stem being adapted to carry said trip arm in a reversed passing engagement with said trigger arm to operate said switch mechanism to reverse the current through said motor causing a time limited rotation of the latter in the opposite direction, and a fluid chamber having fluid admission passages in which said float mechanism is mounted.

1,348,017. AUTOMATIC SAFE-CLOSER. ELMER G. LEON, Hubbleton, Wis. Filed Jan. 5, 1920. Serial No. 349,421. 2 Claims. (Cl. 268—9.)



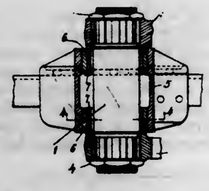
1. In combination with the handle of a time lock safe door, an automatic door closing device comprising a spring-pressed arm, a flexible member connected with the arm and with the door handle, a trigger member engaging over said arm and normally maintaining the same under tension, a lever engaging said trigger member for holding the same in operative position, and electro-magnetic means for moving said lever out of engagement with said trigger.

1,348,018. METHOD OF BUILDING CONSTRUCTION. FRED LICHTENBERG and MICHAEL M. MCCARTHY, Yonkers, N. Y. Filed Oct. 13, 1919. Serial No. 330,161. 1 Claim (Cl. 72—46.)



A wall construction comprising vertical spaced studding, a plurality of slabs of planted material nailed to said studding in broken joint formation with the edges of the

slabs in spaced relation, each slab having a reinforcing element molded therein in a form of a sheet of woven wire fabric the edges of which extend beyond the edges of the slab, the vertical strands of said reinforcing element being looped at each end, a horizontal strand straight with each end said loop being arranged between the loop of reinforcing element of adjacent slab and the projecting edges of the horizontal strands being arranged in over

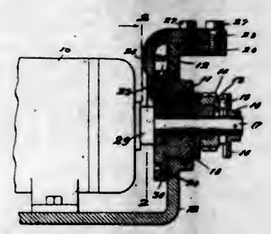


lapping relation with respect to the projecting edges of the reinforcing element of adjacent slabs, a covering of tar paper upon the rear face of each slab said paper projecting beyond the edges of each slab to a distance corresponding to the extent of projection of the reinforcing element thereof whereby said paper edges of adjacent slabs may be overlapped, and a bond of plastered material filled in between the slabs.

1,348,019. METHOD OF PREPARING PLATES FOR PRINTING. MALVIN LICHTER, New York, N. Y. Filed Oct. 23, 1919. Serial No. 332,695. 2 Claims. (Cl. 41—25.)

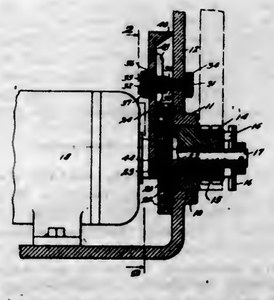
1. The method, herein described, of making a printing plate, which consists in preparing a typewritten sheet having intelligible characters arranged in lines of different lengths and providing means thereon for indicating differences in the length of said lines, copying upon a second sheet lines coinciding in subject matter with said first mentioned lines but of uniform length, and making a printing plate from said second mentioned sheet.

1,348,020. FRICTION-PIVOT. BENJAMIN LIEBOWITZ, New Rochelle, N. Y. Filed July 31, 1919. Serial No. 314,558. 3 Claims. (Cl. 64–10.)



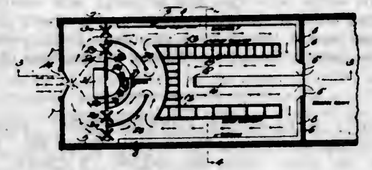
3. In a friction pivot which is maintained continuously under load, the combination of a pivot pin, a bearing, and a bushing, said elements constituting two pivot-pairs, one of said pivot-pairs being adapted for rolling motion through a predetermined angle of rotation by having the inner element of said pair of smaller radius than the outer, the ratio of the radii being such as to cause a sliding tendency when said predetermined angle has been exceeded, the other of said pivot-pairs being adapted for sliding motion whereby the sliding tendency set up in the rolling pivot-pair will cause sliding rotation of the sliding pivot-pair, without causing any appreciable sliding in the rolling pivot-pair.

1,348,021. STAY-SECURING DEVICE. MARY A. LILLIBRIDGE, Waterford township, Erie county, Pa. Filed Aug. 13, 1919. Serial No. 317,272. 6 Claims. (Cl. 2–76.)



4. In a stay securing device, the combination of a clip, said clip having two snap fastener sockets; a wire forming the spring for said sockets extending across the end and along the edge of the clip; a fold along the edge of the clip for securing the wire; and a fastener plate for operating in the sockets, said plate and clip forming a means of attachment to a pocket and forming a stop preventing the protrusion of the stay therefrom.

1,348,022. LOCKING DEVICE FOR ECCENTRIC BUSHINGS. FRANCIS JOSEPH MCAVOY, Newark, N. J. Filed Sept. 30, 1919. Serial No. 327,382. 3 Claims. (Cl. 64—53.)

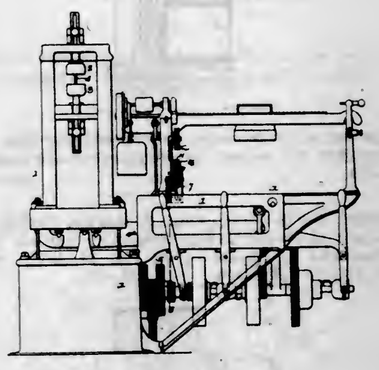


1. In an internal combustion motor, an eccentric bushing mounted to turn in a fixed bearing, and a detachable locking member adjacent one face of the bushing, the said bushing and the said locking member having a plurality of interlocking members to hold the bushing against turning in any one of a series of adjusted positions.

1,348,023. LOCKING DEVICE FOR ECCENTRIC BUSHINGS. FRANCIS JOSEPH MCAVOY, Newark, N. J. Filed Jan. 17, 1920. Serial No. 352,096. 3 Claims. (Cl. 64—53.)

1. In an internal combustion motor, an eccentric bushing provided with spaced recesses arranged in a circle concentric to the peripheral face of the bushing, a bracket provided with pins adapted to engage sundry of the said recesses, and fastening means detachably fastening the bracket to a fixed part of the motor, the said bracket when fastened in place by the said fastening means holding the bushing against turning, and the said bracket when unfastened by the said fastening means serving as a spanner wrench to turn the bushing.

1,348,024. SELF-SERVING STORE. WILLIAM B. MCCARTY, Jackson, Miss. Filed June 7, 1919. Serial No. 302,451. 1 Claim. (Cl. 211—8.)



In a store for the vending of merchandise, a storage inclosure provided with shelving extending along its side walls and rear wall, said inclosure having an attendant's desk in the middle of its front portion, a merchandise holder extending from the middle of the rear portion of the inclosure toward the said attendant's desk, a substantially U-shaped merchandise holder having its bight portion disposed between and spaced from said desk and from the first said merchandise holder a distance to permit persons to pass one another through the spaces thus provided, the other parts of said U-shaped merchandise holder being spaced from the said wall shelving and from the first said merchandise holder a distance to permit persons to pass therebetween, all parts of said U-shaped merchandise holder being sufficiently low to permit an attendant at said desk to see persons on all sides of said U-shaped merchandise holder, rearwardly bowed partitions extending forward and laterally from points midway between said merchandise holder and attendant's desk to points midway between said side walls and said attendant's desk to form walled entrance passages and exit passages which are in open communication with said passageway through a doorway between said partitions, exclusively entrance gates in said entrance passages, and exclusively exit gates in said exit passages the latter being between said rearwardly bowed partitions and the said attendant's desk.

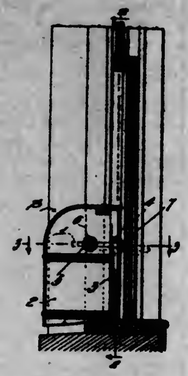
1,348,025. SOAP AND APPLICATOR HOLDER. CHARLES A. MAHER, Wallowa, Oreg. Filed Apr. 10, 1919. Serial No. 289,166. 3 Claims. (Cl. 132—33.)

1. A combined shaving soap and applicator holder comprising a receptacle for soap, open at one end and closed at the other, a cap member for closing the open end of said receptacle, said cap member being provided with a threaded socket at one end, threads on the open end of the receptacle to be engaged by the threads on the socket of the cap member, and an applicator having its inner portion exteriorly threaded to engage the threads of the socket, and having a projecting extension.

1,348,026. MACHINE FOR TESTING. ALEXANDER P. MALYSHEFF, Tomsk, Russia, assignor to Tinius Olsen Testing Machine Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 7, 1916. Serial No. 130,033. 4 Claims. (Cl. 265—16.)

1. The combination of a machine for causing deformation of a test specimen; weighing mechanism for indicating the amount of stress applied to said specimen; and means for indicating the combined deformation of said specimen and of the machine.

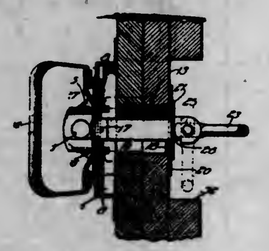
2. The combination in a testing machine of a member connected to a test specimen; a train of mechanism for moving said member to cause deformation of said specimen; and a device connected to said mechanism for indicating the combined deformation of the specimen and of said mechanism.



3. The combination in a testing machine of a fixed and a movable member for connection to a test specimen; mechanism including a rotary element for causing one of said members to move relatively to the other to exert stress upon said specimen; a device including an element driven from said rotary member; and an indicator mounted to coöperate with said element to show the combined deformation of the machine and specimen.

4. The combination in a testing machine of two members for engaging a specimen under test; mechanism including a rotary element for moving one of said members relatively to the other to exert a stress upon said specimen; a sprocket operatively connected to said element; a rotary shaft; a second sprocket on said shaft; means for operatively connecting said sprockets; a graduated disk on the shaft; with a relatively fixed indicator extending adjacent the graduated disk.

1,348,027. FOOD-SAFE FOR WINDOWS. JOHN MARKWICK, Detroit, Mich. Filed Dec. 18, 1919. Serial No. 345,690. 1 Claim. (Cl. 45—104.)



A food safe having end walls cut from their inner faces to provide fastener receiving pockets and bored from their edge faces to provide bolt receiving passages intersecting the fastener receiving pockets, securing strips engaging the edge faces of the end walls and having trans-

versely extending slots, securing bolts extending through the slots of the strips and through the passages of the end walls to slidably connect the strips with the end walls

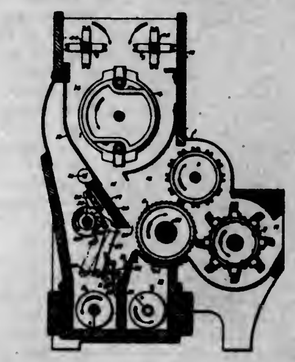
for movement transversely thereof, and securing nuts positioned in the fastener receiving pockets and engaging the bolts.

1,348,028. DOOR-LOCK. CECIL R. MARTIN, Sterling, Ill., assignor to Frantz Manufacturing Co., Sterling, Ill., a Corporation of Illinois. Filed July 29, 1918. Serial No. 247,335. 22 Claims. (Cl. 292—49.)

1. A door lock comprising a stationary element, a rotary cam, pivoted members arranged above and below said cam and having end portions forming latching means to engage said element, a rock-shaft extending through said cam, a casing for said mechanism, means to secure said casing to the outer side of the door, a handle disposed on the casing to turn said shaft, a plate secured on the inner side of the door, a disk on the shaft inside of said plate, and a handle secured to said disk to turn the shaft.

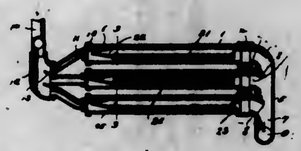
1,348,029. METHOD AND APPARATUS FOR TREATING FILMS. JOSEPH MASON, New York, N. Y., assignor, by mesne assignments, to Prisma Incorporated, a Corporation of Maine. Filed Mar. 14, 1919, Serial No. 282,527. Renewed Feb. 19, 1920. Serial No. 359,851. 15 Claims. (Cl. 91—69.)

1. The step in treating a surface with a liquid which consists in holding the surface adjacent the liquid and maintaining contact of the liquid and the surface by the tension of the liquid.



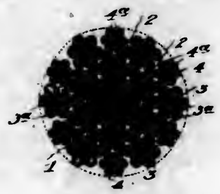
11. A film treating apparatus comprising a constant level tank, and film supporting means extending longitudinally of the tank and having supporting surfaces located relatively to the liquid level so as to support the film in surface contact with the liquid and within the limits of surface tension thereof.

1,348,030. AUTOMOBILE-BUMPER. WILLIAM J. MILLARD, New York, N. Y. Filed June 12, 1919. Serial No. 303,554. 2 Claims. (Cl. 293—55.)



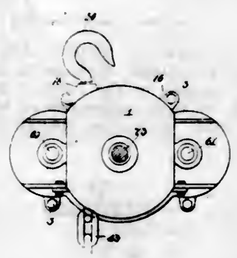
1. A vehicle bumper comprising a metal bar adapted to be secured to the vehicle, and a bar of cushioning material secured against the outer side of said metal bar with its entire outer face free of metal, said cushioning bar being of solid formation except having closely spaced openings formed therethrough to provide freely yieldable webs connecting the outer and inner side portions of said bar.

1,348,031. HULL-BOARD CONSTRUCTION. JOHN E. MITCHELL and DENNIS PARKS, St. Louis, Mo. Filed Mar. 29, 1919. Serial No. 285,996. 6 Claims. (Cl. 13—12.)



2. A boll breaking and cotton separating machine affording a working chamber for receiving the mixed cotton and hulls to be separated and having an outlet for hulls, cotton separating mechanism including a saw cylinder operating in said chamber, a hull board coöperating with said saw cylinder, the bottom of which defines the size of an opening past the saw cylinder for the escape of hulls, means operating periodically to move said hull board to widen said opening to discharge accumulated products from said chamber, and means operating to separately deliver such discharged products from the hulls normally escaping through said opening.

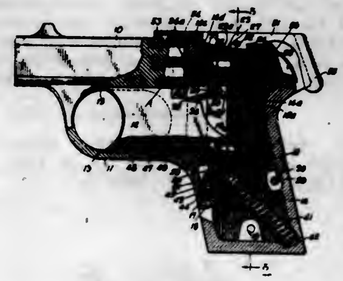
1,348,032. AUTOMOBILE-HEATER. MASON C. MOODY, Fairfield, Ala. Filed Oct. 15, 1919. Serial No. 330,765. 4 Claims. (Cl. 257—248.)



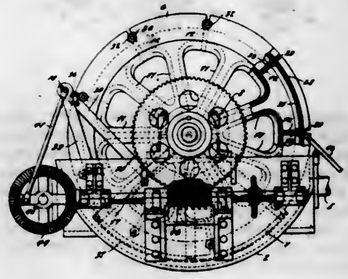
2. A sectional radiator for use as described, each section consisting of a flue with means for directing a heating fluid longitudinally throughout its length, a core consisting of a pipe containing a heat-retaining filling, and spiders for holding the core along the axis of the flue.

1,348,033. WIRE ROPE. GEORGE C. MOOR, Cranford, N. J. Filed Mar. 17, 1920. Serial No. 366,644. 5 Claims. (Cl. 28—5.)

3. A wire rope or cable comprising an inner series of strands each having a plurality of wires twisted together and all laid side by side in the same direction, and an outer series of strands laid in the same direction as the inner strands, said outer strands each having a plurality of wires twisted together, the wires of some of the outer strands being larger than the wires of other outer strands, the latter strands being of less diameter than the outer strands having the larger wires.



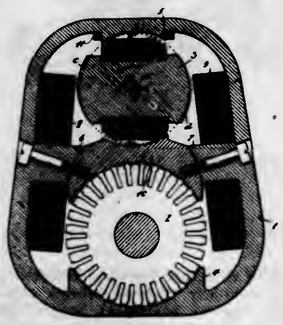
1,348,034. HOIST. EDWARD Y. MOORE, Cleveland, Ohio. Filed Oct. 17, 1919. Serial No. 331,416. 6 Claims. (Cl. 254—171.)



1. In a hoist, the combination of a frame made up of two box-like castings bolted together face to face, each of said castings having a vertical wall with a central bearing opening and peripheral walls inclosing said vertical walls, the forward one of said castings having an intermediate wall with a central opening and forming two chambers within said frame, the rear one of said castings having its peripheral wall projecting rearwardly of the vertical plate therein, said intermediate wall and the vertical wall of the rear casting having alined bearings, stub shafts mounted within said bearings having gears thereon, a third casting secured to said rearwardly projecting peripheral wall and constituting therewith an inclosed housing for said gears, a driving shaft within the bearing openings in said vertical walls, having a driving gear thereon in mesh with said first named gears, a lift wheel surrounding said driving shaft comprising a single integral member having pockets in one chamber and gear teeth in the other chamber and an intermediate circular zone closely coacting with the edge of the opening in the intermediate wall, said gear teeth being formed on an enlarger portion and constituting a driven gear, and yokes actuated by said stub shafts in engagement with said driven gear.

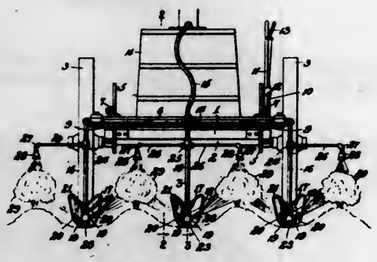
1,348,035. FIREARM. OSCAR F. MOSSBERG, New Haven, Conn. Filed Aug. 28, 1919. Serial No. 320,494. 17 Claims. (Cl. 42—8.)

5. A firearm including a frame, a hammer supported by the frame, a barrel swingably mounted on the frame, and a trigger for actuating said hammer, said trigger being carried by said barrel to partake of the swinging movements thereof and being movable out of operative relation to the hammer upon movement of the barrel to any angular position relatively to its normal position.



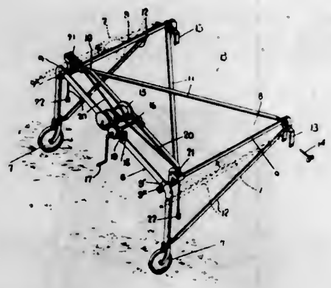
1,348,036. FILTER. WILLIAM D. MOUNT, Lynchburg, Va. Filed Dec. 11, 1919. Serial No. 344,227. 6 Claims. (Cl. 210—202.)

1. A filter comprising a rotary drum having two peripheral flanges and a series of successively arranged interchangeable grids mounted between said flanges and constituting the peripheral surface of the drum and a single clamping device for simultaneously securing the two abutting edges of adjoining grids to the drums.



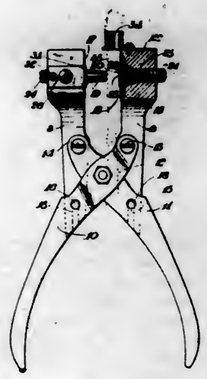
1,348,037. DYNAMO-ELECTRIC MACHINE. ALFONS H. NEULAND, San Francisco, Calif. Filed Nov. 24, 1916. Serial No. 133,111. 11 Claims. (Cl. 171—313.)

1. A generator comprising a magnetic casing including an intermediate transverse double-faced pole member, an



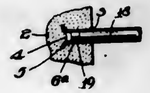
armature on one side of the pole member adapted to be driven at variable speeds and coöperative with one of the pole faces, a rotative magnetic shunt member on the other side of the pole member coöperative with the other pole face and having a limited movement during which the number of lines of force shunted ranges from a minimum to a maximum, and a field coil so disposed on the pole member that the two pole faces are of the same polarity.

1,348,038. SPRAYER FOR PLANTS. HORACE FALK NEUMEYER, Macungie, Pa. Filed Jan. 18, 1919. Serial No. 271,822. 6 Claims. (Cl. 299—39.)



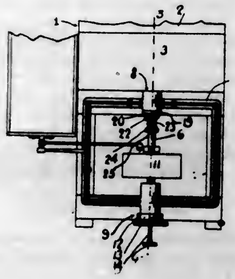
1. A sprayer comprising a suitable vehicle, shares constituting lifting devices for fallen or depressed parts of the plants, means located in rear of said shares and adapted to travel on the ground to maintain the points of the shares either on or slightly above the surface of the ground, and spraying nozzles carried by the shares in rear thereof and tilted toward opposite sides thereof at a rising angle for directing sprays upwardly against the under sides of the plants.

1,348,039. HARROW-TRUCK. BAYARD B. NICELEY, Luttrell, Tenn. Filed Oct. 17, 1919. Serial No. 331,367. 7 Claims. (Cl. 280—61.)



4. A truck of the class described comprising a wheeled frame of substantially U-shape, wheels attached to the ends of said frame, a horizontal frame adjustably connected with the cross piece of said wheeled frame, forks at the free ends of said horizontal frame, a drum on the truck, a cable attached to the drum and winding means for the drum

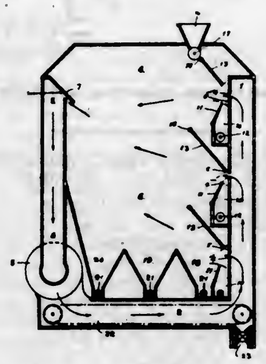
1,348,040. RIVETING-TOOL. SAMUEL R. NICHOLS, Shelton, Nebr. Filed June 6, 1919. Serial No. 302,331. 4 Claims. (Cl. 128—330.)



1. In a tool for attaching identifying tags to animals, the combination with tag applying means including movable jaws, of a gage member carried by one of the jaws for gaging the thickness of the flesh to which the tag is to be applied.

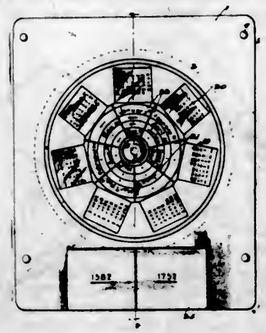
1,348,041. ARTIFICIAL TOOTH AND METHOD OF MAKING THE SAME. EDWARD PELTZ OFF, Philadelphia, Pa., assignor to The Dentists' Supply Company, New York, N. Y., a Corporation of New York. Filed July 25, 1918. Serial No. 246,681. 5 Claims. (Cl. 32—9.)

1. An artificial tooth having a vitrified body provided with a hole having at the bottom a lateral curved undercut groove, combined with a metal anchor mechaically fitting the hole and attached in the bottom of the hole by having its lower end curved laterally and crowded into the undercut groove to substantially fill the same.



1,348,042. BEARING. WILLIAM JOHN PALMER, Northwilkesboro, N. C. Filed Nov. 24, 1919. Serial No. 340,387. 1 Claim. (Cl. 83—8.)

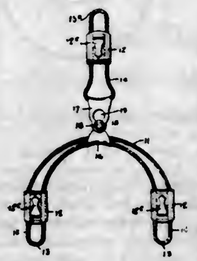
In combination with a grist mill having a stationary grinding stone, a revoluble grinding stone, a shaft for



the latter, means for moving the shaft longitudinally, a frame on which the shaft is journaled, and means for revolving the shaft; of a bearing for holding the shaft against accidental longitudinal movement to prevent the confronting faces of the mill stones being brought into excessive frictional engagement, said bearing comprising a cup member loosely mounted on the shaft and having its closed face contacting with one of the sides of the frame, anti-frictional elements in said cup-shaped member, a disk member loose on the shaft received in the cup-shaped member and contacting with the anti-frictional elements therefor, a spring surrounding the shaft and contacting with the disk, and an adjustable collar on the shaft and engaging with the spring.

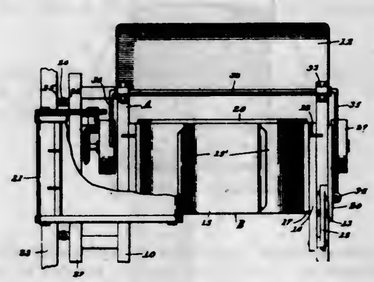
1,348,043. BROKEN-GRANULAR-MATERIAL AND GRAIN PURIFYING MACHINE. TOM PARKINSON, Dunston-on-Tyne, England. Filed Nov. 10, 1919. Serial No. 336,927. 3 Claims. (Cl. 83—40.)

3. In a machine for separating and grading material a casing having a series of hoppers arranged in superimposed relation and adjustable to vary the size of their entrance openings, means for directing a blast of air across the upper open end of each hopper, means arranged beyond each hopper for directing material forced by the blast beyond the hopper into the path of the blast of the next lowermost hopper, and material receiving hoppers arranged in the casing beyond such directing means.



1,348,044. PERPETUAL CALENDAR. ROBERT PENTLAND, Jacksonville, Fla. Filed Dec. 3, 1919. Serial No. 342,074. 7 Claims. (Cl. 40—113.)

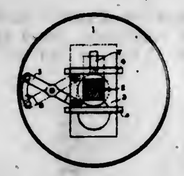
1. In a perpetual calendar, members, one rotatable with relation to the other, one member bearing upon one face



an annular series of year ordinals, the other member bearing an annular series of centurial year ordinals adapted to be selectively positioned in relation to the year ordinals of the first mentioned member in the rotation of one of the members with relation to the other, one of the said members bearing groups of month designations, and the other member bearing a plurality of monthly calendars adapted to be brought into juxtaposition with relation to the month designations through the rotation of one of the members with relation to the other.

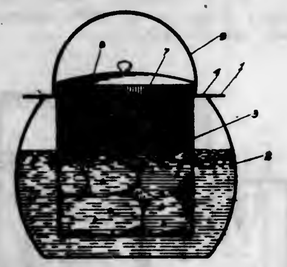
1,348,045. HOSE-SUPPORTER. ALONSO D. PERALTA, Guatemala City, Guatemala. Filed Apr. 22, 1919. Serial No. 291,830. 3 Claims. (Cl. 24—258.)

1. A device of the class described including a suspender end presenting separate side members formed into a loop into which a portion of a garment may be passed, and a slide movable on said side members and into which said loop may be drawn with the engaged portion of the garment, said slide having swingable clamp means to grip the received loop and garment portion.



1,348,046. SHOCK-FORMER. ANDREW R. PETERSON, Fargo, N. D. Filed June 13, 1919. Serial No. 303,854. 7 Claims. (Cl. 56—419.)

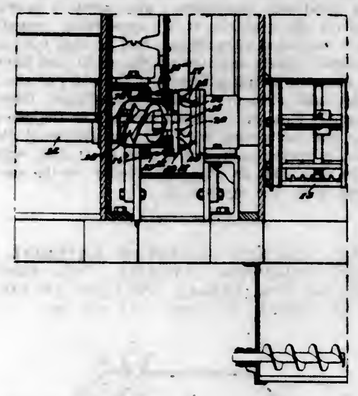
2. A grain binder attachment comprising a portable frame, spaced parallel standards on said frame, arms pivoted on said standards, a shock former including a plurality of curved sections unitedly defining a split band, one of said sections being terminally secured to said arms, the remaining corresponding end sections being freely pivoted on said arms, means carried by said end sections and coöperating with said arms whereby said sections are normally maintained in proper relation to define said band, said band being normally disposed vertically to receive the sheaves in horizontal position, means for moving said arms to a position whereby said sections of the band are simultaneously adjusted to arrange the shock verti-



cally and means whereby the end sections remain stationary upon further adjustment of said arms to move the sections thereby in a position to release said shock.

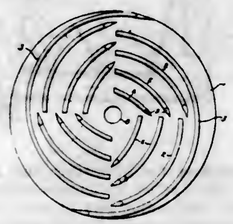
1,348,047. DOOR-HANDLE-LOCKING DEVICE. JOHN MOFFETT PETERSON and JOHN MEREDITH, Newcastle-on-Tyne, England. Filed Mar. 3, 1916. Serial No. 81,875. 1 Claim. (Cl. 292—359.)

The combination with a door knob spindle and rose plate having a relatively short slot extending along a marginal portion thereof, of a locking plate for the spindle supported for sliding movement upon the rose plate into and out of locking engagement with the knob spindle, means for retaining the locking plate in position out of locking engagement with the knob spindle, and operating means for the locking plate comprising a lever pivotally supported intermediate its ends upon the rose plate within the outer marginal edge portion thereof and to one side of the locking plate, a pivotal connection between one end of said lever and the locking plate at one side thereof, and a finger manipulating part connected to the other end of the lever and extending through the slot to the front side of the plate.



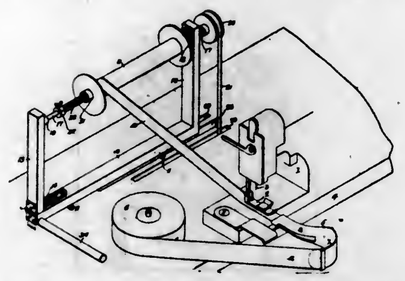
1,348,048. COOKING UTENSIL. ROSE PFEFFER, San Jose, Calif. Filed Nov. 4, 1919. Serial No. 335,656. 1 Claim. (Cl. 53—8.)

A cooking utensil comprising in combination with an open-topped pot, a flat perforated rim adapted to rest on the upper edge of the pot, a freely perforated receptacle depending from the rim into the pot, and spaced therefrom throughout its length, a flange on the rim above the receptacle, and a steam tight cover over the receptacle and removably held by the flange, the latter extending around the inner periphery of the rim.



1,348,049. FLOUR-MILL. EDSON T. POLLARD, Niagara Falls, N. Y., and WILLIAM N. MORLEY, Toronto, Canada. Filed Dec. 8, 1919. Serial No. 343,300. 3 Claims. (Cl. 83—13.)

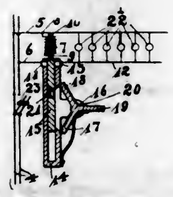
2. An improved disintegrator comprising a casing having openings, a rotating worm member in said casing, a ring or disk normally closing the delivery end of said casing and provided with arms extending loosely through said openings, lugs on said casing, adjustable bolts mounted in



said lugs, and springs connecting said bolts with said arms.

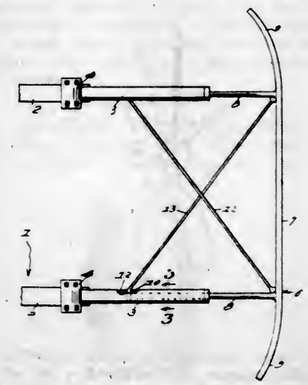
1,348,050. POLISHING-WHEEL. RALPH W. PUTNAM, Waterbury, Vt. Filed Nov. 26, 1919. Serial No. 340,767. 2 Claims. (Cl. 51—1.)

1. A device of the character stated, comprising a disk or plate, a scroll on the under face of the disk or plate, said scroll of general spiral form and composed of a plurality of series of curved flanges extending approximately one-quarter distance around the disk or plate with the forward ends of the flanges of one radial series located between the flanges of adjacent radial series.



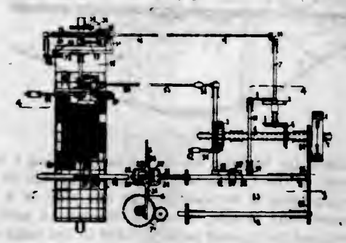
1,348,051. MACHINE FOR MAKING TUBULAR BINDING. PAUL D. REDCAY, Royersford, Pa. Filed Oct. 22, 1918. Serial No. 259,213. 4 Claims. (Cl. 112—2.)

1. The combination in a machine for making tubular fabric, of a device for folding the fabric; a machine for uniting the edges of the fabric; a spool mounted to receive



the fabric in a flat condition with the stitching at one edge; means for driving the spool so as to take up the fabric as it is stitched; and means for causing the spool to travel in the direction of its axis and transversely to the direction of feed of the fabric.

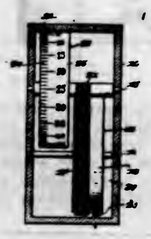
1,348,052. CONTACT. THOMAS B. RIDER, Los Angeles, Calif., assignor of one-half to Adolphe Danziger, Los Angeles, Calif. Filed Feb. 9, 1918. Serial No. 216,286. 1 Claim. (Cl. 171—97.)



In a contact in combination with a main circuit and a branch circuit, the contact being inserted in the branch circuit, a housing made of insulation material having an open end, two conducting pieces provided near the open end within the non-conducting material of the housing having connection with one line in the branch circuit forming a gap in that line, a solenoid connected to the other line in the branch circuit opposite the open end of the housing with the core end of the solenoid spaced a suitable distance from the open end of the housing, the second end of the winding of the solenoid being connected to the core thereby forming a gap in the circuit of the solenoid between the two lines in the branch circuit, and an operating member shiftably disposed in the housing adapted for closing the gap in the first named line of the branch circuit and for closing the gap in the solenoid circuit when so operated, the operating member being of suitable material so as to be held in such closing position by the solenoid when so operated.

1,348,053. AUTO-BUMPER. THOMAS L. ROBERTSON, Spray, N. C. Filed Nov. 19, 1918. Serial No. 263,207. 1 Claim. (Cl. 293—55.)

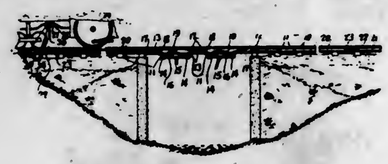
In a vehicle bumper, a pair of housings having means for attachment to the frame of a vehicle, a bumper formed with legs slidingly engaging said housings, springs within the housings and bearing upon the legs to force them and the bumper normally outward, the housings being formed with slots on their facing sides, and diagonally disposed brace bars each connecting with the spring in one housing and with the bumper at a point directly in front of the opposite housing, whereby a shock imparted to the bumper is borne by both springs irrespective of the point of impact of said shock with the bumper.



1,348,054. EMBROIDERING-MACHINE. JOHANNES GERARD FREDRAIK ROOKER, Vrijenban, near Delft, Netherlands, assignor to Firma A. De Jong, Scheepswerf en Machinefabriek, Vlaardingen, Netherlands, a Corporation of The Netherlands. Filed May 24, 1917. Serial No. 170,682. 10 Claims. (Cl. 112—102.)

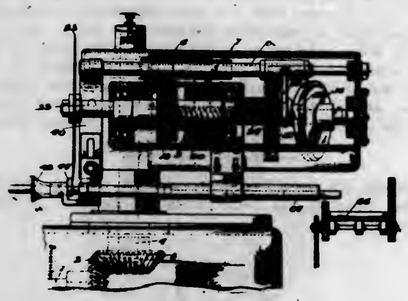
8. In an embroidering machine, the combination with a sewing machine having a feed claw, of a rotatable drum having on its periphery depressions and projections, a sliding pin adapted to engage the depressions and projections of the drum, a sliding and spring actuated rod, means for operating the pin from said rod, means for operating the rod from the sewing machine, and means for adjusting the feed claw of the machine from the said rod.

6. In an embroidering machine, the combination with a sewing machine having a clutch, of a rotatable drum having projections, a ratchet wheel on the shaft of the drum, pawls engaging the ratchet wheel, a shaft, a weighted lever mounted on the shaft and adapted to be engaged and turned by said projections, a sector on the shaft of the lever and provided with two stops adapted to be engaged by the lever, a connection between the sector and the clutch of the machine, a second sector on the shaft of the said lever and provided with an extension adapted to engage one of the pawls to disengage it from the ratchet wheel, and a link connection between the second sector and the other pawl to disengage it from the ratchet wheel.



1,348,055. GRADOMETER. RAYMOND A. SAEGER, Ankona, Fla. Filed May 14, 1918. Serial No. 234,445. 1 Claim. (Cl. 33—215.)

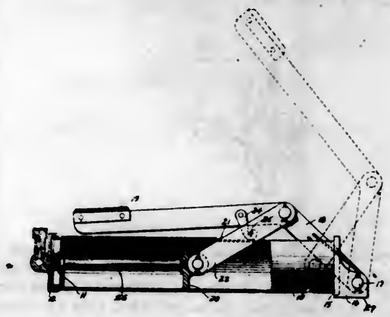
In a gradometer, two spaced shafts, a core having a round periphery and one of its faces open secured on one of said shafts, said core having a flange extending over its periphery from the closed face thereof, a toothed band arranged on the core and contacting with the flange thereof, a pinion on the second shaft meshing with the toothed band and also contacted by the flange of the core, a graduated wheel on the second shaft, a segmental



weight in the core, means on the outer edge of the core contacting with the weight for holding the same in the core, a spring brake contacting with the periphery of the core and means for adjusting the pressure of said brake against said core.

1,348,056. SAFETY DEVICE FOR RAILROADS. NORRIS J. SAULS, Plant City, Fla. Filed Nov. 13, 1918. Serial No. 262,316. 2 Claims. (Cl. 246—120.)

1. A means for braking an engine approaching a trestle in the event of the trestle being damaged by fire or other causes, comprising a divided trip at one side of a track which crosses the trestle, a rod connected to said trip, levers arranged in opposed pairs pivoted to the sides of the trestle, weighted means connected on the opposed pairs of levers, fusible and brakable plates connected to the under face of the trestle and supporting thereon the weighted means of the confronting pairs of levers and causing the said pairs of levers to assume opposite angular positions, and connecting means between the rod and levers for normally retaining the trip in its lower horizontal position.

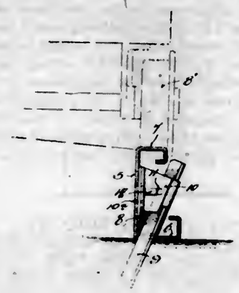


1,348,057. CUTTING ATTACHMENT FOR CIGARETTE-MACHINES. FREDERICK C. SCHOFIELD, Salem, Va., assignor to Comas Cigarette Machine Company, Salem, Va., a Corporation of Virginia. Filed Nov. 4, 1918. Serial No. 261,103. 7 Claims. (Cl. 131—37.)

1. In a device of the character described, the combination of a cutter shaft and its cutter, a casing within which said cutter shaft is eccentrically journaled, means for moving said shaft back and forth within said casing, and means for imparting a rotary motion to said casing and thereby giving an eccentric movement to the cutter shaft.

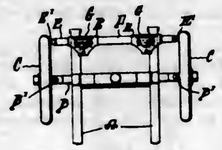
1,348,058. FOOT-PUMP. WILLIAM FORD SERVICE, Poughkeepsie, N. Y., assignor, by mesne assignments, to Charles Hardy and Charles H. Potter, New York, N. Y. Filed July 2, 1917, Serial No. 178,082. Renewed Sept. 30, 1919. Serial No. 327,476. 7 Claims. (Cl. 230—27.)

1. A foot pump, comprising a rigidly mounted cylinder and a piston movable therein, a lever provided with a foot piece and directed backwardly over the cylinder toward the outlet end thereof to close down on the cylinder, said lever being pivotally secured to said cylinder at its opposite end, resilient means to normally hold said lever in raised position, a crosshead reciprocable in said cylinder, attached to said piston and movable to the lever end of the cylinder, and a link forming a toggle connection between said cross head and the foot lever and passing through a slot in a portion of the upper surface of said cylinder to reciprocate the piston when the said foot lever is actuated.



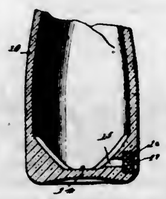
6. A pump comprising a cylinder, a piston movable within the cylinder, an operating lever, a connecting member connected with the lever extending through an opening into the cylinder and into connection with the piston, a pivot pin upon which the lever is mounted, a pair of lugs carried by the cylinder spaced apart and spaced from opposite sides of the lever serving to support the opposite ends of the pivot pin, and resilient means carried by the pivot pin at opposite sides of the lever and between said lugs engaging the lever to serve the double purpose of urging the lever to one position of swing and of retaining the lever in desired relation to the opening into the cylinder.

1,348,059. JAR-LIFTER. ALBERT KENNETH SHEPPARD, Port Moody, British Columbia, Canada. Filed Nov. 25, 1919. Serial No. 340,621. 3 Claims. (Cl. 294—106.)



1. A jar lifter comprising a handle including a rod, a frame slidably mounted upon said rod, a pair of clamping jaws pivotally mounted upon the lower end of said frame, a finger engaging element forming part of the frame, divergently disposed arms projecting from said rod, eyes formed on the adjacent ends of said jaws, and slidably fitted on said arms whereby said jaws are opened and closed by movement of said frame in opposite directions, and coiled springs interposed between said handle and finger engaging element and encircling said rod for the purpose specified.

1,348,060. ANCHOR AND SUPPORT FOR CONCRETE-ROAD FORMS. CLARENCE D. SHEPPARD, Milwaukee, Wis. Filed Dec. 29, 1919. Serial No. 348,092. 6 Claims. (Cl. 238—5.)

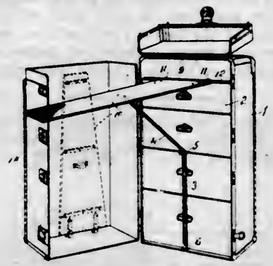


1. The combination with a road form having a lateral support foot, of a channel member secured to the form and inclined downwardly and inwardly toward the juncture of said lateral foot with the body of the form and a stake member insertible in said channel.

1,348,061. AUTOMATIC DIRECTOR FOR HEAD-LIGHTS. ROBERT HARPER SHIVERS, Atlanta, Ga. Filed Jan. 15, 1920. Serial No. 351,536. 8 Claims. (Cl. 240—62.)

1. An automatic director for head lights for wheeled vehicles provided with tires and head lights carried on standards, comprising a sleeve with means for attaching said sleeve to the body frame of the vehicle, a bar of slightly less length than the distance between the adjacent wheels of the vehicle, slidably mounted in said sleeve, said bar being provided at each end with a roller adapted to engage the side face of the adjacent tire, and also with notches to engage the standards of the head lights, boxes connected to said sleeve, and arms pivoted in said boxes and engaging said standards near their lower ends, substantially as described.

1,348,062. CREAM-SEPARATING MILK-BOTTLE. JENNIE M. SHOOK, Phoenix, Ariz. Filed May 5, 1919. Serial No. 294,983. 1 Claim. (Cl. 215—70.)

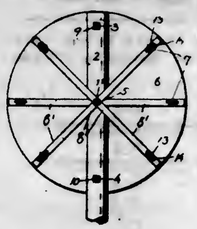


A milk container comprising a body open at its upper end, means for closing said open upper end, means for permitting entrance of air within said body, the lower portion of the wall of said body being thickened at opposite points whereby to form a trough structure, said body being provided with a hole extending horizontally through one of said thickened portions, and a threaded plug normally closing said hole and having its outer end flush with the outer surface of said body, said trough structure serving to conduct milk to said hole.

1,348,063. POLE. JAMES EDWIN SMITH, Pueblo, Colo. Filed Sept. 7, 1918. Serial No. 253,116. 1 Claim. (Cl. 189—23.)

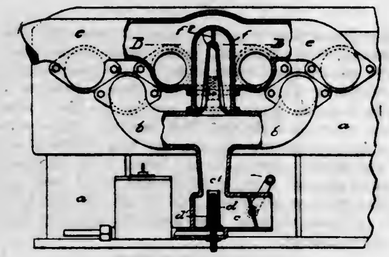
A pole comprising a pair of parallel vertically extending channel iron members, cross strips connecting the members intermediate their ends, a base comprising parallel vertically extending channel iron members, said members being so spaced as to receive the lower ends of the first mentioned channel iron members therebetween, cross strips connecting the channel iron members of the base, and strips secured to the lower ends of the first mentioned channel irom members and upper ends of the base channel iron members, said strips extending transversely of said channel iron members and beyond the outer faces thereof.

1,348,064. IRONING-BOARD. CHAUNCEY I. SPAYD, Kansas City, Mo. Filed Oct. 1, 1919. Serial No. 327,747. 7 Claims. (Cl. 190—13.)



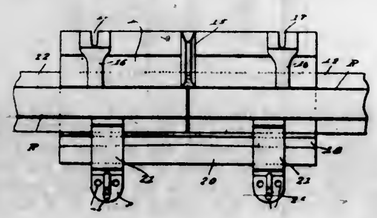
1. In a device of the kind described, a casing provided with one or more drawers, an ironing board having means for attaching to the casing, and a brace having means for attachment to the casing so as to lock the drawers closed, and arranged, when in the unlocked position, to engage and support the ironing board in a horizontal position.

1,348,065. SIGN. JAMES W. STONEHOUSE, Denver, Colo. Filed Nov. 5, 1919. Serial No. 335,894. 1 Claim. (Cl. 40—145.)



In a sign, a post, having a perforation, a planular sign face in contact with said post and having a central perforation, a plurality of angularly related diametric strut braces each adjustably secured at each end to opposite marginal portions of said sign face, engaging the post

upon the side thereof opposite to said sign and having a central perforation, and a bolt engaging the perforations

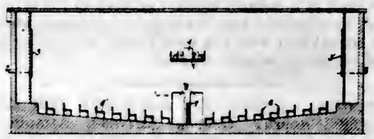


of said sign, said post and said braces and adapted to adjust the sign and braces relatively, to draw them together and hold them in contact with said post.

1,348,066. METHOD OF FURNISHING EXPLOSIVE MIXTURE TO INTERNAL-COMBUSTION ENGINES. PERCIVAL S. TICE, Detroit, Mich. Continuation of application Serial No. 199,349, filed Oct. 23, 1917, which was a division of application No. 101,457, filed June 3, 1916. Shis application filed May 26, 1919. Serial No. 300,006. 3 Claims. (Cl. 123—122.)

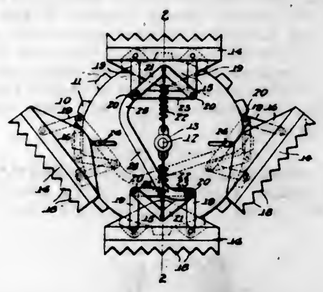
1. The method of furnishing an explosive mixture to an internal combustion engine which consists in first producing by the suction of the engine a rich mixture of liquid fuel and air at substantially normal temperature by aspiration; and next heating such rich mixture to the vaporizing point of the liquid fuel particles, and finally, thoroughly intermixing such vaporized mixture with an additional quantity of air at a lower temperature.

1,348,067. RAIL-JOINT. JOSEPH TAKACS, Westville, Ill. Filed July 26, 1919. Serial No. 313,442. 1 Claim. (Cl. 238—198.)



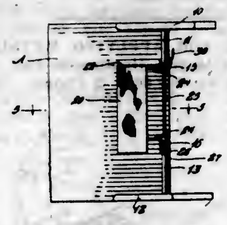
A rail joint comprising a chair including a base plate, a connecting bar extending inwardly and upwardly from one edge of the base plate over the base flange of the rail and entering the fishing space of the latter for contact with the rail web, a T-shaped flange extending along the opposite edge of the base plate, a clamp removably positioned at each end of the T-shaped flange and slidably engaging the latter for contact with the adjacent face of the rail web and an extension provided on each clamp and adapted to be secured to the ties of a road bed.

1,348,068. PROCESS FOR THE TREATMENT OF MANGANESE ORES. GEORGE D. VAN ARSDALE and CHARLES G. MAIER, New York, N. Y. Filed May 9, 1918. Serial No. 233,545. 8 Claims. (Cl. 23—13.)



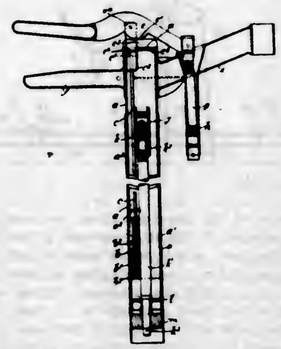
1. That step in a process for the treatment of ores containing manganese and also containing small quantities of other metalliferous substances, the sulfur salts of which are water soluble and capable of acting as sintering agents, for the extraction of the manganese in form suitable for metallurgical use, which comprises subjecting the ore or the like, suspended in water, to the action of an oxid of sulfur capable of converting the manganese content and the said other metalliferous contents into water soluble salts.

1,348,069. MOVING-PICTURE THEATER. EDWIN W. VAN FLEET, Los Angeles, Calif., assignor of one-half to Donato Cozzolino, Los Angeles, Calif. Filed Apr. 7, 1917. Serial No. 160,418. 2 Claims. (Cl. 88—24.)



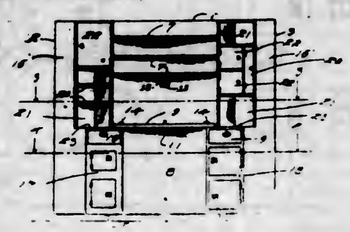
1. In a moving picture theater, facing receiving screens, a series of rows of chairs facing each of the screens, a partition separating the series of rows facing the opposite screens, the series of rows facing the screens being located on the side of the partition remote from the screen the rows are facing, and a platform above the partitions adapted to receive the means for projecting images on the screens.

1,348,070. TRACTOR-WHEEL. FLETCHER W. WHITAKER, Memphis, Tenn. Filed Aug. 9, 1918. Serial No. 249,150. 1 Claim. (Cl. 305—11.)



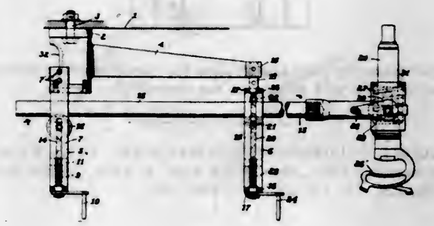
The combination of a tractor wheel having a toothed periphery; of shoes arranged in oppositely disposed co-acting pairs on the wheel, said shoes having their inner faces channeled and the inner walls of the channels notched to receive the teeth of the wheel, links arranged in pairs pivotally connected to the respective shoes, an angle plate pivoted to the links, a strap having its ends connected by the last mentioned pivots of the links and angle plates of each shoe, a central pivot member on each strap which movably engages with the wheel, an evener bar having offset ends which are pivotally secured to the diagonally opposed links of the respective co-acting shoes and springs connected with the hub of the wheel and with the center of each of the angle plates, all as and for the purpose set forth.

1,348,071. MAIL-BAG CATCHER. JOHN M. WILLIAMS and VERNON E. SMITH, Harlem, Mont. Filed Aug. 22, 1919. Serial No. 319,178. 5 Claims. (Cl. 258—20.)



1. A mail bag catcher comprising a bearing member secured at the upper portion of a car upon the interior thereof, a second bearing member disposed at the lower portion of the car vertically beneath said first named bearing member and including an upstanding tubular portion provided with a cut out portion, a basket structure, a shaft carrying said basket structure and disposable within said bearing members and adapted for rotation whereby to dispose said basket interiorly or exteriorly of the car, and a sleeve journaled upon said tubular portion and provided with a slot adapted to register with the cut away portion in said tubular portion whereby to permit insertion or removal of the lower end of said shaft.

1,348,072. GUN-MOUNTING FOR USE ON AIRCRAFT. ROBERT ALLEN, Caversham, England. Filed June 12, 1917. Serial No. 174,390. 11 Claims. (Cl. 89—40.)



1. In a gun mounting, a main post, an adjustable gun supporting means carried by said post, means coöperating with the post including a hand grip capable of either quickly releasing or fixing the relatively adjustable parts, and resilient counter balancing means for the gun and its equipment.

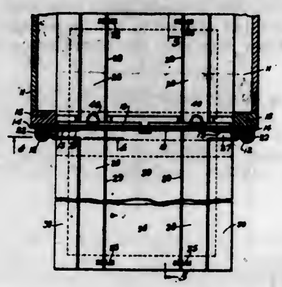
1,348,073. PORTABLE SCREEN. MARIE P. ALMY, Brooklyn, N. Y. Filed Dec. 17, 1919. Serial No. 345,608. 2 Claims. (Cl. 45—106.)

2. The combination of a main central panel having beveled end walls, foldable, hinged side panels having complimentarily beveled walls adjoining the said central panel walls in the operative position and having lower projecting portions whose upper inner ends extend partially across the central panel, and a drop shelf hinged to the main panel and adapted to rest in operative position on the said upper inner ends of said projecting portions.

1,348,074. HOLDER FOR DRILLING AND RIVETING TOOLS. ERNEST SHERWOOD ASTIN, Baltimore, Md., assignor to The Liberty Tool Company, Baltimore, Md., a Corporation of Maryland. Filed Aug. 14, 1919. Serial No. 317,593. 5 Claims. (Cl. 78—50.)

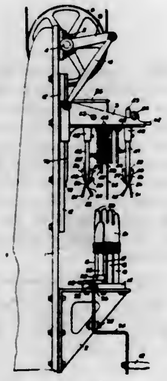
5. In combination, a main supporting member, an arm turnable about said member, hangers extending down from the arm, one hanger being at the outer end of said arm and the other adjacent the supported end of said arm, a vertically movable slide in each hanger and guided thereby a rod supported by the slides, means at the end of the rod for holding a tool, screw shafts mounted in the hangers and engaging the slides, said screw shafts being vertically disposed and adapted to move the slides vertically, and means for turning the screw shafts, substantially as described.

1,348,075. RAIL-JOINT. LAYMAN W. BAILEY, Princeton, W. Va. Filed Nov. 17, 1919. Serial No. 338,426. 3 Claims. (Cl. 238—193.)



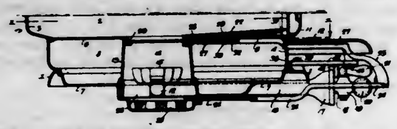
2. A combined rail joint and chair comprising two oppositely disposed rail engaging members having base portions, one of said base portions comprising longitudinally spaced plates with their inner ends diverging toward their free side edges and beveled downwardly and outwardly, the other base portion being in the form of a plate shaped to fit between the plates of the first mentioned base portion the ends of said plate converging toward its free side edge and beveled downwardly and inwardly.

1,348,076. DOOR-OPERATING MECHANISM. JOHN BALOG, Hazleton, Pa. Filed June 5, 1919. Serial No. 301,901. 3 Claims. (Cl. 268—9.)



1. In a door operating mechanism, runways hinged at their longitudinal edges to swing up and down, said runways being of a length to extend across and on each side of the doorway, springs supporting the runways normally in uppermost position, pinties mounted to turn, a

door secured to each pintle, and connections between the free edges of the runways and pintles for operating the

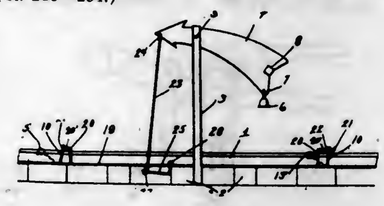


latter from the runways to open the doors in either direction of travel of a vehicle on the runways.

1,348,077. GLOVE-TURNING MACHINE. DAVID BAUM, Livermore Falls, Me. Filed Sept. 6, 1919. Serial No. 322,127. 17 Claims. (Cl. 223—20.)

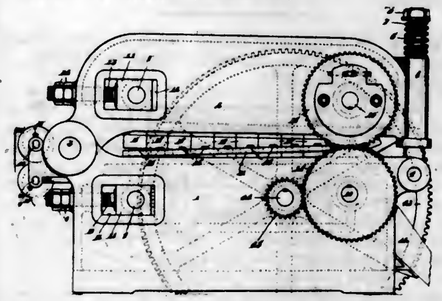
1. A machine of the character stated, comprising a glove support, a movable member, plungers on the movable member adapted to engage the fingers of the glove and force them into the glove support, means for holding the inwardly turned fingers in the glove support, and gripping means on said movable member adapted to grip the wrist portion of the glove and move the same vertically while the finger portions of the glove are thus held.

1,348,078. COMBINED COAL AND GAS RANGE. GEORGE F. BIBB, Troy, N. Y. Filed Mar. 13, 1920. Serial No. 365,567. 7 Claims. (Cl. 126—36.)



1. The combination in a combined coal and gas range, of an oven having a bottom plate therefor, the bottom plate of the range being spaced from the oven bottom plate so as to form a lower flue; a casing located between the two plates and forming the burner chamber; openings in the two plates connecting with the burner chamber; a burner in the chamber; two sliding plates, one adapted to close the opening in the bottom plate of the oven and the other arranged to close the opening below the burner; and means for connecting the two plates so that they will be moved in unison.

1,348,079. TOOL FOR APPLYING METAL RIBBON-LEAF. HERMAN M. BIR, Huntington, Ind. Filed Mar. 2, 1920. Serial No. 362,665. 2 Claims. (Cl. 41—7.)



1. A tool of the character specified comprising a frame embodying laterally extending spindles, plates mounted upon the spindles and adapted to receive between them a guide roller, and a roll of ribbon leaf, and means for retaining the parts on the spindle in the required adjusted position.

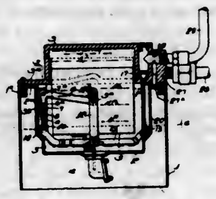
1,348,080. RAILWAY-SIGNAL. NUMA J. BOURGE, Erath, La. Filed Nov. 27, 1916. Serial No. 133,724. 5 Claims. (Cl. 246—294.)

4. In a device of the class described the combination of a supporting member, a signaling element pivotally mounted upon said member, a bell crank lever, a rod connected to said bell crank lever, a rod signaling element, a second rod connected to said bell crank lever, said last mentioned rod having upwardly bent portions at its ends, said ends terminating in horizontally extended portions and means connected to said horizontally extended portions shifting said last mentioned rod.

1,348,081. CONFECTIONERY-MACHINE. EMIL J. BRACH, Chicago, Ill. Filed Feb. 2, 1917. Serial No. 146,257. 2 Claims. (Cl. 107—8.)

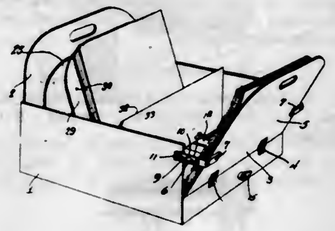
1. The combination with a machine of the class described, of adjustable means for controlling the thickness of a strip of material fed into said machine, said means comprising two coöperating rotatably adjustable wheels having eccentrically formed channels in the peripheries thereof; means for holding said wheels against rotation in the operation of the machine; and means for drawing the material between said wheels, substantially as described.

1,348,082. BUILDING MATERIAL. HERMAN A. BROCKHAUS, Woodward, Okla. Filed Dec. 15, 1919. Serial No. 344,838. 1 Claim. (Cl. 154—45.9.)



As an article of manufacture, a wall board including a metallic sheet, a layer of cement applied to one side of the sheet, and having asbestos fiber embedded therein, and a sheet of fabric secured to the other side of the layer of cement for securing the cement and the asbestos fiber embedded therein to the metallic sheet.

1,348,083. SCARFPIN. GEORGE W. BUGGELN, East Orange, N. J. Filed Apr. 23, 1920. Serial No. 376,125. 3 Claims. (Cl. 24—85.)



1. An article of the type set forth comprising a split ring-like band adapted to surround a necktie, and a scarf pin carried by the band, said pin being secured to the band intermediate the ends of the latter and including an inwardly extending portion which extends into the band and a portion which is directed downwardly and at right angles to said inwardly extending portion.

1,348,084. VACUUM FUEL-FEED DEVICE. CHARLES S. BURTON, Oak Park, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Aug. 16, 1918. Serial No. 250,115. 8 Claims. (Cl. 158—36.)

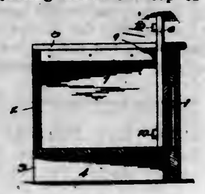
1. In a vacuum fuel feed device comprising a vacuum chamber and a reserve chamber, the vacuum chamber having the following fluid connections, viz: (1) a fuel supply inlet, (2) a fuel supply outlet to the reserve chamber, (3) a suction outlet, and (4) an atmosphere inlet; means in the vacuum chamber for alternating the dominance of suction and pressure comprising a buoy mounted for movement by change of liquid level in said vacuum chamber; a valve device controlling certain of said fluid connections, and operating connections to the valve device from the buoy comprising a snap-action spring, the buoy being positively connected operatively with the valve device independently of the snap-action spring; said operating connections containing a lost motion joint; the snap-action spring being connected for its tensioning by the movement of the buoy through the range of said lost motion.

1,348,085. POSTING-TRAY FOR MACHINE-BOOK-KEEPING. EZRA LYMAN CATHCART, St. Paul, Minn. Filed July 17, 1919. Serial No. 311,474. 6 Claims. (Cl. 129—16.)

1. A posting tray comprising a casing having a hingedly mounted front panel, a follow-block mounted within the casing, and adapted to be moved toward and away from the ends thereof, and a freely movable angularly disposed integral upset member mounted within the casing.

5. A posting tray comprising a casing having an elevated bottom wall to provide a lower space, longitudinally movable members disposed above the bottom wall, the said bottom wall having slots formed therein, rails adapted to be raised and lowered to project above and below the bottom wall through the said slot, and means to raise and lower the said rails.

1,348,086. TOY FORT. HARRY EDWARD COATES, Sacramento, Calif. Filed Nov. 20, 1919. Serial No. 339,409. 6 Claims. (Cl. 46—59.)

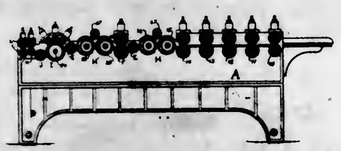


1. A toy fort including a structure, a gun mounted thereon, a figure movably mounted to be given a position below the top of the fort to be concealed or to emerge therefrom to simulate a gunner manning the gun, means to move said figure to the emerged position, means to cause the discharge of the gun with the emergence of the figure, and means to restrain or release the figure.

1,348,087. STORE-COUNTER. FRED HAMDEN COLE, Yuma, Colo. Filed Oct. 6, 1919. Serial No. 328,776. 1 Claim. (Cl. 211—11.)

A store counter comprising a casing divided by transverse vertical partitions into a plurality of similar compartments, cleats secured in each compartment at the opposite sides thereof, near the top, and forming guides, a rigid cover slidable on the cleats in each compartment and provided with a handle, the cleats being cut away at one side of the casing and rounded to permit the cover to tilt

downwardly into the compartments and to assume an upright position, the rounded ends of the cleats serving to retain the cover in vertical position, with the handled end thereof projecting above the top of the casing, and

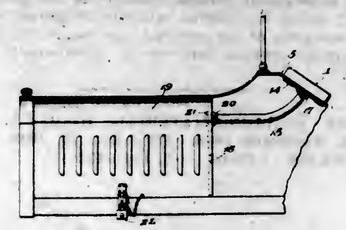


cleats secured upon the under side of each cover and engaging against the inner surface of the casing when the cover is in closed position, whereby to prevent the cover from being slid off the casing.

1,348,088. VALVE. SIMON J. CONNELL, Brooklyn, N. Y. Filed Dec. 20, 1919. Serial No. 346,245. 9 Claims. (Cl. 251—9.)

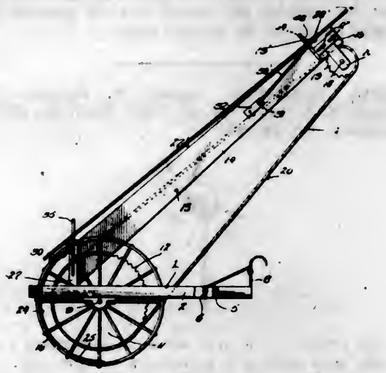
1. A valve of the character described, comprising two members, one member consisting of a tubular journal having ports therein, a reduced extension on one end of the tubular journal, a key on the extension, the other of said members having rings fitting the journal, webs connecting the rings and comprising valves controlling the ports, and a ring on the last-mentioned member fitting the extension and having a keyway therein movable over said key.

1,348,089. FLAX-MACHINE. CLAYTON G. COOKE, New Haven, Conn., assignor to American Linen Fibre Company, Wilmington, Del., a Corporation of Delaware. Filed June 21, 1912. Serial No. 705,071. 40 Claims. (Cl. 13—21.)



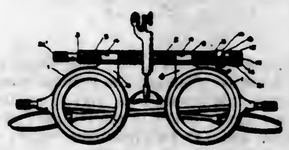
8. The combination of breaking means, a group of heckling devices to heckle the straw emerging from said breaking means, a second group of heckling devices, located in advance of the first group, and a pair of spirally fluted rolls interposed between said groups and driven at such a speed as to pull the straw through one or more heckling devices of the first group, and to hold the straw while it is heckled by one or more devices of the second group; substantially as described.

40. The method of decorticating flax and other fibrous stock, which comprises breaking the straw along transverse lines, then heckling it, then twisting the individual lengths of heckled straw to remove some of the adhering portions of the shive, and then re-heckling the stock while the twist remains therein; substantially as described.



1,348,090. MEANS FOR LOCKING ELECTRIC SWITCHES ON AUTOMOBILES. EDWARD COOPER, Cheyenne, Wyo. Filed Feb. 6, 1920. Serial No. 356,600. 4 Claims. (Cl. 180—82.)

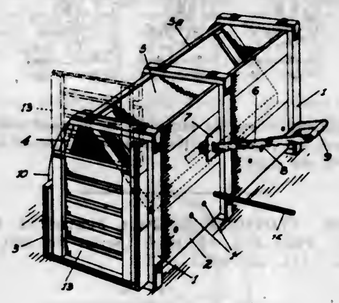
1. The combination of a back wall of an engine hood, a dash, a switch mounted upon the dash, a conductor leading from the switch into the engine hood, a housing mounted upon the dash and inclosing the switch and pro-



vided with a door having a lock, and a pipe or conduit receiving the conductor and connected at opposite ends to the dash and the back wall of the engine hood.

1,348,091. HAY-LOADER. RUSSELL A. CRANDALL, Buttonwillow, Calif. Filed Nov. 18, 1918. Serial No. 262,324. 2 Claims. (Cl. 56—360.)

1. In a machine of the class described, a main frame, supporting wheels therefor, a drum mounted for rotation with said wheels in said frame, an inclined conveyer frame, an endless conveyer engaging said drum, rake teeth arranged in rear of the drum, a fender arranged above the conveyer and for vertical movement toward and from the conveyer to accommodate itself to the quantity of material thereon, said rake teeth having a head provided with guides for said fender, standards in which said head is vertically adjustable, means adjustably fixing the head to the standards, and means adjustably fixing the standards to the main frame, whereby the rake teeth may be positioned relatively to the periphery of the drum.



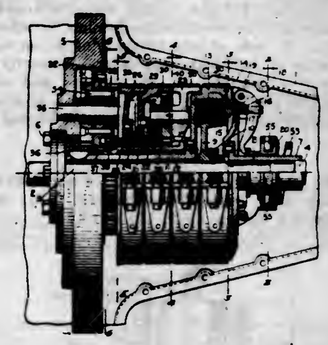
1,348,092. EYE-TESTING INSTRUMENT. GEORGE H. DAY, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Dec. 26, 1917. Serial No. 208,938. 6 Claims. (Cl. 88—20.)

1. A trial frame including a longitudinal bar, adjustable rods carried by the bar, lens frames suspended from

the rods, clutch faces formed on the inner ends of said rods and means whereby to engage and disengage the clutch faces to rotate said rods separately or simultaneously.

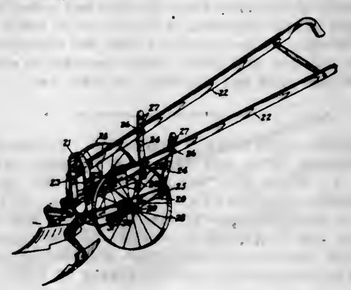
1,348,093. HOG-BOX. WILLIAM A. D'EGILBERT and BEN GARLAND, Willows, Calif. Filed Sept. 3, 1919. Serial No. 321,393. 3 Claims. (Cl. 119—98.)

1. A hog box comprising side walls, slidable end gates, doors between the walls at one edge thereof, and a clamping board inside the box hinged to one of the walls on the opposite edge thereof from the doors, and extending lengthwise of the walls, and adapted to squeeze and clamp the body of a hog between the same and the wall to which it is hinged.



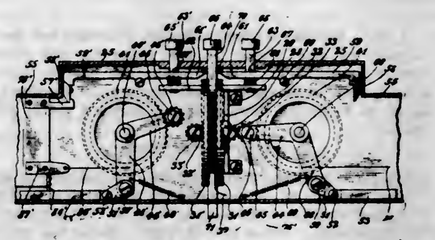
1,348,094. LIFE-PRESERVER HELMET. DOMENICO DEL RE, Iron River, Mich. Original application filed July 13, 1918, Serial No. 244,781. Divided and this application filed Dec. 21, 1918. Serial No. 267,827. 5 Claims. (Cl. 128—141.)

1. A life preserver helmet structure comprising a body member of a size to inclose the head, said helmet structure having a contractible neck receiving portion, and a snout projecting from the front of the helmet and terminating in a short pipe extension of relatively small cross sectional area having a downward curvature toward the wearer, the snout containing a body of pervious absorbent material.



1,348,095. PLANETARY GEARING. SMITH V. DICKMAN, Shavertown, N. Y. Filed Aug. 25, 1919. Serial No. 319,539. 4 Claims. (Cl. 74—34.)

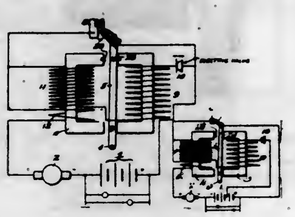
1. The combination with a drive shaft and a driven shaft, of a sleeve on the drive shaft, a drum on the sleeve, a ring secured to the drum, a disk secured to the drive shaft, friction disks between the disk and drum, plungers carried by the ring, pivotally supported arms engaging the plungers to force the friction disks together, a sliding collar for operating said arms, a sleeve on the driven shaft secured to the ring whereby motion may be transmitted from either the disk or the drum to the driven shaft, three nested sleeves on the first-mentioned sleeve, drums on all of said sleeves, pinions carried by the flywheel, pinions on two of said last-mentioned sleeves and on said first-mentioned sleeve meshing with said pinions, a second pinion on the opposite end of one of said sleeves,



pinions carried by one of said drums and meshing with internal gear of drum and gear on sleeve, and means for holding any of said drums against movement.

1,348,096. GARDEN-TOOL. JAMES ELLIS DODD, Peoria, Ill. Filed Feb. 18, 1920. Serial No. 359,485. 3 Claims. (Cl. 97—42.)

1. In a garden tool comprising a wheeled frame having guiding handles and ground working members, of a support for said members consisting of a slotted horizontal arm projecting obliquely to the frame on the outside thereof in advance of the wheel, said arm having an offset upstanding lug with a face oblique to the arm bearing against said wheeled frame and secured thereto to hold the arm immovable.

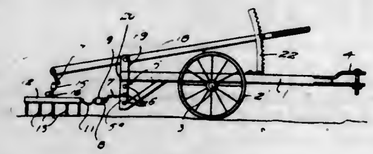


1,348,097. AUTOMOBILE-SIGNAL. FRANK J. DORAN and OTTO H. KIRCHNER, Hoboken, N. J. Filed Oct. 8, 1919. Serial No. 329,404. 2 Claims. (Cl. 116—50.)

1. A direction indicator comprising a casing, guide arms extending oppositely therefrom, slides movable in said

arms, springs actuated means for extending said slides, detents engageable with said slides when retracted, manually operable means for releasing said detents, geared drums rotatable in said casing, cords attached to said slides adapted to be wound on said drums, bell-crank levers pivoted on the axis of said drums, pinions carried by one of the arms of said bell-crank levers, manually operable gear trains engageable by said pinions, and means for shifting said pinions into mesh therewith said means becoming operative upon the full extension of said slides.

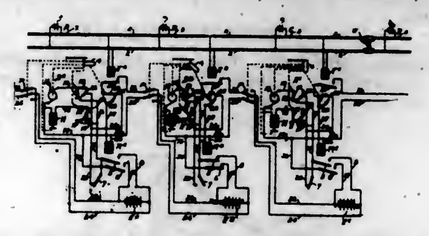
1,348,098. AUTOMATIC SWITCH. CARL W. EISENMANN, Nebraska City, Nebr. Filed June 16, 1916. Serial No. 103,996. 4 Claims. (Cl. 171—314.)



2. The combination of a storage battery; a generator for charging the same; a switch for controlling the connection of the generator and battery; and operating means for said switch consisting of three coils in series between one terminal of the generator and the battery terminal of like polarity, said switch being connected in series with one of said coils and shunting the other two.

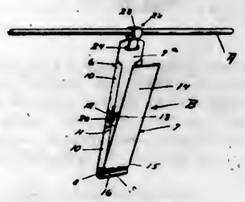
1,348,099. CONCRETE-HARDENING. CARLETON ELLIS, Montclair, N. J., and HERMAN S. RIEDERER, New York, N. Y. Filed Mar. 23, 1915. Serial No. 16,428. 3 Claims. (Cl. 106—24.)

1. A structural mass of concrete formed with Portland cement and containing a superficial layer carrying distributed therethrough copperized granules of iron of a fineness approximately between 15 and 25 mesh.



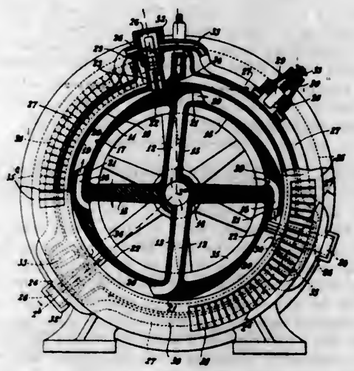
1,348,100. HARROW. MANUEL BRAGA FERNANDES, Jr., Lihue, Hawaii, assignor of one-fourth to Manuel B. Fernandes, Sr., Lihue, Hawaii. Filed May 23, 1919. Serial No. 299,098. 3 Claims. (Cl. 55—88.)

1. In a harrow, a portable frame, a pulling bar flexibly secured to said frame at the rearward end thereof, and a plurality of flexibly connected harrow sections flexibly secured at their forward ends to said pulling bar so as to be drawn thereby during forward travel of the frame.



1,348,101. RAILWAY SIGNALING. FREDERICK T. FEREDAY, Albany, N. Y., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Dec. 2, 1918. Serial No. 264,910. 5 Claims. (Cl. 246—53.)

2. Apparatus of the type comprising a signal, a signal relay for controlling said signal, and a circuit for said relay including a source of current, characterized by the combination therewith of means controlled by said signal



and operating when the signal is in proceed position to disconnect the relay from its circuit and connect said circuit with the signal.

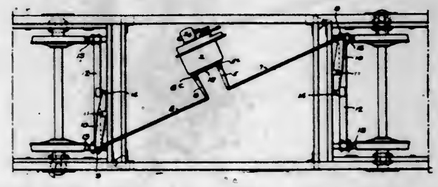
1,348,102. CLOTHESPIN. PAUL FREYHOLTZ, Fairfax, Minn. Filed Aug. 16, 1918. Serial No. 250,184. 1 Claim. (Cl. 24—137.)

A clothes pin comprising a pair of members each formed as a plate terminating at one end in a rolled edge, ears on the side edges of the said plates intermediate the ends thereof and pivotally connected, a spring disposed between and engaging said plates for urging said rolled edges into clamping engagement, and a reduced extension formed on the other end of one of said plates and reflexly bent to provide an attaching loop whereby to provide suspension means for supporting the device from a clothes line, the axis of said loop being parallel with said rolled edges.

1,348,103. ROTARY INTERNAL-COMBUSTION ENGINE. JOHN WILLIAM GEORGE, Stroud Green, England. Filed Oct. 16, 1918. Serial No. 258,411. 4 Claims. (Cl. 60—41.)

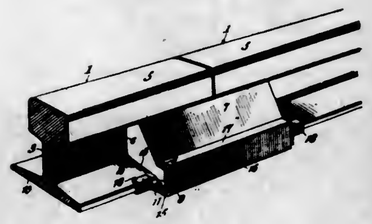
1. A rotary internal combustion engine comprising, an outer casing provided with transverse combustion chambers, said casing having substantially radial openings extending inwardly through its periphery and ports disposed near and forwardly of said openings and leading into the combustion chambers, substantially radial vanes mounted to reciprocate in said openings and projecting into the interior of the casing, and a rotor mounted within the casing and having a plurality of abutments to co-act with the vanes for forming compression chambers within the casing, said compression chambers having communication with the combustion chambers through the medium of the said ports, alternate abutments having gas supply openings extending through the rear ends thereof and alternate abutments having air supply openings extending through the rear ends thereof.

1,348,104. ELECTRIC SIDE LIGHT. RICHARD S. GIESE, Pittsburgh, Pa. Filed Feb. 26, 1919. Serial No. 279,370. 6 Claims. (Cl. 240—73.)



1. An electric side light fixture, comprising a one-piece glass shade of substantially semi-ellipsoid form having the rear face open and the rear edge in one plane and adapted to lie flat against a wall, said shade being of a length, width and depth to snugly inclose an incandescent electric lamp-bulb, and said shade having a passage therethrough near one end thereof, supporting means for the electric lamp bulb within the shade, and means for carrying both the supporting means for the lamp bulb and the shade, said means traversing the passage through the shade to carry the fixture pendently.

1,348,105. CUSHION-TIRE. GEORGE MADISON GOUDY, Goshen, Ind. Filed Feb. 13, 1920. Serial No. 358,468. 4 Claims. (Cl. 152—8.)

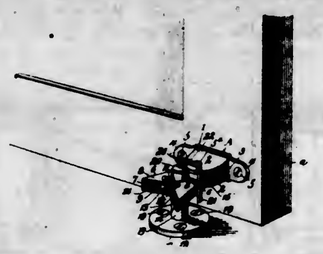


1. In combination with a wheel rim having openings formed therein, a cushion tire including a casing, a plurality of independent sections positioned within the casing, each of said sections including a relatively wide metallic spring member, a supporting block having connection with the metallic spring member, a yoke positioned over the supporting block, said yoke having arms contacting with the rim, means extending through the rim and supporting block and contacting with the yoke for forcing the block away from the rim.

1,348,106. BRAKE. JAMES T. HALSEY, Philadelphia, Pa.; Sue Mason Maury Halsey, Philadelphia, Pa., administratrix of said James T. Halsey, deceased. Filed Aug. 15, 1913, Serial No. 784,975. Renewed Nov. 28, 1917. Serial No. 204,476. 8 Claims. (Cl. 188—171.)

1. The combination of brake shoes for effecting stoppage of a movable member, means for supporting the same in active position, a spring for holding said shoes in braking engagement, a second spring arranged to react upon the first-named spring to render inactive the force of said spring to effect release of the braking engagement of said shoes, means including a train of gearing to effect the action of said second spring, and a motor for operating said gearing.

1,348,107. RAIL-JOINT. SAMUEL A. HAMMONS, Leesville, La. Filed Jan. 28, 1920. Serial No. 354,717. 3 Claims. (Cl. 283—188.)



1. A boltless rail joint comprising a pair of identical wedging blocks or side members adapted to lie at opposite sides of the webs abutting rail ends and beneath the head of the rail, each block having a longitudinal cavity extending throughout its length for receiving the adjacent base flange of the rail, the upper walls of said cavities being spaced from the upper faces of the said flanges, the lower portions of the blocks below the cavities comprising tapered tongues extending toward but spaced from each other below the rail flanges, and means passing beneath the rail and embracing the blocks at the base and connecting the same together, the said blocks being adapted to have a rocking movement, when under a load, to clamp the rails and hold the same in position.

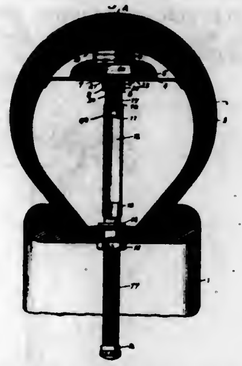
1,348,108. COMBINED DOOR HOLDER AND STOP. HARRY HARDEN, London, Ohio. Filed Oct. 6, 1919. Serial No. 328,703. 6 Claims. (Cl. 292—18.)

1. In a holding device, the combination with a jaw carrying member having spaced ears and a pivot pin connecting said ears, of a pair of jaws mounted near their inner ends between said ears on said pin, said jaws extending outwardly from said ears, with their outer ends flared outwardly, a pair of rollers mounted in said jaws at the inner end of the flared portion and normally in engagement with each other, a pair of seats formed in each

of said jaws in rear of said rollers, a spring housed within the jaws and ears in rear of said seats and serving

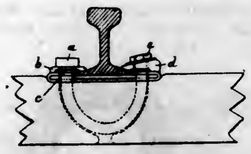
to force the rollers together, and a keeper adapted to be engaged with the seats of said jaws.

1,348,109. VEHICLE-SHAFT SUPPORT. HARRY HARDEN, London, Ohio. Filed Oct. 6, 1919. Serial No. 328,704. 5 Claims. (Cl. 21—108.)



1. In combination with the dashboard of a vehicle, a vertically disposed supporting bar extending along one face of the dashboard, means for securing the bar to the dashboard, means for supporting the shafts of the vehicle, said means consisting of one part secured rigidly to the said bar and a coöperating part connected to the shafts of the vehicle, and means locking the two parts of the supporting means together.

1,348,110. STILT. WILLIAM S. HASSKARL, Philadelphia, Pa. Filed Aug. 25, 1919. Serial No. 319,541. 1 Claim. (Cl. 135—53.2.)

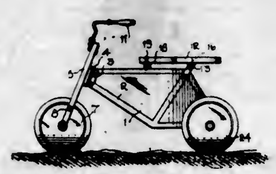


An adjustable foot rest for a stilt compriaing a collar mounted to slide on the stilt, a foot piece extending from the collar, a clamping member disposed between one side of the collar and the adjacent side of the stilt, spaced vertically disposed ribs formed on the opposed side of the collar to engage the adjacent face of the stilt, transversely disposed ribs carried by the clamping member to engage the adjacent face of the stilt above and below the terminals of the vertical ribs, a screw on the collar and adapted to engage the clamping member for moving the latter into engagement with the face of the stilt, and simultaneously adjusting the collar to hold the latter in fixed relation upon the stilt.

1,348,111. PNEUMATIC-TIRE INFLATER. EUGENE S. HAYFORD, New Orleans, La. Filed Oct. 9, 1919. Serial No. 329,461. 1 Claim. (Cl. 152—11.)

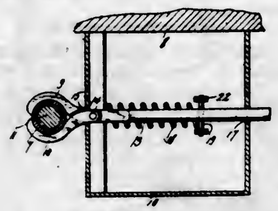
The combination of a casing, an inner tube arranged in said casing and means communicating with the inner tube for inflating the same, said means comprising a cup-shaped member, a flexible portion to which the member is secured, a chamber formed in the member, a cylinder that is movable longitudinally in the chamber, and an air inlet and outlet orifice communicating with the chamber whereby on inward movement of the cylinder, air will be forced from the chamber into the inner tube, and on outward movement of the cylinder, air will be drawn into the chamber, and means communicating with one end of the chamber for closing the inlet orifice thereof.

1,348,112. RAIL-FASTENING. CHARLES ALBERT HENRY, Paris, France. Filed Apr. 28, 1920. Serial No. 377,268. 5 Claims. (Cl. 238—265.)



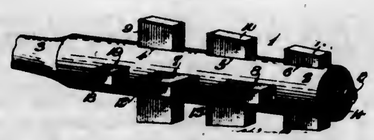
1. A fastening device for fixing metallic members on to reinforced concrete, comprising: a bolt with a curved stem approximately semi-circular in shape, a part of reinforced concrete, a semi-circular tubular channel providing in the concrete during molding, two clamps adapted to grip the metallic member, each clamp having a perforation for the stem of said bolt, and means for tightening said member on to said concrete.

1,348,113. CHILD'S VELOCIPEDE. HARRY H. HISTAND, Doylestown, Pa. Filed Dec. 14, 1918. Serial No. 266,762. 4 Claims. (Cl. 208—165.)



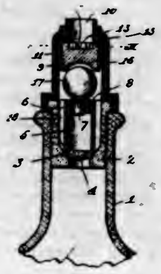
1. A child's velocipede comprising an upright body, a ground wheel supporting the forward end of the body, a

ground wheel supporting the rear end of the body, a pillow block straddling the upper edge of the body and secured to the said body, a seat disposed at its rear portion upon the upper edge of the pillow block and secured



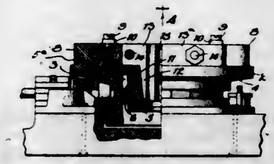
thereto, a post disposed between the under side of the seat at the forward portion thereof and the upper edge of the said body, and a fastening means secured through the seat and post and into the body.

1,348,114. AUTOMATIC VESTIBULE-CURTAIN HOLDER. CHARLES M. HOFFMAN and JOSEPH THOMISSER, Chicago, Ill. Filed Sept. 28, 1918. Serial No. 256,107. 1 Claim. (Cl. 105—25.)



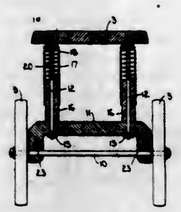
A holding device comprising a support having an opening, a slidable shank carried by the support and seating in the opening, a fixed jaw on the outer end of the shank, a jaw pivoted to the shank and positioned opposite the fixed jaw, the outer side edge of the pivoted jaw engaging the edge of the opening and being non-parallel to the axis of the shank, whereby said jaw is forced by said edge toward the fixed jaw when the shank is slid in one direction, and a hand lever pivoted to the support and connected to the shank for sliding the same in the opposite direction.

1,348,115. REVERSIBLE-TAPER ROUGHING-REAMER. MORTON C. HUTCHINSON, Woodbury, N. J., assignor of one-half to Leon G. Buckwalter, Merchantville, N. J. Filed Aug. 31, 1918. Serial No. 252,136. 6 Claims. (Cl. 77—72.)



1. A reversible taper reamer, comprising a bar having two sets of slots therein at right angles to each other, detachable cutters located in said slots, and locking means for the inner and outer of said cutters, the edges of said inner and outer and intermediate cutters being interlocked with each other.

1,348,116. BOTTLE-VALVE. GILBERT JACKSON, New York, N. Y. Filed Dec. 6, 1916, Serial No. 135,848. Renewed Feb. 1, 1919. Serial No. 274,566. 6 Claims. (Cl. 215—69.)



5. The combination with a bottle; of a stopper disposed in the neck thereof and a pneumatically controlled valve in said stopper to prevent unauthorized refilling of the bottle.

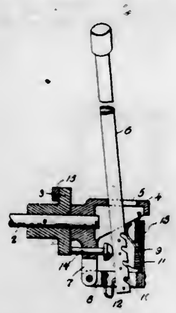
1,348,117. ROTARY-DRILL HEAD. HORACE G. JOHNSTON, Corsicana, Tex., assignor to Genevieve Johnston, Corsicana, Tex. Filed Aug. 6, 1919. Serial No. 315,776. 5 Claims. (Cl. 255—23.)

1. In a rotary drill operating mechanism, a turn-table having a central opening, a bushing rotatably mounted concentrically of said table, a clamp engaging means on the turn-table, a divided clamp adapted to be engaged by said clamp engaging means on the table, and means on the bushing for engaging said divided clamp to keep the same from spreading.

1,348,118. CHILD'S CAR. JOHN C. JUTHE, Allston, Mass. Filed July 29, 1919. Serial No. 314,059. 4 Claims. (Cl. 208—165.)

1. A child's car comprising a frame having a seat at the rear and supported by front and rear wheels, a bolster in which the rear wheels are mounted, a vertical guide rod connecting the frame and bolster having a sliding fit to permit the frame and bolster to move toward and from each other, a pair of telescoping members guided by said rod and abutting respectively the frame and said bolster, and an extension spring inclosed by said members.

1,348,119. SCRAPER. JOHN KALIVODA, Cuba, Kans. Filed Sept. 26, 1919. Serial No. 326,423. 4 Claims. (Cl. 37—5.)

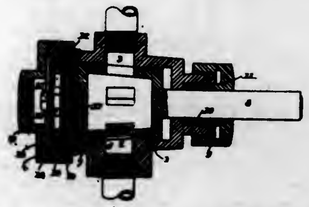


1. A road scraper comprising a platform, elongated bearing members disposed upon the underside thereof at its edges, a laterally inclined blade carried at one end of the platform, bearing blocks slidably adjustable within said bearings, a roller having the ends of its axle engaged within said blocks, and set screws extending into opposite sides of said first named bearing members and engaging said blocks whereby to vary the angular position of the roller.

1,348,120. SCARFPIN-HOLDER. ALPHONSO KESSLER, Dunkirk, N. Y. Filed June 7, 1918. Serial No. 238,716. 1 Claim. (Cl. 24—155.)

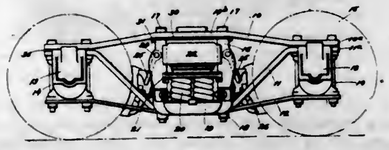
A scarf pin holder comprising a flat piece of spring metal, including a body portion arranged parallel to the pin, one end of the body portion being disposed at an inclination to the pin and having an opening for the reception of the latter said opening having its axis obliquely disposed with respect to the pin, the opposite end of the body portion being disposed at a right angle and terminating to provide a duplex hook, the hook portions being arranged opposite the adjacent longitudinal edges of the body portion for the purpose specified.

1,348,121. MOTORCYCLE BACKREST. CHARLES KUDERER, Pittsburgh, Pa. Filed Dec. 9, 1918. Serial No. 265,893. 8 Claims. (Cl. 208—138.)



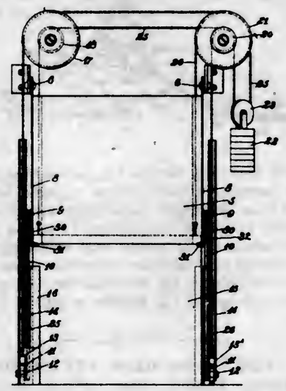
1. In a device of the character described, a fixed member, a bracket movable about the same, a supporting member rockably connected to the bracket, and coöperating means carried by said fixed member and the bracket for moving said supporting member into predetermined position about its axis of rocking movement and holding it in this position when the bracket is turned into a predetermined position about the fixed member.

1,348,122. DEMOUNTABLE RIM. PETER S. LARSON, Beloit, Wis. Filed June 16, 1919. Serial No. 304,610. 1 Claim. (Cl. 301—35.)



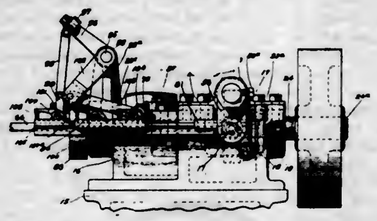
A demountable rim having a bead-engaging flange on one edge and an inwardly extending flange on its other edge, a removable bead-engaging ring contacting with the outer side of said inwardly extending flange, the two having alined openings, threaded shanks passing through said openings and having cylindrical heads on their inner ends axially alined with said shanks and abutting said inwardly extending flange, one side of each head being flattened and contacting non-rotatably with the rim, the opposite side of each head being beveled at its inner end for contact with a felly-band to guide the rim onto a wheel, nuts threaded on the outer ends of said shanks to hold the aforesaid bead-engaging ring in place, and projections on the rim bearing against the inner ends of said heads to prevent accidental removal of the shanks from their receiving openings when said nuts are removed.

1,348,123. AIR-VALVE. GEORGE F. MUTH, Philadelphia, Pa., assignor to Newton Machine Tool Works, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 8, 1919. Serial No. 270,189. 2 Claims. (Cl. 251—98.)



1. The combination in a valve, of a casing having ports and having a tapered valve seat, said valve casing having a stuffing box at one end and an extension at the opposite end; a tapered valve adapted to the tapered seat in the casing and having an operating stem extending through the stuffing box, the extension of the casing having an external and an internal thread; a partition having a thread on its periphery adapted to the internal thread; a set screw extending through the partition and bearing against the valve; a cap having a thread adapted to the external thread of the extension; and a gasket between the cap and the end of the extension.

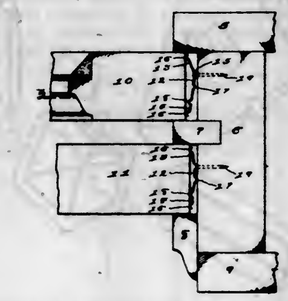
1,348,124. CAR-TRUCK. EDWARD POSSON, Chicago, Ill. Filed July 6, 1917. Serial No. 178,890. 6 Claims. (Cl. 105—207.)



1. In a car truck, a side frame comprising upper and lower arch bars and side columns extending between said arch bars, spacing plates inserted between adjacent ends of said arch bars and between the ends of said side columns and said upper arch bar, means carried by one of said plates to prevent spreading of said side columns, and means for securing said parts together.

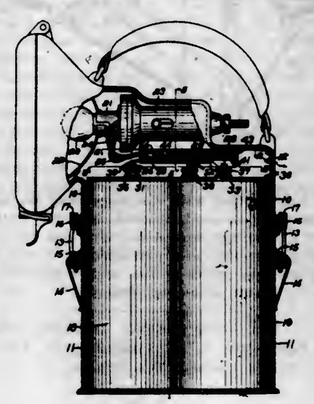
1,348,125. COMBINED HINGED AND SLIDING DOOR. ALBERT RUSH, Columbus, Ohio, assignor to The Kinnear Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed July 2, 1917. Serial No. 178,302. 2 Claims. (Cl. 20—19.)

1. A door, shutter or the like including, in combination, a hinged upper section, a lower section to slide into connection with the upper section, a pivotal strut hinged at one end to the upper section, a guide in which the other end of the strut travels, flexible means for raising the lower section into coincidence with the upper section and means connected with that end of the strut which travels in the guide for raising the strut and thereby deflecting both sections and counterweighting means supported by said flexible means.



1,348,126. TIE-PLUG MACHINE. LAWRENCE W. WILSON, Burlington, Iowa. Filed Oct. 26, 1916. Serial No. 127,911. 13 Claims. (Cl. 144—196.)

1. In combination, a frame, a ram slidably mounted in a guideway in said frame, a cutting tool carried by said ram, means for operating said ram, a cover plate for maintaining said ram in said guideway, an arm carried by said cover plate and projecting outwardly therefrom above said ram, and a cutting block pivotally mounted on said arm and adapted to normally depend in the path of said cutting tool.

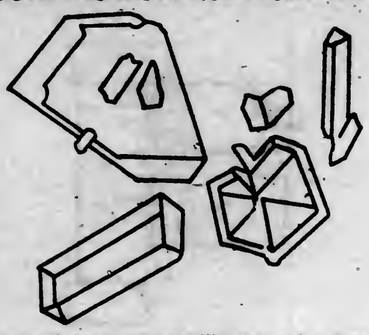


1,348,127. WINDOW. JOSEPH C. DUNHAM, Oklahoma, Okla. Filed Dec. 30, 1919. Serial No. 348,437. 2 Claims. (Cl. 20—69.)

1. A strip of elastic sheet material adapted to be interposed between a sash and jamb, the strip having two longitudinal beads projecting toward the jamb, the strip being so shaped in cross-section that when compressed

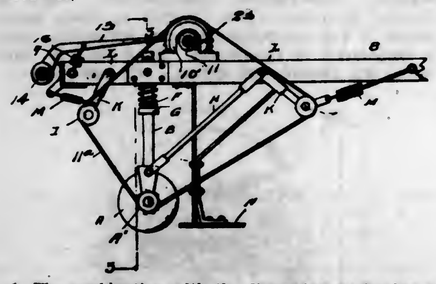
into a given space only one of the beads contacts the jamb but when compressed into smaller space the second bead is brought into contact with the jamb.

1,348,128. ELECTRICAL CONNECTION. JOHN H. GEORGE, Bridgeport, Conn., assignor, by mesne assignments, to The Hawthorne Company, Bridgeport, Conn., a Corporation of Connecticut. Filed June 17, 1918. Serial No. 240,310. 20 Claims. (Cl. 240—8.5.)



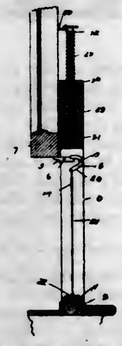
11. In an apparatus of the class described, the combination of a casing comprising two separable parts, a battery carried by one of said casing parts, said battery being provided with terminals, a plate having openings to receive and position said terminals with reference to said casing thereby to present said terminals in substantially predetermined positions, and means carried by the other casing part to establish electrical connection with said terminals by merely uniting said casing parts.

1,348,129. COMPOUND OF TITANIUM AND PROCESS FOR THE MANUFACTURE OF SAME. VICTOR MORITZ GOLDSCHMIDT, Christiania, Norway, assignor, by mesne assignments, to Titan Co. A./S., Christiania, Norway. Filed Oct. 12, 1917. Serial No. 196,327. 27 Claims. (Cl. 134—58.)



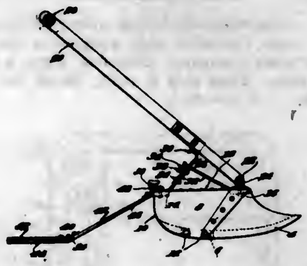
1. The process of effecting crystallization in a titanium compound which consists in heating a compound of titanium until the particles constituting the structure exhibit a crystalline interior structure and a smooth exterior surface.

24. As a new and useful article of manufacture, a complex pigment comprising an oxygen compound of titanium



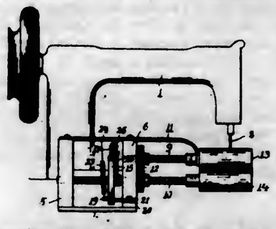
characterized by cryptocrystallization and intermingled therewith a pigment forming compound of another element having a different refractive index therefrom.

1,348,130. CORN-PLANTER. FRANK HEVEL, GROVER C. HARRINGTON, and WILLIAM HEVEL, MCCUNE, Kans. Filed Apr. 1, 1919. Serial No. 286,786. 2 Claims. (Cl. 275—9.)



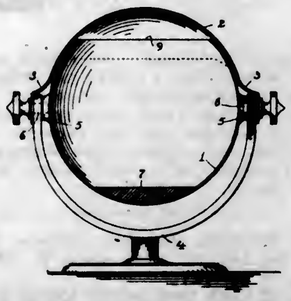
1. The combination with the dispensing mechanism operating shaft of a seed planter, and its slotted draft tongue, of a bearing block swiveled in the slotted tongue and a spring pressed post journaled in the block, and a ground wheel journaled in the post having connections therefrom to the dispensing mechanism.

1,348,131. WINDOW-CLOSING DEVICE. HAROLD I. HUBY, Saylesville, R. I. Filed Feb. 18, 1919. Serial No. 277,747. 5 Claims. (Cl. 268—4.)



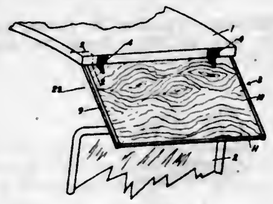
1. A window-closing device comprising a standard adapted to be secured to a window frame, means on said standard for supporting a window in open position, a non-rupturable control member capable of extending its length by hygroscopic action and returning to normal length when dry, and means whereby the elongation of said control member causes said supporting member to release the window to move to closed position.

1,348,132. DEVICE FOR HARVESTING CRANBERRIES. WALDO F. LORING, Duxbury, Mass., assignor of one-half to John B. Hadaway, Swampscott, Mass. Filed Feb. 12, 1919. Serial No. 276,507. 10 Claims. (Cl. 56—330.)



1. A hand operated device for harvesting cranberries or the like having, in combination, a comb for stripping the berries from the vines, means for retaining the berries, a handle extending rearwardly from the device, and connections between the handle and retaining means designed to depress and advance the comb when the handle is pushed forwardly in the direction of its length and to elevate the comb when the handle is pulled in a reverse direction.

1,348,133. SEWING-MACHINE ATTACHMENT. HERBERT THORNE, Boxford, Mass. Filed Dec. 17, 1918. Serial No. 267,122. 3 Claims. (Cl. 112—214.)

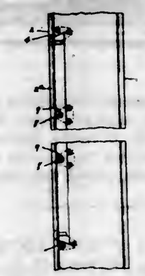


1. The combination with a sewing machine or the like having an intermittent feeding device controlled by a rocker shaft, of a pair of auxiliary feed rolls movable together, a disk rotatable with said rolls, a detent engaging the periphery of said disk, an arm pivoted on the axis of said disk and having its free end controlling said detent, an arm swinging with said rocker shaft, and connection between said swinging arm and detent.

1,348,134. RECEPTACLE. SIDNEY G. BARNSTEAD, Boston, Mass. Filed Aug. 29, 1914, Serial No. 859,208. Renewed April 21, 1920. Serial No. 375,649. 1 Claim. (Cl. 211—6.)

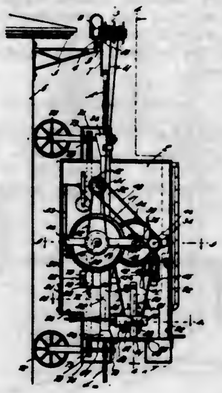
A receptacle comprising the larger part of a hollow sphere rotatively supported concentric with its axis, the remainder of the sphere being absent to form an open mouth, the lower part of the sphere being weighted to gravitationally present the open mouth normally uppermost and with its circle in a horizontal plane, a cover comprising a segment of a hollow sphere whose interior radius is slightly in excess of that of the exterior of the first-named hollow sphere, the edge of the cover being in a horizontal plane and lower than the normal plane of the said mouth and a standard rigidly supporting the cover and serving as the rotative support for the first-named hollow sphere, whereby the edges of the cover coming down and about the edges of the receptacle, serve as a seal to prevent evaporation from the receptacle.

1,348,135. SUN AND RAIN SHIELD FOR AUTOMOBILES. WILLIAM H. DAMON, Los Angeles, Calif. Filed Dec. 20, 1918. Serial No. 267,706. 2 Claims. (Cl. 296—96.)



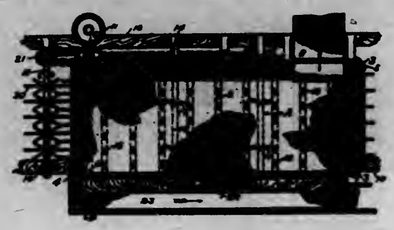
2. An adjustable sun and rain shield for automobiles comprising a suitable board, and adjustable clamping hinges adapted for connecting the board to an automobile top, so that the board may be swung downwardly to bring its rear upper edge into engagement with the lower face of the top and form a close joint, and so that the board may be swung upwardly over the top out of use; said hinges comprising attaching plates adapted to be secured against the front face of an automobile top, bearings extending straight forwardly from the attaching plates in line with the center of the edge of the top and having horizontal screw-threaded bores and corrugated vertical faces around the bores, second attaching plates secured to the board, bearings extending upwardly and backwardly from the second attaching plates and having horisontal openings to match the screw-threaded bores and second corrugated faces to match the first corrugated faces, and the horizontal openings being far enough from the second attaching plates to allow the board to swing downwardly with its rear edge engaging the lower face of the top, and clamping screws inserted loosely through the openings into the screw-threaded bores so that the board will swing downwardly for use and upwardly over the automobile top out of use and may be clamped in an adjusted position.

1,348,136. SHOE. ERNEST W. DUNBAR, Hudson, Mass., assignor to Apsley Rubber Company, Hudson, Mass., a Corporation of Massachusetts. Filed Sept. 25, 1919. Serial No. 326,323. 5 Claims. (Cl. 36—16.)



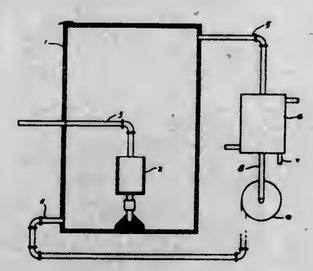
1. A shoe having a canvas upper, an innersole, an outer sole and a welt, the canvas upper having its lower edge portion extended outward over a projecting portion of the inner sole, the welt overlying the lateral extension of the upper, said welt, upper and inner sole being secured together by stitches, and an outer sole secured to the inner sole and projecting laterally beyond the edge of the inner sole, said welt consisting of an inner and outer layer of rubber and an intermediate core of fabric, said core extending to the outer edge of the welt.

1,348,137. VEHICLE-WHEEL RIM. WILLIAM GRIESCHEIT, Detroit, Mich. Filed Sept. 16, 1918. Serial No. 254,196. 3 Claims. (Cl. 152—21.)



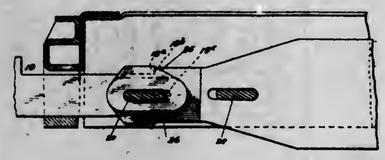
1. The combination with a rim proper, of a member circumferentially extending at one side of the rim proper and forming a detachable portion of the rim, the extremities of said member having a dove-tailed engagement with the rim proper, members carried by the rim proper adjacent the extremities of the detachable member engaging apertures respectively formed in said extremities, and members intermediately carried by the rim proper engaging circumferentially slotted apertures in the detachable member whereby said member is permitted a circumferential play to allow engagement of the end members subsequent to the engagement of the intermediate members.

1,348,138. CLIMBING-ELEVATOR DEVICE. JOHN HUNT, Dumont, Colo. Filed June 12, 1919. Serial No. 303,595. 20 Claims. (Cl. 187—1.)



1. In a machine of the class described, an elevated horisontal track and a carriage thereon, a vertical track depending from said carriage, a car movable along said vertical track, means carried by said car for propelling it along said vertical track, and means operable from said car for propelling said carriage along said horizontal track.

1,348,139. STEM-PICKER. EMIL CLEMENS HORST, San Francisco, Calif. Filed Jan. 28, 1920. Serial No. 354,725. 10 Claims. (Cl. 130—30.)

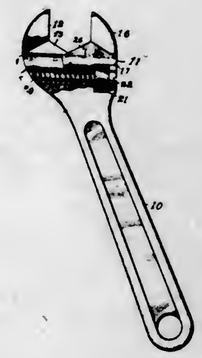


2. A stem picking machine comprising a comparatively long endless draper belt, said belt being laterally inclined with relation to its path of travel, means for delivering the material to be separated to one end of the belt, and means on the belt for obstructing the passage of stems.

1,348,140. REMOVING FUMES FROM MATERIALS. KENNETH B. HOWELL, Millburn, N. J., assignor to the Barrett Company, a Corporation of New Jersey. Filed Dec. 23, 1918. Serial No. 268,095. 14 Claims. (Cl. 83—91.)

1. The herein described process which comprises comminuting hot material and circulating a cooling medium around said material which contains constituents that are volatile at the temperature at which said material is being comminuted.

1,348,141. DRAFT-RIGGING ATTACHMENT. GEORGE C. MURRAY, Chicago, Ill., assignor to Keyoke Railway Equipment Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 3, 1915. Serial No. 64,872. 9 Claims. (Cl. 213—42.)

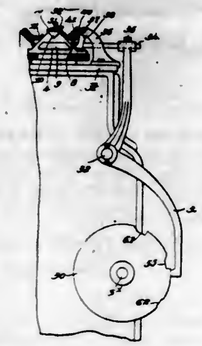


1. In combination, means to transmit stresses to a draft rigging or the like comprising yoke-acting mechanism, an apertured coupler butt, a draft-transmitting key extending therethrough, and means coacting with said coupler butt and key to transfer draft stresses from the former to the latter.

1,348,142. DRAW-BOARD FASTENER. AUGUST JABCHE, Grand Rapids, Mich. Filed Oct. 16, 1919. Serial No. 330,958. 3 Claims. (Cl. 57—18.)

1. A fastener, comprising a relatively wide head, a pair of integral webs on the under face of the head spaced apart and from the forward edge of the head, whereby a projecting lip is provided, and prongs integral with the webs and projecting downwardly from the forward ends of the webs.

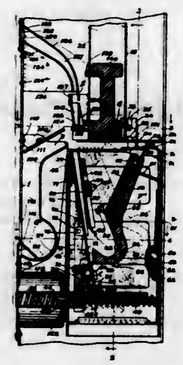
1,348,143. WRENCH. CLAYTON M. JONES, Jamestown, N. Y. Filed Mar. 8, 1920. Serial No. 364,166. 2 Claims. (Cl. 81—165.)



2. In a wrench, a head having a fixed jaw and having a double barreled opening the barrels of which are superposed and connected by a slot, an adjustable jaw having an extension slidable and conformably fitted in the upper of the barrels and in the slot and having rack teeth on its lower edge which extend downwardly into the top of the lower barrel, a screw fitting in the lower barrel so as to be guided thereby and in mesh with the rack teeth, and a nut attached to the screw and received in a transverse slot formed in the head, the nut having a bore of a diameter substantially equal to that of the screw, said lower barrel being formed so that its circular wall engages and guides the screw throughout substantially the length of the latter the screw being of equal diameter throughout and the lower barrel also being of equal diameter throughout.

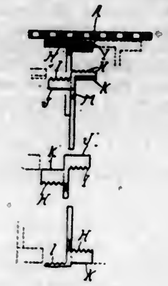
1,348,144. STARTING SELVAGE AND TUCKING DEVICE FOR KNITTING-MACHINES. ROBERT W. SCOTT, Boston, Mass., assignor, by mesne assignments, to Scott & Williams, Incorporated, a Corporation of Massachusetts. Filed July 24, 1914. Serial No. 852,897. 25 Claims. (Cl. 66—21.)

6. In a knitting machine, needles and means for forming a beginning selvage comprising means to lay yarn in the hooks of all the needles, and means for operating said needles in the absence of new yarn selectively to cast off said yarn from recurrent needles only distributed among the remainder, prior to normal knitting at all of said needles.



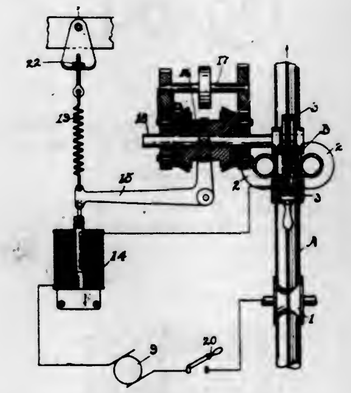
20. In a knitting machine, needles and a needle cam group comprising a stitch cam having an upper advancing surface and a lower retracting surface, beneath which is a normally free groove for needle butts, in combination

with means for moving said cam through the width of said groove at predetermined times, to lower its advancing surface for a special movement of the needles.



REISSUES.

14,925. VENDING-MACHINE. ALBERT D. GROVER, New York, N. Y., and EARL E. BARBER, Boston, Mass., assignors, by mesne assignments, to Autosales Corporation, a Corporation of New York. Filed Dec. 23, 1919. Serial No. 347,017. Original No. 1,260,372, dated Mar. 26, 1918, Serial No. 711,797, filed July 27, 1912. 43 Claims. (Cl. 194—75.)



1. In a coin-operated vending machine, the combination with a movable coin carrier having a rigid extension adapted to sustain the coin in operative position on the carrier, of a movable member arranged to be engaged by the sustained coin and actuated thereby when said coin carrier is operated, said coin-carrier and said member being adapted to retain the coin in connecting position during their complete forward movement, and independent means for discharging the coin from said carrier during the return movement thereof.

14,926. ROTARY HAMMER. HAROLD M. PLAISTED, St. Louis, Mo., assignor of forty-nine one-hundredths to Williams Patent Crusher & Pulverizer Co., St. Louis, Mo., a Corporation of Missouri. Filed Dec. 13, 1919. Serial No. 344,710. Original No. 1,301,316, dated Apr. 22, 1919, Serial No. 240,393, filed June 17, 1918. 9 Claims. (Cl. 88—11.)

1. A rotary hammer comprising a flat bar shank having two holes at one end for pivotal mounting, said holes being located on opposite sides of a central longitudinal line, and a T-head on said shank having four operative edges extending transversely in opposite directions from the faces of said shank, each pair of said edges being substantially equidistant from the center of the respective pivot holes, measured diagonally across the central longitudinal line.

14,927. APPARATUS FOR ELECTRIC WELDING. FRANK L. SESSIONS, Lakewood, Ohio, assignor, by mesne assignments, to The Standard Parts Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 5, 1919. Serial No. 295,010. Original No. 1,287,774, dated Dec. 17, 1918, Serial No. 779,674, filed July 18, 1913. Renewed Apr. 26, 1918, Serial No. 231,025. 6 Claims. (Cl. 219—6.)

1. In apparatus for electrically welding tubing, the combination of pressure rolls adapted to maintain the edges of a preliminarily formed tube in substantial contact; means adapted to feed a metallic electrode transversely of such tube toward such edges; means adapted to feed such tube longitudinally so as to move such edges progressively past the end of said electrode; circuit connections for passing a fusing electric current through said

electrode to both such edges; a suitable driver; a clutch for operatively connecting said electrode feeding means with said driver; and electro-magnetic means connected in such circuit and adapted to operate said clutch.

14,928. LOCK-NUT. FREDERICK C. WARNE, Mansfield, Ohio. Filed Mar. 15, 1920. Serial No. 366,070. Original No. 1,272,584, dated July 16, 1918, Serial No. 144,513, filed Jan. 25, 1917. 2 Claims. (Cl. 151—5.)

1. A nut and bolt lock, comprising a bolt having a threaded portion intersected by a longitudinally extending wedge shaped channel, and a nut having an axial cylindrical section having a threaded bore and provided on its margin with a plurality of circularly arranged longitudinally extending spaced fingers surrounding and extending parallel with the threaded portion of said bolt and having

outwardly inclined sides adapted to be driven into said wedge shaped channel to wedge within the latter in preventing relative movement between the bolt and nut.

TRADE-MARKS

OFFICIAL GAZETTE, JULY 27, 1920.

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 107,478. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) THE PASCAL PAINT LABORATORIES CO., Cleveland, Ohio. Filed Nov. 19, 1917.

LEFTY PAL

The trade-mark comprising the words "Lefty Pal."

Particular description of goods.—Ready-Mixed Paints, Metal-Primers; Wood-Primers; Rubbing-Fillers; Sanding-Surfacers, Such as are Used for Undercoating Metal Bodies of Automobiles, Railway-Cars, &c.; Rust-Proof Paints; Non-Corrosive Paints, and Air-Drying and Baking Enamels for General Use.

Claims use since Nov. 16, 1917.

Ser. No. 109,377. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) THE WAGNER MANUFACTURING COMPANY, Sidney, Ohio. Filed Mar. 4, 1918.

KRUSTY KORN KOBS

Particular description of goods.—A Metal Baking-Pan for Corn Bread and the Like.

Claims use since Feb. 15, 1918.

Ser. No. 110,129. (CLASS 48. MALT BEVERAGES, EXTRACTS, AND LIQUORS.) THE WILLIAM PETER BREWING CO., Union, N. J. Filed Apr. 11, 1918.

Weneeda

Particular description of goods.—A Non-Intoxicating Beverage Consisting of Malt, Hops, Water, Yeast, and Containing Less Than One-Half of One Per Cent. of Alcohol, by Volume.

Claims use since Dec. 5, 1917.

Ser. No. 110,206. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) FLAKETOWN GRAPHITE CO., Mountain Creek, Ala. Filed Apr. 15, 1918.

FLAKETOWN

Particular description of goods.—Graphite.

Claims use since December, 1905.

Ser. No. 111,284. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) VICTOR VIVAUDOU, New York, N. Y. Filed May 31, 1918.

Sokool

Particular description of goods.—Talc.

Claims use since May 18, 1918.

Ser. No. 111,730. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ALFRED J. KRANK, St. Paul, Minn. Filed June 18, 1918.

KRANK'S LEMON CLEANSING CREAM

No claim being made to the words "Cleaning Cream" apart from the mark as shown.

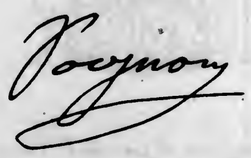
Particular description of goods.—A Skin-Cleansing Tonic and Massage-Cream.

Claims use since Jan. 18, 1918.

Ser. No. 113,129. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) MOUNT VERNON COMPANY SILVERSMITHS INCORPORATED, Mount Vernon, N. Y. Filed Sept. 11, 1918.

Particular description of goods.—Surgical Instruments—Namely, Retractors, Cannulas, Bone-Plates, Catheters, Tubes, Needles, Urethral Applicators, Nozzles, Proctoscopes, Probes, Saw-Handles, and Spatulas.
Claims use since Aug. 31, 1918.

Ser. No. 113,943. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE GORTON CHOCOLATE CO., INC., Corning, N. Y. Filed Oct. 30, 1918.



Particular description of goods.—Candy.
Claims use since June, 1914.

Ser. No. 114,829. (CLASS 15. OILS AND GREASES.) OZMO OIL REFINING CO., San Francisco, Calif. Filed Dec. 26, 1918.

DIABLO

Particular description of goods.—Petroleum Products—Namely, Gasolene, Benzin, Distillate, Kerosene, Lubricating-Oils, Lubricating-Greases, Metal-Cutting Compounds, Launching Compounds, and Mineral Waxes.
Claims use since Oct. 16, 1918.

Ser. No. 115,329. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) SOCIETE H. TRENTELIVRES & CIE., Paris, France. Filed Jan. 20, 1919.

Particular description of goods.—Spark-Plugs.
Claims use since Nov. 6, 1918.

Ser. No. 115,803. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DIMOULIS AND SPILIOTAKARAS, Aberdeen, S. D. Filed Feb. 12, 1919.

No claim being made to the use of the words "D & S, Manufacturers, Aberdeen, S. Dak." and "Trade Mark" apart from the trade-mark as shown in said drawing.
Particular description of goods.—A Medicine for the Treatment of Rheumatism.
Claims use since Jan. 1, 1919.

Ser. No. 115,848. (CLASS 39. CLOTHING.) WALTER K. MONTAGUE, San Francisco, Calif. Filed Feb. 13, 1919.

PLASUTE

Particular description of goods.—Children's Overalls.
Claims use since Jan. 16, 1919.

Ser. No. 116,917. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) CALIFORNIA SOAP COMPANY, INC., Los Angeles, Calif. Filed Mar. 26, 1919.

Consisting of diamond-shaped black ground with the arbitrary words "Wash-E-Z-Y" thereon in large letters.
Particular description of goods.—Soaps.
Claims use since Jan. 1, 1912.

Ser. No. 117,476. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) BENJ. H. CHANDLER, Cleveland, Ohio. Filed Apr. 15, 1919.

CLAR-ITE

Particular description of goods.—A Compound for Cleaning the Following Surfaces—Namely, Floors, Woodwork, Furniture, Painted Walls, Marble, Tiling, Rubber, Metals, and Kindred Materials.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

GRUS, JR., *v.* EYNON.

Decided March 17, 1919.

1. PATENTS—INTERFERENCE—ABANDONED EXPERIMENT.

A party must be judged by his conduct rather than by what he says afterward were his intentions. Where G. alleges that he constructed a device in March, 1913, and tested it shortly thereafter by placing it in a car for a week, after which it was removed and taken to a party for the purpose of having dies made, where it remained until 1917, and that this test was so satisfactory that he did not think it necessary to test two other devices made in August, 1914, and August, 1915, respectively, but he further testifies that three other devices were made in 1916, and that several thousand devices constructed in accordance with these models were made and sold, but no application for the invention was filed until June, 1916, although three other applications were filed which were not within the issue, *Held* that the evidence indicates that what was done in 1913 amounted only to an abandoned experiment.

2. SAME—SAME—EVIDENCE.

Where three patents were granted to a party whose name is the same as that of an applicant involved in interference, and the name of the attorneys in each is the same, and the applicant in the interference testifies that one of these patents was taken out by him, and the description thereof contains a reference to another of these patents, *Held* that it may properly be concluded that the applications were all filed by the same person, although the patents were not introduced into evidence.

(Affirmed by Court of Appeals, District of Columbia, 276 O. G., 780.)

APPEAL from Examiners-in-Chief.

SPRING-OILER.

Messrs. Brown, Nissen, & Sprinkle and *Messrs. Brown & Nissen* for Grus, Jr.

Messrs. Hull, Smith, Brock & West for Eynon.

WHITEHEAD, *First Assistant Commissioner:*

The junior party, Grus, appeals from the decision of the Examiners-in-Chief affirming the decision of the Examiner of Interferences awarding priority of invention to Eynon.

The invention in issue is a lubricator intended to lubricate the springs of automobiles.

Counts 1, 3, and 4 of the issue read as follows:

1. In a leaf spring lubricator, the combination with a casing having a recess in the bottom thereof and forming a continuous wall around the edge of the bottom of the casing, a pad of absorbent material fitting in the casing, and means to press the casing against the edges of the spring leaves thereby compressing the pad about its edge.

3. In a spring-oiler, a cup element consisting of a main receptacle provided with a web formed with an oil cup and supporting means.

4. In combination with a leaf spring, a lubricating device therefor comprising a pair of metal plates extending across opposite edges of the leaves and provided with oil pockets and flat bearing faces at opposite sides of the pockets, lubricating pads between said bearing faces and adjacent edges of the spring leaves and extending across the open sides of the pockets, and means for drawing the plates toward each other to clamp the device to the spring.

Eynon took no testimony and relies upon the filing of his application on Setpember 17, 1915, as a constructive reduction to practice of the invention.

Grus alleges a conception of the invention on February 19, 1913, and the making and successful operation of the device on or about March 1, 1913.

In his testimony Grus states that he conceived the invention on February 19, 1913, on which date he says he was working on a car in his garage in the evening and explained to Jorgensen and A. J. Kasper, Jr., that he was going to make a device of this kind. He states that he undertook to hollow out a steel plate but was unable to do so; that he went to a machinist who told him that the steel plate was too heavy but that the device could be made of brass, and that this was subsequently done. Jorgensen and Kasper testify that they visited Grus at his garage, and undertake to fix the date by reference to some work that Jorgensen had had done on his car, the bill for which is in evidence.

Grus has introduced in evidence, as Exhibit No. 1, a device having a flat steel plate which he says he attempted to hollow out. A device made of brass, but which Grus says was not of the right size, is in evidence as Exhibit No. 2. The device which is in evidence as Exhibit No. 3 Grus states was made a little later and was put upon a car and found to be satisfactory. He fixes the date of this test as about March 1, 1913. He testifies that he made two other devices, Exhibits Nos. 4 and 5, in August, 1914, and August, 1915, respectively. They differ from Exhibit No. 3 in that they have two plates which are held against the spring by bolts passing therethrough, one above and one below the spring, instead of a single plate held to the spring by a U-bolt. Grus testifies (Q. 45 and Q. 98) that he did not test either of these devices.

He also testifies that another device which is in evidence as Exhibit No. 6 was made in January, 1916, and that subsequently two others were made that are in evidence as Exhibits Nos. 7 and 8; that two or three thousand devices like Exhibit No. 7

were sold, and that a large number of devices like Exhibit No. 8 were sold. This latter is called a final form of the device. Exhibits Nos. 6 and 7 are heavy castings, whereas Exhibits Nos. 3, 4, 5, and 8 are made of stamped sheet metal.

It is noted that according to Grus's testimony Exhibits Nos. 1, 2, 3, and 4 were made prior to Eynon's filing date, while the other exhibits were made thereafter. It is Exhibit No. 3 that is particularly relied upon by the appellant as being a reduction to practice.

Both of the lower tribunals have held that in view of Grus's conduct with reference to these devices, particularly his not filing an application for patent on this device until June, 1916, the alleged reduction to practice was nothing more than an experiment and that he has shown no diligence in reducing the invention to practice.

According to Grus's testimony (Q. 64) after the device Exhibit No. 3 was made he put a little tin plate with slots in it in the recess in the brass plate to prevent the felt pad from being forced into this recess so that he could get oil therein more readily and that when this was done the device worked satisfactorily. He testifies (X-Q. 32) that this third device was kept on the car about a week and afterward taken to one August Wiegand to have dies made, in whose possession it remained until about three weeks before the testimony was taken.

In answer to question 75 Grus makes a long statement as to his financial condition and as to his attempts to raise the money to have dies made for the manufacturing of this device and his inability to raise the money or organize a company until the early part of 1916.

The records of this office, however, show that Grus filed on August 8, 1913, which is subsequent to the time that Exhibit No. 3 is said to have been made, an application for patent on a leaf-spring lubricator which is not within the issue. In that device the plate has no recess but has an oil-cup and an opening in the center of a flat plate, an annular leather washer being put between the plate and the spring, thereby leaving a space for the oil between the plate and the spring. This patent is referred to by Grus in answer to question 121. The records also show that Grus filed applications for patents on three other forms of the device—on August 19, 1914, May 29, 1915, and January 14, 1916, respectively. These devices are not within the issue. All three of these applications have matured into patent. Objection was raised to the consideration of these patents on the ground that they were not introduced in evidence and proper notice was not given under the rule, it being argued that there is nothing to show that the William Grus, Jr., on whose applications the patents were granted, is the same William Grus, Jr., whose application is involved in this interference. The name is the same, the attorneys are the same, and Patent No. 1,188,442, which was granted on the application filed May 29, 1915, specifically refers to No. 1,121,354, which is referred to by Grus in his testimony. They can therefore properly be considered.

Grus's statement that he was satisfied with the device of Exhibit No. 3 and that he was so well satisfied with the devices of Exhibits Nos. 4 and 5 that he did not think it necessary to test them is absolutely inconsistent with his action in filing, before he filed the present application, three applications for patent on devices for this general purpose, but which do not embody the invention in issue. It may be true, as alleged by Grus, that it would have cost $600 to have dies made to manufacture a device like Exhibit No. 3, though the record does not show that he got estimates but from the one machinist, but no satisfactory excuse is given why an application for patent was not filed on this device, nor does it appear why a device embodying the issue could not have been cast, as, it appears from Grus's own testimony, was done with reference to the other devices.

An applicant must be judged by his conduct rather than by what he says afterward were his intentions. His conduct in this case is so inconsistent with his claim that he was satisfied with Exhibit No. 3 that the holding is justified that the making of this device was a mere experiment and not a reduction to practice. Certainly Grus has not shown that he was diligent in reducing the invention in issue to practice at the time Eynon filed his application in September, 1915, and subsequently thereto, nor in view of the fact of the filing of three other applications, one in 1913, one in 1914, and one in May, 1915, can it be held that there was any sufficient excuse for the lack of diligence.

While, as stated above, Exhibit No. 3 is especially relied upon as a reduction to practice of the invention in issue, it is to be noted that this device does not have two plates, as called for by counts 4 and 5. Exhibits 4 and 5 contain the two plates, but neither of them was tested, nor was any device of this construction tested before Eynon's filing date.

It is held that Grus has established nothing more than a conception of the invention in issue prior to Eynon's filing date, that he was lacking in diligence, and that priority was properly awarded to George A. Eynon, the senior party.

The decision of the Examiners-in-Chief is affirmed.

HALEY *v.* DU RELL.

Decided February 11, 1919.

1. PATENTS—INTERFERENCE—REDUCTION TO PRACTICE OF PROCESS—EXPERIMENTAL MODEL.

The rules governing the reduction to practice of a process are similar to those for the reduction to practice of an apparatus. The process should be performed in a way that leaves no doubt as to its commercial practical working. *Held*, therefore, that a process carried out with an experimental model was not a reduction to practice.

2. SAME—SAME—REDUCTION TO PRACTICE—ABANDONED EXPERIMENT.

In an interference relating to an oil flotation apparatus and process where a party made laboratory experiments in 1912 in which he employed a glass funnel, a wash-bottle from which to supply water, and a spoon with which to feed ore, by which he could treat about four hundred pounds of ore per day, but did little or nothing thereafter to commercialize his machine and never made any salable commercial article, did not file his application until 1915, but took out another patent in October, 1915, for a different device, *Held* that what was done in 1912 must be considered as merely experimental.

Affirmed by the Court of Appeals, District of Columbia, 276 O. G., 778.)

APPEAL from Examiners-in-Chief.

CONCENTRATOR.

Messrs. Pennie, Davis, Marvin & Edmonds for Haley.

Mr. James T. Barkelew and *Mr. Edgar J. Clarkson* for Du Rell.

NEWTON, *Commissioner:*

This is an appeal from the decision of the Examiners-in-Chief affirming the action of the Examiner of Interferences awarding priority to Haley, the junior party, on twelve issues, of which counts 1 and 2 are examples:

1. An oil flotation apparatus comprising a flotation box having therein a receptacle holding a relatively small body of liquid and arranged to overflow into said box, and an injector arranged above the liquid level in said box to discharge a jet of pulp mixed with oil downwardly into the liquid in said receptacle and to aerate said pulp and form a froth therefrom.

2. The herein described continuous process of concentrating ores, including continuously fluidizing the ore containing mineral to be separated, continuously injecting a liquid jet through an atmosphere of gas directly and forcibly into a body of the fluidized ore to form a froth and continuously withdrawing the fluidizing ore from the body and separating the froth from the remaining material.

Du Rell has two applications filed February 12, 1915, and March 22, 1916. Haley filed June 4, 1915.

For reasons fully set forth by the lower tribunals and which have not been seriously questioned it is held that Haley reduced to practice the last of July, 1914.

Instead of taking testimony the parties have stipulated that affidavits subject to cross-examination of the affiants where desired be submitted.

Du Rell alleges conception, including the successful operation of a machine, in August, 1912. Du Rell sets up another reduction to practice in the fall of 1912.

This case largely turns on whether Du Rell's 1912 apparatus constituted a reduction to practice, since Haley did not enter the field until the summer of 1914.

Du Rell's apparatus, so far as can be gathered from its description, was built in the summer of 1912 of parts found in his laboratory. For example, the flotation-box was a glass funnel, the supply of water, etc., came from a wash-bottle, the ore was fed by means of a spoon, and the froth was caught in a beaker. The next apparatus seems to have been about the same so far as bears on the question whether or not this apparatus was a model or experiment or was what is technically known as a reduction to practice. It seems that about four hundred pounds of ore per day could be treated by this apparatus. This alone indicates the experimental nature of Du Rell's apparatus.

Du Rell contends that the second machine specifically demonstrated to his satisfaction that it would be a success and only needed to be enlarged; but after the fall of 1912 Du Rell appears to have done little or nothing to commercialize his machine and, indeed, has never made any salable commercial article, and his Patent No. 1,157,092, October 19, 1915, applied for after he had begun his work on the present invention, discloses quite a different invention from the one in controversy, indicating he was not satisfied with the present invention.

It is difficult sometimes to determine whether an apparatus is a mere experimental model or a reduction to practice. One of these things may gradually shade into the other. In *Hunter* v. *Stikeman* (85 O. G., 610; 13 App. D. C., 214) the Court of Appeals of the District of Columbia held on the matter of difference between a model and a reduction to practice:

So strict is the rule upon this subject that it has been held that complete invention must amount to demonstration. It must be shown to have passed the region of experiment—of possible or probable failure—and that it has arrived at certainty by being embodied in the form intended capable of producing the desired results. A model alone, no matter how complete in detail of construction, does not come within the operation of such a rule. (*Stephenson* v. *Goodell*, C. D., 1876, 133; 9 O. G., 1195.)

In *Manny* v. *Easley* v. *Greenwood*, (51 O. G., 1617,) where the point involved was whether a crude wooden lemon-squeezer was a reduction to practice, while the testimony showed that it had actually been used to squeeze lemons, the Commissioner held:

Reduction to practice is reduction to a form adapted to practical use. (*Coffin* v. *Ogden*, 18 Wall., 120; *Allis* v. *Buckstaff et al.*, C. D., 1882, 480; 13 Fed. Rep., 879; *Washburn & Moen Manuf'g Co.* v. *Haish*, C. D., 1880, 610; 4 Fed. Rep., 900.) Obviously the crude wooden model which Easley says he had to hold by the cone because he was afraid it would break from its base was not adapted to practical use. The utmost that can be said of it is that the use was experimental and could only establish a date of invention if it were followed up by such diligence as the law calls for to complete reduction to practice.

Du Rell's actions after his experiments also indicate that he attached little importance to his invention. His long delay before filing his application or taking any steps toward filing an application, his patenting another form of the device, and his failure to put it into commercial use all speak against this 1912 device being a reduction to practice as distinguished from an experimental model.

The attempt by Haley to show that Du Rell saw a publication of his invention in the "*Mining and Scientific Press*" of November 14, 1914, has failed. Du Rell himself denied ever having seen that publication, and hence was not stirred into action thereby.

At the hearing before me Du Rell emphasized the point that even though his 1912 *apparatus* may be classed as an experimental model, his process which he carried out with that apparatus complied with the tests of "reduction to practice" of the process *per se*, and hence he should be awarded the process claims.

The process claims and the apparatus claims in this case mean approximately the same thing, and it is highly technical to try to separate them on the

ground urged by Du Rell. While in a sense it is true that a process is independent of the particular apparatus used in carrying it out, indeed, that a process should ordinarily be capable of operation with widely-differing specific apparatuses, the rules for reduction to practice of a process are, as far as the decisions go, similar to those for the reduction to practice of an apparatus. The process should be performed in a way that leaves no doubt as to its commercial practical working, and it cannot be held that Du Rell has shown such a reduction to practice of his process, and the process claims should therefore go with the apparatus claims so far as this point is concerned.

I find no error in the decisions of the lower tribunals either as to fact or law, and the decision of the Examiners-in-Chief awarding priority to Haley is affirmed.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

DU RELL *v.* HALEY.

Decided June 2, 1920.

PATENTS—INTERFERENCE—DILIGENCE LACKING.

Evidence considered and *Held* that Du Rell's early experiments did not amount to a reduction to practice and that as he did nothing thereafter for almost two years, while in the meantime Haley reduced the invention to practice, Haley is entitled to an award of priority.

(Decision of the Commissioner, 276 O. G., 776, affirmed.)

Mr. T. K. Bryant for the appellant.

Mr. Dean S. Edmonds and *Mr. J. B. Hull* for the appellee.

ROBB, *J.:*

Appeal from concurrent decisions of the Patent Office tribunals in an interference proceeding in which priority was awarded the junior party.

The invention involves a process and apparatus for concentration of ores. The claims are twelve in number but it is unnecessary to repeat them here. Each of the Patent Office tribunals has held that appellant's early efforts did not amount to reduction to practice and that, as he did nothing thereafter for almost two years and appellee entered the field meanwhile, he was lacking in diligence. Each of those tribunals has carefully and satisfactorily discussed the evidence in behalf of appellant, and for the reasons stated by them we affirm the decision from which this appeal was taken.

Affirmed.

Court of Appeals of the District of Columbia.

GAMMETER *v.* BACKDAHL.

Decided June 2, 1920.

PATENTS—PRIORITY—DILIGENCE.

In considering the bearing of experiments made to perfect an invention on the question of diligence the test is not whether such experiments led to anything as far as benefiting the public is concerned, but whether such tests were so unnecessary as to constitute evidence of bad faith. An inventor is to be commended rather than condemned for taking reasonable time to perfect his invention. (*Griffin* v. *Swenson*, 15 App. D. C., 135, 142; 89 O. G., 919.)

Mr. H. A. Dodge and *Mr. R. M. Pierson* for the appellant.

Mr. W. Lee Helms and *Mr. Chas. S. Jones* for the appellee.

ROBB, *J.:*

Appeal from a decision of an Assistant Commissioner of Patents in an interference proceeding awarding priority to the senior party Backdahl. The invention relates to mandrels or cores for the formation and curing of pneumatic tires. Counts 1, 3 and 6 are sufficiently illustrative of the six counts of the issue and are here reproduced:

1. A fluid tight, hollow, stretchable, metallic mandrel.
3. A tire-making mandrel comprising a fluid-tight, hollow, lead annulus provided with an inlet for introducing an expanding fluid.
6. A tire-making mandrel comprising an inner rigid metallic ring adapted to fit between the halves of a tire mold, and an outer, annular, hollow, lead mandrel-body thereon, provided with a fluid inlet pipe extending through said ring.

Backdahl is restricted to his filing date of December 14, 1915, for conception, disclosure and constructive reduction to practice.

Each of the Patent Office tribunals has found, and the evidence fully supports the finding, that Gammeter conceived and disclosed the invention September 7, 1915. The evidence clearly shows that from that time until the early part of June, 1916, he was endeavoring to evolve a fluid-tight and expansible lead core adapted to produce a cord tire as well as a fabric tire. A core that would produce either would be within the issue. The application drawings were commenced the latter part of May and completed late in June, when they were turned over to a patent attorney, who was very busy at the time and later took a vacation extending over a month. There was further activity on the part of Gammeter in August of 1916 and the application was filed on November 8th, following.

The Examiner of Interferences and the Board of Examiners-in-Chief held that Gammeter was diligent at the time Backdahl entered the field and reasonably diligent from that time until the filing of his application. The Assistant Commissioner disagreed with this finding and therefore reversed the decisions of the lower tribunals.

Where, as here, it clearly appears that the party first to conceive the invention was in good faith engaged in perfecting it at the time his adversary entered the field, that party should not be deprived of the fruits of his discovery because his efforts were not as successful as he hoped they would be. The Assistant Commissioner reached the conclusion that Gammeter's further—

experiments lead to nothing so far as benefiting the public goes,

but that is not the test. The question is whether further tests were so unnecessary as to constitute evidence of negligence or bad faith. Many times we have stated that an inventor is to be commended

rather than condemned for taking reasonable time to perfect his invention,

to prevent the Patent Office from being overloaded with applications for patents for crude and incomplete devices. (*Griffin* v. *Swenson*, 15 App., D. C., 135, 142.)

For the reasons stated by the Examiner of Interferences and the Board of Examiners-in-Chief, we are clearly of the view that Gammeter was not lacking in diligence. We are satisfied from the evidence that from the date of disclosure to the time his application was filed he was proceeding with reasonable diligence to perfect and patent his invention. As stated in *Woods* v. *Poor*, (29 App. D. C., 397,) there is no arbitrary rule or standard by which diligence may be measured, and each case must be considered and decided in the light of surrounding circumstances. Being fully convinced of Gammeter's good faith, we reverse the decision of the Assistant Commissioner and award priority to him.

Reversed.

The decision of the Assistant Commissioner reads as follows:

CLAY, *Assistant Commissioner:*

Backdahl appeals from the affirmance by the Examiners-in-Chief of an award of priority to the junior party Gammeter, on an invention broadly defined as follows:

"1. A fluid-tight, hollow, stretchable, metallic mandrel.

"3. A tire-making mandrel comprising a fluid-tight, hollow, lead annulus provided with an inlet for introducing an expanded fluid.

"5. A tire-making mandrel comprising a rigid metallic tongue-ring divided circumferentially into segments, and an expansible, hollow, lead mandrel-body seated thereon."

Gammeter filed application nearly a year after Backdahl, but is shown to have had a conception of the invention prior to Backdahl's filing date, whereas Backdahl is confined to his filing date, having made his invention abroad. There seems to be no question that Gammeter disclosed his invention in September, 1915, over two months before Backdahl's date of constructive reduction to practice; but Backdahl insists that Gammeter was not diligent in perfecting his invention. Careful attention to the nature of the invention is necessary to determine this matter.

The invention Gammeter discloses is simply a lead pipe used as an expansible mandrel in a mold for vulcanizing tire casings, that is, "a core or mandrel of sufficient rigidity to enable the article to be formed thereover, but also capable of being stretched by fluid pressure to expand the formed article and press it against a mold * * *." He shows and describes a coil of ordinary lead pipe with a turn sawed off, its ends soldered together and an inlet tube soldered into it. It is set in the trough on the outside of the sectional tongue ring held by clamps and assembled between the halves of a mold. On being expanded in the mold to give it a smooth surface and the proper size, it is ready for use to build up a tire casing thereon in the usual way, after which the tire and lead mandrel and supporting ring are placed in a vulcanizing mold and the casing stretched and properly held for the purpose of vulcanizing. Afterward the lead of the pipe is remelted and used over again. Nothing is said about the thickness of the pipe or any particular form of it, and Gammeter claimed in the broadest terms, a hollow lead mandrel. There was also claimed the method of making the lead mandrel by sawing and joining rings from a coil of pipe as above described, but these latter claims were dropped. It will be noticed that the invention has nothing to do with the manufacture of lead piping, nor anything to do with any particular form of lead pipe or mandrel.

The process of invention probably always includes the steps of conception of a function, conception of a general way to accomplish the function, designing and adapting means to accomplish the function; and finally testing these means to prove both that the function may be attained and that the means chosen are capable of attaining it; in other words, that the thing will work. This is one continuous mental process from conception to testing, and with rare exceptions an invention is not complete until the thing is proven by test, though this last step the law presumes to be accomplished by the filing of an allowable application for patent. After Gammeter's conception of a hollow expansible metal mandrel, rigid enough to build on, and made of lead so that it will be both rigid and expansible, and after he had conceived a way of making the lead tube, he still had to prove that it would work as a mandrel for curing tires. Instead of making a tube and trying it out, as the evidence shows he could easily have done, without any more ado, he went to work on quite a different problem—namely, to devise a new use for such a mandrel. That is, he was going to make a form of mandrel which was adapted to a peculiar form of support in order that it might be used in making a peculiar kind of tire. As to the hollow lead mandrel for tire molds generally, he did nothing. He experimented for over a year, but when all his experimenting was done he was exactly where he started, so far as concerns the invention of a hollow lead mandrel for tire molds, and he had not yet tried to prove that this thing would work. He filed his application finally, still relying upon the theoretical working and upon the constructive reduction to practice. That is, from about the middle of September, 1915, until November 8, 1916, Gammeter was making unsuccessful attempts, first to cast a lead mandrel in a mold, and then to make one by squirting molten lead through a specially formed pipe, both of which attempts were for the purpose of providing a specially formed groove and thickened portion on the inside of the lead tube, as shown in Gammeter's sketch, Exhibit Z, and in the photograph, Exhibit K. The main part of the work was in designing and building the die shown in his Exhibit L. It is fair to notice that Gammeter was a busy man in a responsible position as an experimental engineer for a large company and that his attorney, who delayed filing his application over four months, was a busy attorney with many cases to attend to.

In Gammeter's brief it is said that "There is no evidence of any intention on the part of Gammeter to abandon the invention." Considering what the invention was I am not satisfied with this statement of fact; but however that may be, it is hardly a statement of the proper mental attitude toward the question of diligence. The burden was upon Gammeter, not merely to negative a charge of laches, but to positively show diligence. (*Watson* v. *Thomas*, 106 O. G., 1776; C. D., 1903, p. 370.) The burden was on him to connect his conception with his final reduction to practice by a course of activity which, as the court said in *Twentieth Century Machinery Co.* v. *Loew Mfg. Co.*, (243 Fed. Rep., 373, at page 384,) "must consist of a degree of effort that can fairly be characterized as 'substantially one continuous act'," and that act must be the act of inventing "a fluid-tight, hollow, stretchable, metallic mandrel"—not inventing a particular form of lead pipe from which a special mandrel may be constructed for a particular purpose. After December 14, 1915, when Backdahl reduced to practice, nothing Gammeter could do could make him the inventor. He must have been the inventor from a time running back of this and reaching forward until nearly a year later when he filed his own application. "Diligence is of the essence of a proper relation between the conception and the reduction to practice of an invention." As illustrating this fact it has frequently been held that business convenience and the working out of auxiliary devices to make the invention more commercial and efficient will not excuse the delay. (*Stapleton* v. *Kinney*, 96 O. G., 1432; C. D., 1901, 414.) Nor is delay excusable when caused by the inventor's building a plant and the machinery with which to make use of the invention, especially when his application was finally filed without making any test. (*Slick* v. *Hansen*, 181 O. G., 1076; 39 App. D. C., 131.) Again, "it has been repeatedly held that work upon one form of a device cannot be considered as diligence in the reduction to practice of another form." (*Taylor* v. *Gilman*, 158 O. G., 883.) As to the part of the delay due to the attorney, it is not to be excused merely because he was busy or on a vacation. (*Briggs* v. *Lillie* v. *Cooke* v. *Jones & Taylor*, 116 O. G., 871; 1905 C. D., 168.)

If there was something in Gammeter's disclosure by which the public could benefit from the experiments he made on the special form of mandrel for use with a cord tire, his case would have more equity. But as a matter of fact his disclosure is just what it would have been if he had filed his application in September, 1915. What he was experimenting with was a further improvement subsidiary to the invention in issue, and this improvement he neither at any time reduced to practice nor disclosed when he came finally after the experiments to file an application for patent. His experiments led to nothing so far as benefiting the public goes.

It is in evidence that Gammeter had every facility for making a test of his invention at the beginning. He could have obtained in commerce, ready made, a lead pipe exactly as disclosed in his application and he could have made a test of the workability of the invention within a few days. Also he could have filed his application promptly.

The form of the invention as disclosed by Backdahl seems to have been somewhat more highly developed. He proposed a mandrel partly of iron and partly of lead, the skin or "mantle" of lead, 19' in Fig. 5 being made of a complete flattened lead pipe, supported on an iron ring 1 and the convex half of it extended in the female mold 16. In the form of Fig. 4 the lead pipe is split and drawn over the iron mandrel and its edges clamped by rings 20; the fluid for expansion being introduced between the iron mandrel and the lead skin.

Under these circumstances, and especially considering that the public did not benefit from the experimenting done by Gammeter after his complete conception and disclosure in September, 1915, I must conclude that it was error, in view of the decisions of the court, to hold Gammeter has proven himself diligent as against Backdahl

who was the first to reduce to practice. In the case of *O'Connell* v. *Schmidt* (122 O. G., 2065; 27 App. D. C., 77,) the court was liberal on the question of diligence, not only because the delay was short and well excused, but because O'Connell had built a model; had done something tangible and beneficial, and had virtually proved his invention and put it in such condition that if the inventor had died, his invention would nevertheless have survived. The present is a very different case from that, and from the case of *Woods* v. *Poor*, (130 O. G., 1313; 29 App. D. C., 397.) In the case of *Courson* v. *O'Connor* (227 Fed. Rep., 890) there was only a delay of three months, and this, it will be noticed, was after an actual reduction to practice.

The decision of the Examiners-in-Chief is reversed, and priority awarded to the senior party, Backdahl.

Court of Appeals of the District of Columbia.

GRUS, JR., *v.* EYNON.

Decided June 2, 1920.

PATENTS—INTERFERENCE—PRIORITY.

Evidence considered and *Held* that priority of invention was properly awarded to Eynon.

(Decision of the Assistant Commissioner, 276 O. G., 775, affirmed.)

Mr. Frank T. Brown and *Mr. C. M. Nissen* for the appellant.

Mr. J. B. Hull for the appellee.

ROBB, *J.:*

Appeal from concurrent decisions of the Patent Office tribunals in an interference proceeding awarding priority to the senior party. The invention relates to automobile-leaf-spring lubricators. The issue is stated in five counts, of which the second will serve as an example:

2. In a leaf spring lubricator, a pad of absorbent material, a casing fitting over the absorbent material having a recess in its bottom and a perimetric wall, and means for pressing the casing against the edges of the leaves of a spring to compress the pad of its edges more than in the center.

The Patent Office tribunals have very carefully reviewed the evidence and found that appellant has not sustained the burden of proof. As we fully agree with the conclusion reached, we deem it unnecessary further to discuss the evidence, and accordingly affirm the decision.

Affirmed.

ADJUDICATED PATENTS.

(U. S. C. C. A. Cal.) The Logan patent, No. 836,592, for an apparatus for treating the butt ends of poles with a preservative, as limited by the prior art, *Held* not infringed. *Logan et al.* v. *Baxter et al.*, 264 Fed. Rep., 514.

Notice of Cancelation.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE.
Washington, D. C., July 19, 1920.

Alfred Victor Brokhahne, his assigns or legal representatives, take notice:

An application has been filed in this Office by Sigmund Isaacs, of New York, N. Y., to effect the cancelation of the trade-mark registration of Alfred Victor Brokhahne, of New York, N. Y., No. 12,417, dated July 21, 1885. The Office having been unable to secure service upon said Alfred Victor Brokhahne at the said address, notice is hereby given that unless said Alfred Victor Brokhahne, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancelation will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

R. F. WHITEHEAD,
First Assistant Commissioner.

Interference Notice.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 30, 1920.

Harris Wolf, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Wolfinger Knitting Mills, Walnut and Rose streets, Reading, Pa., for registration of a trade-mark and trade-mark registered March 10, 1891, No. 19,153, to Harris Wolf, Chicago, Ill., and a notice of such declaration sent by registered mail to said Harris Wolf at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Harris Wolf, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

R. F. WHITEHEAD,
First Assistant Commissioner.

SUBJECT-MATTER INDEX.

	Page.
Abandoned experiments, device made, tested, long delay in filing application, although applications filed for other devices, Grus, Jr., *v.* Eynon	775
Claims for indicator provided with graduation not aggregational when specifying such graduation, *ex parte* Duncan	207
Multiplicity of, defining simple invention, duty of applicant to point out distinctions, *ex parte* Duncan	207
Rejection of for duplication and indefiniteness, *ex parte* Duncan	207
**In re* Duncan	211
Commissioner of Patents, action not restricted to questions put in assignment of errors, may base opinion upon information otherwise obtained, *ex parte* Duncan	207
Construction may be made and sold after expiration of patent which it infringed, ᵇ Van Kannel Revolving Door Co. *v.* Winton Hotel Co	406
Construction of trade-mark statutes, section 5, Trade-Mark Act, 1905, **in re* United States Rubber Company	211
Diligence, test in considering experiments made not whether they benefit public, but whether made in good faith, *Gammeter *v.* Backdahl	778
Improvement adapted, change made only substitution of material, not invention, ᵈ Minneapolis Knitting Works *v.* Marshall Field & Co	598
Interference, name in three patents same as applicant's, attorneys same, applicant testifies one patent specifically refers to another taken out by him, considered as all filed by same person, although patents not introduced in evidence, Grus, Jr., *v.* Eynon	775
Invention, substitution of equivalents not invention, *ex parte* Teale	595
Monopoly cannot be prolonged by pioneer patentee subsequently patenting one feature of device, because of broad construction granted originally, ᵇ Van Kannel Revolving Door Co. *v.* Winton Hotel Co	406
Particular patents, Ovenshire, No. 800,237, for infant's band or shirt, void, ᵈ Minneapolis Knitting Works *v.* Marshall Field & Co	598
Van Kannel, Reissue No. 14,255, revolving door, certain claims invalid as anticipated by earlier patent to same inventor, ᵇ Van Kannel Revolving Door Co. *v.* Winton Hotel Co	406
Patentability, *ex parte* Teale	595
Must be more than an aggregation of features, **in re* Smithey	211
Priority of invention, award, *Brown *v.* McIntosh	405
*Du Rell *v.* Haley	778
*Gammeter *v.* Backdahl	778
*Grus, Jr., *v.* Eynon	780
Decision of the Commissioner of Patents affirmed, *Maremont *v.* Olson	406
Reduction to practice, delay in filing application, Maremont *v.* Olson	405
Process carried out with experimental model not reduction to practice, doubt existing as to commercial practical working, Haley *v.* Du Rell	776
Suits for infringement, party conducting defense for defendant not required to become party of record, but is bound by and entitled to benefit of judgment, ᵇ Van Kannel Revolving Door Co. *v.* Winton Hotel Co	406
Terminology, "air-draft," *ex parte* Teale	595
Trade-marks, descriptive mark not registrable, disclaimer of integral part of mark not permissible, **in re* Scholl Manufacturing Company, Inc	599
Public insignia, "U. S." refused registration, meaning too clearly established, **in re* United States Rubber Company	211
The words "White Lily," for coffee, canceled because of similarity of the words "Lily White," *R. H. Macy & Company *v.* New York Grocery Company	596

DIGEST

OF THE

DECISIONS OF THE COMMISSIONER OF PATENTS AND OF THE UNITED STATES COURTS.

JULY, 1920.

[The decisions of the United States District Court are indicated by the letter [b], of the Court of Appeals of the District of Columbia by a star (*), and of the United States Circuit Court of Appeals by the letter [d].]

ABANDONED EXPERIMENTS.

1. INTERFERENCE—DELAY.
A party must be judged by his conduct rather than by what he says afterward were his intentions. Where G. alleges that he constructed a device in March, 1913, and tested it shortly thereafter by placing it in a car for a week, after which it was removed and taken to a party for the purpose of having dies made, where it remained until 1917, and that this test was so satisfactory that he did not think it necessary to test two other devices made in August, 1914, and August, 1915, respectively, but he further testifies that three other devices were made in 1916, and that several thousand devices constructed in accordance with these models were made and sold, but no application for the invention was filed until June, 1916, although three other applications were filed which were not within the issue, *Held* that the evidence indicates that what was done in 1913 amounted only to an abandoned experiment. [Grus, Jr., *v.* Eynon, 775.

2. SAME—REDUCTION TO PRACTICE.
In an interference relating to an oil flotation apparatus and process where a party made laboratory experiments in 1912 in which he employed a glass funnel, a wash-bottle from which to supply water, and a spoon with which to feed ore, by which he could treat about four hundred pounds of ore per day, but did little or nothing thereafter to commercialize his machine and never made any salable commercial article, did not file his application until 1915, but took out another patent in October, 1915, for a different device, *Held* that what was done in 1912 must be considered as merely experimental. [Haley *v.* Du Rell, 776.

ABANDONMENT OF INVENTION.

See Priority of Invention, 1.

ADAPTATION.

See Construction of Specifications and Patents, 2.

AGGREGATION.

See Construction of Claims.

ANTICIPATION.

See Infringement; Particular Patents.

APPEAL TO THE COMMISSIONER OF PATENTS.

REVIEW NOT RESTRICTED TO QUESTIONS PUT IN ASSIGNMENT OF ERRORS.
On appeal to the Commissioner he is not bound to decide merely the specific questions put to him by the assignments of error, because it is his duty to refuse a patent whenever he has an opinion that the patent ought not to be granted, and it is immaterial how he gets the information upon which he bases his opinion.
[*Ex parte* Duncan, 207.

ASSIGNMENTS OF ERROR.

See Appeal to the Commissioner of Patents.

ATTORNEYS.

See Interference; Suits for Infringement.

CANCELATION OF TRADE-MARK REGISTRATION.

See Trade-Marks, 3.

CLAIMS.

See Particular Patents; Terminology.

1. DUPLICATE OR REDUNDANT.
Where an applicant defines the same invention in numerous ways, he not only fails to secure his invention, but he fails to comply with the provision of the law that "he shall particularly point out and distinctly claim the part, improvement * * * which is his invention," and the claims are therefore indefinite. If an applicant writes two claims which define the same invention, then by that very fact he fails to point out his invention.
[*Ex parte* Duncan, 207.

2. REJECTION FOR DUPLICATION.
Duplication of claims invariably leads to indefiniteness, and an entire set of claims should be rejected as indistinct whenever by reason of duplication it is made uncertain what the invention is. The different claims must be on their face obviously different in substance. [Id.

3. INDEFINITENESS.
Claims which are confused by reciting numerous unnecessary limitations and using indefinite terms, making things appear of essence which are not of essence, are indefinite. [Id.

4. DISTINCTIONS.
Where an applicant presents a multiplicity of claims to define a simple invention and many are substantial duplicates of others, it is applicant's duty rather than that of the Examiner to point out how each claim patentably differs from every other one. [Id.

5. REJECTION FOR INDEFINITENESS AND REDUNDANCY.
The statute requires an applicant to so formulate his claims that the experts of the Patent Office may understand definitely what they mean, and the invention must be so distinctly described as to be understood by one ordinarily skilled in the art to which the invention belongs, and where a multiplicity of claims was presented on a simple invention, some of which were inherently indefinite, all of the claims were properly rejected for failure to point out the invention, as required by the law.
[*[d] *In re* Duncan, 211.

CLASS OF MERCHANDISE.

See Trade-Marks, 3.

CONCEPTION OF INVENTION.

See Priority of Invention, 1, 2.

CONFUSION OF THE PUBLIC.

See Trade-Marks, 2.

CONSTRUCTION OF CLAIMS.

1. AGGREGATION—RECORD-TAPE.
Claims for a record-tape for guidance in running a train provided with a standard-speed line and a maximum-allowable-speed line and perforations *Held* not objectionable as aggregations, as they enable the engineer to so regulate his speed as to keep an indicator between the two lines and so indicate at a glance that his instant speed is between the normal and maximum.
[*Ex parte* Duncan, 207.

2. SAME—DIFFERENT REGISTERS MOUNTED IN THE SAME CASING.
Two manually-operated registers adapted to keep a record of the quantity of gas and oil used in an automobile, mounted in the same casing with the ordinary speedometer and odometer, constitute but an aggregation of features, the registers being independent units.
[*In re* Smithey, 211.

CONSTRUCTION OF SPECIFICATIONS AND PATENTS.

See Particular Patents.

1. PIONEER PATENTEE CANNOT PROLONG MONOPOLY BY PATENTING ONE FEATURE OF THE DEVICE.
Where an inventor of an automatically-collapsible revolving door was granted a pioneer patent and insisted upon and obtained a construction so broad that any form of double-acting hinge or of a releasing device was an infringement, he could not prolong his patent monopoly by subsequently obtaining a patent for some one form of double-acting hinge or self-releasing or collapsible device.
[Van Kannel Revolving Door Co. *v.* Winton Hotel Co., 406.

2. INVENTION—ADAPTATION OF IMPROVEMENT IN CHILD'S WAIST TO INFANT'S BAND.
The adaptation of the inelastic reinforcing-tape with tabs of a child's knitted waist, to which buttons are sewed for the purpose of supporting lower garments, to an infant's band designed to support the napkin, the lower garment appropriate to the infant, *Held* devoid of invention. The Ovenshire patent, No. 800,237, *Held* void.
[Minneapolis Knitting Works *v.* Marshall Field & Co., 598.

EXPIRATION OF PATENT.
A construction which was anticipated by a patent and condemned as an infringement of it may be freely made and sold after such patent has expired.
[Van Kannel Revolving Door Co. *v.* Winton Hotel Co., 406.

INTERFERENCE.

See Abandoned Experiments; Priority of Invention; Reduction to Practice.

EVIDENCE.
Where three patents were granted to a party whose name is the same as that of an applicant involved in interference, and the name of the attorneys in each is the same, and the applicant in the interference testifies that one of these patents was taken out by him, and the description thereof contains a reference to another of these patents, *Held* that it may properly be concluded that the applications were all filed by the same person, although the patents were not introduced into evidence.
[Grus, Jr., *v.* Eynon, 775.

INVENTION.

See Claims; Construction of Specifications and Patents, 2.

PATENTABILITY—SUBSTITUTION OF EQUIVALENTS.
Where a prior-art patent disclosed a device to produce a shower of tobacco and direct it onto a separating means and another patent disclosed a separator to act on granulated tobacco having elements of different specific gravities in which the tobacco was fed from a hopper onto a rapidly-moving belt, which propelled the tobacco against opposing air-currents, the heavier particles being thrown through the current and the lighter ones being deflected by the current, *Held* that it involved no invention to substitute the shower-producing means of the former for the hopper of the latter combination.
[*Ex parte* Teale, 595.

VAN KANNEL—REISSUE No. 14,255—REVOLVING DOOR—ANTICIPATION.
Claims 1, 2, 3, 13, 22, 23, and 24 of the Van Kannel Reissue Patent No. 14,255, for an automatically-collapsible revolving door, *Held* invalid, as anticipated by Patent No. 656,062, issud to the same inventor and now expired.
[Van Kannel Revolving Door Co. *v.* Winton Hotel Co., 406.

PARTIES TO SUIT.

See Suits for Infringement.

PATENTABILITY.

Claims, 4; see Construction of Specifications and Patents, 2; Invention.

INVENTION—ANALOGOUS USE.
The use of a device for separating parts of ground ore is so remote from that of separating the heavier and lighter parts of ground tobacco that the latter might not be suggested by the former.
[*Ex parte* Teale, 595.

PIONEER PATENTS.

See Construction of Specifications and Patents, 1.

PRIOR PATENT.

See Particular Patents.

PRIORITY OF ADOPTION AND USE.

See Trade-Marks, 3.

PRIORITY OF INVENTION.

See Abandoned Experiments.

1. DELAY AFTER ALLEGED REDUCTION TO PRACTICE.
Delay to file an application or practice an invention for more than two years after a doubtful reduction to practice, while not a deliberate abandonment under *Mason* v. *Hepburn* (1898, C. D., 10), indicates such laches as to avoid any advantage flowing from an earlier conception.
[Maremont *v.* Olson, 405.

2. INTERFERENCE.
In an interference between Brown and McIntosh priority awarded to McIntosh as being the first to conceive and constructively reduce to practice.
[Brown *v.* McIntosh, 405.

3. SAME.
Decision of the Assistant Commissioner of Patents awarding priority of invention to Olson affirmed.
[Maremont *v.* Olson, 406.

4. SAME—DILIGENCE LACKING.
Evidence considered and *Held* that Du Rell's early experiments did not amount to a reduction to practice and that as he did nothing thereafter for almost two years, while in the meantime Haley reduced the invention to practice, Haley is entitled to an award of priority.
[Du Rell *v.* Haley, 778.

5. SAME—DILIGENCE.
In considering the bearing of experiments made to perfect an invention on the question of diligence the test is not whether such experiments led to anything as far as benefiting the public is concerned, but whether such tests were so unnecessary as to constitute evidence of bad faith. An inventor is to be commended rather than condemned for taking reasonable time to perfect his invention. (*Griffin* v. *Swenson*, 13 App. D. C., 135, 142; 89 O. G., 919.)
[Gammeter *v.* Backdahl, 778.

PROCESS AND APPARATUS.

See Abandoned Experiments, 2; Reduction to Practice.

PUBLIC INSIGNIA.

See Trade-Marks.

REDUCTION TO PRACTICE.

See Abandoned Experiments, 2; Priority of Invention, 1, 2.

PROCESS—EXPERIMENTAL MODEL.
The rules governing the reduction to practice of a process are similar to those for the reduction to practice of an apparatus. The process should be performed in a way that leaves no doubt as to its commercial practical working. *Held*, therefore, that a process carried out with an experimental model was not a reduction to practice.
[Haley *v.* Du Rell, 776.

REGISTRATION OF TRADE-MARKS.

See Trade-Marks 1, 3, 5.

REISSUES.

See Particular Patents.

REJECTION OF CLAIMS.

See Claims, 2, 5.

SIMILARITY OF TRADE-MARKS.

See Trade-Marks, 2.

STATE OF THE ART.

See Invention.

SUBSTITUTION OF EQUIVALENTS.

See Invention.

SUITS FOR INFRINGEMENT.

JUDGMENT—PATENTS.
A corporation, employing counsel appearing for defendant in a patent infringement suit and conducting the defense at its own cost and expense is a privy to any judgment rendered and bound thereby, but was not required to become a party to the record.
[Van Kannel Revolving Door Co. *v.* Winton Hotel Co., 406.

TERMINOLOGY.

CLAIMS—"PROPELLING MEANS."
The objection that an air-draft is not a "propelling mechanism" *Held* to be not well taken, as an air-draft is a well-known propelling means and is recognized as an equivalent of a strictly structural propelling means.
[*Ex parte*, Teale 595.

TEST.

See Abandoned Experiments, 1; Priority of Invention, 5.

TRADE-MARKS.

1. PUBLIC INSIGNIA—"U. S." NOT REGISTRABLE.
The meaning of "U. S." is too clearly established to permit of registration of any mark containing it as the most prominent feature in view of the provisions of section 5 of the Trade-Mark Act of 1905, denying registration to any mark which "consists of or comprises the flag or coat of arms or other insignia of the United States, or any simulation thereof, or of any State or municipality, or of any foreign nation."
[*In re* United States Rubber Company, 211.

2. "WHITE LILY"—"LILY WHITE"—SIMILARITY.
"White Lily" and "Lily White" are so similar as to be likely to lead to confusion.
[*R. H. Macy & Company v. New York Grocery Company, 506.

3. SIMILARITY OF GOODS—COFFEE AND TEA.
Registration of the words "White Lily" for coffee canceled in view of the prior use of "Lily White" on tea and other groceries, the goods, although different in themselves, being used for the same purpose. [*Id.

4. DESCRIPTIVE.
A mark for instep-supports consisting of a representation of the outline of a shoe broken away at the bottom and disclosing at the portion broken away an arch-support supported by the thumb, index and middle fingers of a hand, *Held* merely descriptive; *Held* also that even if it were permissible to disclaim the representation of the arch-support it would still be descriptive.
[*In re* Scholl Manufacturing Company, Inc., 500.

5. REGISTRABILITY.
Registration of a mark for instep-supports consisting of a representation of the outline of a shoe broken away at the bottom and disclosing at the portion broken away an arch-support supported by the thumb, index and middle fingers of a hand, *Held* not registrable upon disclaimer of the representation of the arch-support, because what is left would not be the mark which had been used and because the remaining part of the mark is also descriptive.
[*Id.

6. EVIDENCE OF EXTENSIVE USE.
Evidence of extensive use of a mark or that several traders have not heard of its use by others does not tend to prove in the least that it is not descriptive. [*Id.

VOID PATENTS.

Batchelor, Jamie H., assignor to C. Espy, Savannah, Ga. Vaporizer. No. 1,347,435; July 20; v. 276; p. 537.
Bateman, Samuel L., assignor of one-half to G. A. Lobsitz, Newark, N. J. Sieve. No. 1,347,489; July 27; v. 276; p. 604.
Baudisch, Hans, Vienna, Austria, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Hydraulic process of and apparatus for converting energy. No. 1,347,578; July 27; v. 276; p. 622.
Bauersfeld, Walther, assignor to Firm of Carl Zeiss, Jena, Germany. Telemeter. No. 1,347,571; July 27; v. 276; p. 620.
Baule, Marie E. A., Lyon, France. Electric impulsion-motor. No. 1,347,002; July 20; v. 276; p. 451.
Baum, David, Livermore Falls, Me. Glove-turning machine. No. 1,348,077; July 27; v. 276; p. 722.
Baumann, Karl, Urmston, England, assignor to The British Westinghouse Electric and Manufacturing Company, Limited. Condenser. No. 1,347,436; July 20; v. 276; p. 537.
Baumann, Karl, Urmston, England, H. L. Guy and J. F. F. Winning, Manchester, England, assignors to The British Westinghouse and Electric Company, Limited. Blade for fluid-pressure turbines. No. 1,347,003; July 20; v. 276; p. 452.
Baumgartl, Leroy, Chicago, Ill. Automobile-bumper. No. 1,346,478; July 13; v. 276; p. 289.
Baush Machine Tool Company. (See Cannell, William, assignor.)
Bawden, William. (See Baker, Cloice B., assignor.)
Bayles, Robert A., Stockton, Calif. Ditch-digger. No. 1,346,075; July 6; v. 276; p. 148.
Bayles, Ernest A., and H. Higham, Helsby, England. Electrical condenser. No. 1,346,694; July 13; v. 276; p. 332.
Bayles, Lewis C., and F. M. Slater, Easton, Pa., assignors to Ingersoll-Rand Company, Jersey City, N. J. Roller-bearing construction. No. 1,346,163; July 13; v. 276; p. 226.
Bayless, Isabel L., Washington, D. C. Cooking device. No. 1,345,824; July 6; v. 276; p. 97.
Beach, Charles P., Littleton, N. H. Apparatus for rendering worn bushings usable. No. 1,347,490; July 27; v. 276; p. 604.
Beadle, Blanche E., Springfield, Mass. Hair-support. No. 1,347,987; July 27; v. 276; p. 703.
Beall, Fletcher W., Jr., McCalla, Ala. Spark-plug. No. 1,347,437; July 20; v. 276; p. 537.

Beall, Walter W., Philadelphia, Pa. Strainer. No. 1,345,342; July 6; v. 276; p. 4.
Beardsley, Edson L., assignor to The Loomis Beardsley Mfg. Company, Columbus, Ohio. Valve-grinding tool. No. 1,347,243; July 20; v. 276; p. 498.
Beau, Mathew, Port Colborne, Ontario, Canada. Sleigh. No. 1,345,825; July 6; v. 276; p. 97.
Beaupré, Enid, Albany, N. Y. Game apparatus. No. 1,346,738; July 13; v. 276; p. 340.
Beck, Friedrich C., Seuzach, near Winterthur, Switzerland. Artificial hand. No. 1,347,004; July 20; v. 276; p. 452.
Becker, Robert A., assignor to C. Tremain, Poughkeepsie, N. Y. T, Y, and L connector. No. 1,345,982; July 6; v. 276; p. 130.
Becklund, John A., Centralia, Wash. Steam turbine-engine. No. 1,346,202; July 13; v. 276; p. 253.
Bedard, Joseph, Columbus, Ohio. Protector for windshields. No. 1,345,826; July 6; v. 276; p. 98.
Bedard, Phillas M., Springfield, Mass. Tool-post. No. 1,347,988; July 27; v. 276; p. 703.
Beddingfield, John A., assignor of one-half to R. D. Feagin, Macon, Ga. Automobile-tire rim. No. 1,345,659; July 6; v. 276; p. 65.
Beecher, Milton F. (See Purdy, R. C., and Beecher.)
Beebe, Mary F., Carthage, Ill. Anti-vermin perch. No. 1,347,930; July 27; v. 276; p. 692.
Beetem, Frank G., Washington, D. C. Binding-post. No. 1,346,525; July 13; v. 276; p. 298.
Behrens, Hugo E., Fargo, N. D. Grain-separator. No. 1,346,630; July 13; v. 276; p. 319.
Beidler, George C., Rochester, N. Y. Method of and device for developing films. No. 1,346,780; July 13; v. 276; p. 349.
Beithon, Gilbert G., Bismarck, N. D. Toy. No. 1,345,343; July 6; v. 276; p. 4.
Beitman, Albert B., assignor to The Outlook Company, Cleveland, Ohio. Bracket for windshield-cleaners. No. 1,347,201; July 20; v. 276; p. 480.
Belknap, Charles B. (See McOmber, Loren W., assignor.)
Bell, Robert J., assignor to Bell's Auto Memo Co., Incorporated, Richmond, Va. Memorandum device. No. 1,346,479; July 13; v. 276; p. 289.
Bell, William E., assignor to The Bell Wrench Company, Tulsa, Okla. Ratchet pipe-wrench. No. 1,345,983; July 6; v. 276; p. 130.
Bell Wrench Company, The. (See Bell, William E., assignor.)
Bell's Auto Memo Co. (See Bell, Robert J., assignor.)
Bellamy, Harry T., Oak Park, Ill., and B. T. Sweely, Cicero, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y. Resistance material. No. 1,346,874; July 20; v. 276; p. 426.
Belshaw Engine Co. (See Belshaw, Walter, assignor.)
Belshaw, Walter, assignor of four-fifths to Belshaw Engine Co., Everett, Wash. Planetary eccentric system of gearing. No. 1,347,671; July 27; v. 276; p. 640.
Belz, Edward P., Athens, Wis. Harness trace-chain. No. 1,346,439; July 13; v. 276; p. 281.
Bendix, Vincent, Chicago, Ill. Engine-starter. No. 1,345,576; July 6; v. 276; p. 49.
Bender, George P., New York, N. Y. Flushing device. No. 1,347,318; July 20; v. 276; p. 514.
Benedict, Emory J., and M. C. Frost, Memphis, Tenn. Resilient tire. No. 1,346,695; July 13; v. 276; p. 332.
Benedict, Paul M., New Haven, assignor to The Barnes & Kobert Manufacturing Company, Milldale, Conn. Electric riveting-machine. No. 1,346,631; July 13; v. 276; p. 319.
Benham, Edgar M. (See Benham, William T. and E. M.)
Benham, Edgar M., Norwood, Ohio, assignor, by mesne assignments, to The Mosler Lock Company, Cincinnati, Ohio. Combination-lock. No. 1,345,574; July 6; v. 276; p. 49.
Benham, William T. and E. M., Norwood, assignors, by mesne assignments, to The Mosler Lock Company, Cincinnati, Ohio. Combination-lock. No. 1,345,575; July 6; v. 276; p. 49.
Benjamin Electric Manufacturing Company. (See Benjamin, Reuben B., assignor.)
Benjamin, Maxwell W., *et al.* (See Hadrich, George, assignor.)
Benjamin, Reuben B., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill. Water-tight connection for electrical conductors. No. 1,345,473; July 6; v. 276; p. 29.
Bennet, G. Henry, Springdale, assignor of one-half to W. Hruza, Livingston, Mont. Hay-cocker. No. 1,347,141; July 20; v. 276; p. 478.
Bennett, Alan M., assignor of one-half to C. H. Florandin, Westfield, N. J. Arc-welding generator. No. 1,346,164; July 13; v. 276; p. 226.
Bennett, Charles H., Mount Morris, N. Y. Toothpick-dispensing device. No. 1,345,984; July 6; v. 276; p. 130.
Bennett, Frank S., Philadelphia, Pa. Inner-tube covering for tires. No. 1,346,632; July 13; v. 276; p. 319.
Bennett, Lu Ella, Sutherland, Mont. Stove-leg. No. 1,346,526; July 13; v. 276; p. 298.
Benoit, Leon, and P. F. King, Vancouver, British Columbia, Canada. Wrench. No. 1,347,491; July 27; v. 276; p. 604.
Benson, Ralph W. (See Lacerda, Harry A., assignor.)
Bentzel, David E., York, Pa. Gate. No. 1,347,438; July 20; v. 276; p. 537.
Bergen, Harry S., Toledo, Ohio, assignor, by mesne assignments, to Toledo Scale Company, Newark, N. J. Automatic scale with price and weight printing attachment. No. 1,347,572; July 27; v. 276; p. 621.
Bergeron, Arthur J., New York, N. Y. Rope-lock for pulleys. No. 1,346,696; July 13; v. 276; p. 332.
Bergman, Simon, New York, N. Y. Carton for cups and similar articles. No. 1,346,792; July 13; v. 276; p. 352.
Bergve, Einar, Notodden, assignor to Norsk Hydro-Elektrisk Kvaelstofaktieselskab, Christiania, Norway. Decomposition of alkali-metal minerals. No. 1,346,365; July 13; v. 276; p. 266.
Berkshire, William A., Ocheyedan, Iowa. Silo-brace. No. 1,345,985; July 6; v. 276; p. 130.
Bernstein, Peter, Boston, Mass. Portable gas-heater. No. 1,346,587; July 13; v. 276; p. 310.
Bernat, Raoul, Bordeaux, France. Heavy motor-tractor. No. 1,347,244; July 20; v. 276; p. 498.
Bernert, George and J., assignors to Bernert Manufacturing Company, Milwaukee, Wis. Feed-drum for pneumatic elevators. No. 1,346,293; July 13; v. 276; p. 253.
Bernert, Jacob. (See Bernert, George and J.)
Bernert Manufacturing Company. (See Bernert, George and J., assignors.)
Bernhard, Jakob, Hasle, near Ruegsau, and A. Meister, Ruegsau, Switzerland. Pneumatic hammer. No. 1,346,166; July 13; v. 276; p. 227.
Berne, James P., *et al.* (See Shields, George F., assignor.)

Brenner, Richard M., Palisade, N. J. Race-game apparatus. No. 1,346,697; July 13; v. 276; p. 332.
Brensinger, Julius, Fairfield, Conn., assignor to Sanitary Can Machinery Company, Ellsworth, Me. Non-circular-can-cover-lining machine. No. 1,347,463; July 20; v. 276; p. 546.
Bressler, Robert E., Hammond, assignor to O. F. Jordon Company, East Chicago, Ind. Railroad-way construction and maintenance car. No. 1,347,677; July 27; v. 276; p. 641.
Brewer, Donald A., assignor to The Brewer-Titchener Corporation, Cortland, N. Y. Bow-socket. No. 1,347,678; July 27; v. 276; p. 641.
Brewer-Titchener Corporation, The. (See Brewer, Donald A., assignor.)
Brewster, Theodore A., St. Louis, Mo. Street-car truck. No. 1,345,528; July 6; v. 276; p. 40.
Brian, James C., Marbass, N. D. Seat for agricultural implements. No. 1,345,830; July 6; v. 276; p. 98.
Bridges, William H., assignor of one-fourth to M. W. Jennings and one-fourth to S. D. Hart, Cincinnati, Ohio. Cigar-holder. No. 1,347,204; July 20; v. 276; p. 490.
Brigel, Samuel G., assignor to J. M. Haverty, trustee, Pittsburgh, Pa. Method and apparatus for producing a combustible mixture. No. 1,346,935; July 20; v. 276; p. 438.
Briggs, Charles A. (See Cooper, Hamilton A., assignor.)
Bright, Graham, Wilkinsburg, H. F. Holy, Pittsburgh, and H. K. Hardcastle, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company. Control system. No. 1,347,890; July 27; v. 276; p. 684.
Brinker, Samuel N., Minneapolis, Minn. Car-brake. No. 1,346,171; July 13; v. 276; p. 228.
British Westinghouse Electric and Manufacturing Company, The. (See Baumann, Karl, assignor.)
British Westinghouse and Electric Company, The. (See Baumann, K., Guy, and Winning, assignors.)
British Westinghouse Electric and Manufacturing Company, The. (See Guy, Henry L., assignor.)
British Westinghouse Electric and Manufacturing Company, The. (See Scanes, Arthur E. L., assignor.)
Brix, Harold M., assignor to Sharp & Smith, Chicago, Ill. Veterinary float. No. 1,347,933; July 27; v. 276; p. 692.
Brock, Edward J. (See Treichel, A. R., and Brock.)
Brock, Frank P. (See Redman, L. V., Weith, and Brock.)
Brockenbrough, Hugh B. (See Armstrong, L. E., and Brockenbrough.)
Brockhaus, Herman A., Woodward, Okla. Building material. No. 1,348,082; July 27; v. 276; p. 723.
Brokaw-Eden Company. (See Settlage, Rudolph F., assignor.)
Brookfield, Douglas Holloway, London, England. Smelting-furnace. No. 1,346,527; July 13; v. 276; p. 298.
Brooks, J. B., and Company. (See Jenkins, Alexander H., assignor.)
Brown Barotype Company. (See Brown, Herbert E., assignor.)
Brown & Bigelow. (See Kristofek, Frank J., assignor.)
Brown, Carl E., Columbus, Ohio. Oil-burner. No. 1,347,007; July 20; v. 276; p. 452.
Brown, Charles F., South Ridge, Kans. Animal-feeder. No. 1,346,936; July 20; v. 276; p. 438.
Brown, Charles T. (See Hand, Edgar K., assignor.)
Brown, Clement, Birmingham, England. Apparatus for measuring the flow of liquids. No. 1,347,143; July 20; v. 276; p. 479.
Brown, Davis, Bucyrus, Ohio, assignor to R. C. Penfield, Chicago, Ill. Process of and apparatus for molding clay products. No. 1,347,484; July 20; v. 276; p. 546.
Brown, Edward R., Boston, Mass. Apparatus for cooling and dispensing beverages. No. 1,345,746; July 6; v. 276; p. 82.
Brown, Egbert B., assignor to O. W. Fort and H. R. Taylor, Los Angeles, Calif. Vehicle-tire. No. 1,347,679; July 27; v. 276; p. 642.

Brown, Edgar P., Madera, Calif. Grading-machine. No. 1,347,008; July 20; v. 276; p. 453.
Brown, Frederic H., Lebanon, N. H. Dental flask. No. 1,347,205; July 20; v. 276; p. 490.
Brown, Harry M., assignor to Spring Stopper Company, Brooklyn, N. Y. Glass-severing implement. No. 1,346,528; July 13; v. 276; p. 298.
Brown, Herbert E., Sterling, Ill., assignor, by mesne assignments, to Brown Barotype Company, Chicago, Ill. Barotype-machine. No. 1,345,660; July 6; v. 276; p. 65.
Brown, Horace P. (See Johnston, Clarance L., assignor.)
Brown, James D., Glasgow, Scotland. Display-rack. No. 1,345,831; July 6; v. 276; p. 98.
Brown, Joseph F., Wichita, Kans. Air or water pressure tank. No. 1,347,934; July 27; v. 276; p. 692.
Brown, Michael, New York, N. Y. Sadiron. No. 1,345,989; July 6; v. 276; p. 131.
Brown, Newman T., Seattle, Wash. Motor-car signal. No. 1,347,246; July 20; v. 276; p. 499.
Brown, Orlando W., Jr., Sanford, Me. Stepladder. No. 1,345,990; July 6; v. 276; p. 131.
Brown, Patrick B., Shenandoah, Pa. Power mine-shovel. No. 1,345,991; July 6; v. 276; p. 131.
Brown, Peter D., Kingston, Ontario, Canada. Violin-peg. No. 1,347,613; July 27; v. 276; p. 628.
Brown, Robert, Montrose, Colo. Spark-arrester. No. 1,347,680; July 27; v. 276; p. 642.
Brown, William D., Somerset, Ky. Shock-absorber. No. 1,346,739; July 13; v. 276; p. 340.
Brown, William R. (See Propert, T. G., and Brown.)
Brown, William R., assignor to A. Mueller, trustee, Decatur, Ill. Drilling-machine. No. 1,347,614; July 27; v. 276; p. 629.
Browning, George, Chicago, Ill. Safety-razor. No. 1,346,294; July 13; v. 276; p. 253.
Bruce, William J., Sterling, Ill. Demountable rim for automobile-wheels. No. 1,347,144; July 20; v. 276; p. 479.
Buch, Royer S., York, Pa. Flask-bar. No. 1,347,574; July 27; v. 276; p. 621.
Buckeye Traction Ditcher Company, The. (See Krupp, Leo A., assignor.)
Buckminster, Ira C., Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J. Cutting-machine. No. 1,347,615; July 27; v. 276; p. 629.
Brummett, William S., and E. C. Reed, Pawhuska, Okla. Key-anchor. No. 1,347,773; July 27; v. 276; p. 661.
Brundidge, J. P., *et al.* (See Tullis, John T., assignor.)
Brunelli, Tito L., Clearfield, Pa. Electrical fire-lighting attachment for stoves. No. 1,346,698; July 13; v. 276; p. 332.
Bruns, Richard E., Chicago, Ill. Sealing-cap. No. 1,346,112; July 13; v. 276; p. 217.
Bruyere, Mose, Green Bay, Wis. Crutch and cushion-tip therefor. No. 1,347,320; July 20; v. 276; p. 514.
Bryan, Daniel R., Chatham, N. J.; F. J. Bryan, administrator. Apparatus for sorting heterogeneous materials. (Reissue.) No. 14,917; July 20; v. 276; p. 546.
Bryan, Francis J., administrator. (See Bryan, Daniel R.) (Reissue.)
Bryden, James. (See Jones, A. W., Bryden, and Mowbray.)
Buckham, George T. (See Dawson, A. T., and Buckham.)
Buckingham, Fremont H., assignor to The Standard Computing Scale Company, Detroit, Mich. Scale. No. 1,347,206; July 20; v. 276 p. 490.
Buckwalter, Leon G. (See Hutchinson, Morton C., assignor.)
Budd, George H., Salt Lake City, Utah. Tire-casing seal. No. 1,347,439; July 20; v. 276; p. 537.
Buddington, Thomas C., assignor of one-half to S. G. Elam, Pasadena, Calif. Drilling-bit. No. 1,347,774; July 27; v. 276; p. 661.
Buess, Theophil. (See Gutzwiller, Herbert, assignor.)
Buford, John H., New Hope, Ala. Furrow-cleaner. No. 1,345,346; July 6; v. 276; p. 4.
Bugbee, Lucian W., and E. D. Tillyer, assignors to American Optical Company, Southbridge, Mass. Illumination. No. 1,346,172; July 13; v. 276; p. 228.
Bugbee, Lucian W., assignor to American Optical Company, Southbridge, Mass. Lens. No. 1,347,319; July 20; v. 276; p. 514.
Bugbee, Lucian W. (See Tillyer, E. D., and Bugbee.)
Buggeln, George W., East Orange, N. J. Scarfpin. No. 1,348,083; July 27; v. 276; p. 723.
Buhoup, Harry C., Chicago, Ill., assignor to The McConway & Torley Company, Pittsburgh, Pa. Coupling-centering mechanism. No. 1,345,529; July 6; v. 276; p. 40.
Buhl, William, Flushing, N. Y., assignor to Bulkrug Machine Corporation. Power-transmitting means. No. 1,347,076; July 20; v. 276; p. 466.
Bulford, Frederick J. S., Maidenhead, England. Artificial limb. No. 1,345,661; July 6; v. 276; p. 65.
Bulkrug Machine Corporation. (See Buhl, William, assignor.)
Bulley, Reginald H., Syracuse, N. Y. Treating metals. No. 1,347,838; July 27; v. 276; p. 673.
Bullock, Fred J., and W. H. Preston, assignors to Papec Machine Company, Shortsville, N. Y. Ensilage-cutter. No. 1,347,493; July 27; v. 276; p. 604.
Bungay, George W., Brooklyn, N. Y., assignor to Acme Die Casting Corporation. Core for casting curved tubular bodies. No. 1,347,575; July 27; v. 276; p. 621.
Bunnell, Rose P., administratrix. (See Bunnell, W. O., and Gates.)
Bunnell, William O., deceased, and Q. A. Gates, Wilkes-Barre, Pa.; R. P. Bunnell, executrix. Electric heater. No. 1,346,793; July 13; v. 276; p. 352.
Bunting Brass & Bronze Company, The. (See Donaldson, Augustus F., assignor.)
Burd, Charles. (See Burd, George and C.)
Burd, George and C., Detroit, Mich. Air-compresser pump. No. 1,346,699; July 13; v. 276; p. 333.
Burger, William J., East Cleveland, and M. E. Lange, assignors to The Warner & Swasey Company, Cleveland, Ohio. Tool or work holding device. No. 1,346,295; July 13; v. 276; p. 253.
Burgess, C. F., Laboratories. (See Weiss, Howard F., assignor.)
Burgi, Herman, assignor of one-half to C. H. Tenney, Springfield, Mass. Automatic gas-pressure regulator. No. 1,346,529; July 13; v. 276; p. 299.
Burke, James W., *et al.* (See Eichorn, Frederick C. H., assignor.)
Burman, Olaf S., Minneapolis, Minn. Boiler-stand. No. 1,346,875; July 20; v. 276; p. 426.
